APPENDIX GLOSSARY OF TERMS 50

INSTRUCTIONS

Why you have been asked to fill out this questionnaire?

The Anti-Dumping Commission (the Commission) is conducting an investigation into precision pipe and tube steel (the goods) exported to Australia from the People's Republic of China (China), the Republic of Korea (Korea), Taiwan and the Socialist Republic of Vietnam (Vietnam).

The Commission will use the information you provide to determine normal values and export prices over the investigation period (the period). This information will determine whether precision pipe and tube steel is dumped. The Commission will also information you provide to determine whether precision pipe and tube steel exported to Australia from Vietnam has been in receipt of countervailable subsidies over the period.

If you do not manufacture the goods

If you play a role in the export of the goods but do not produce or manufacture the goods (for example, you are a trading company, broker, or vendor dealing in the goods), it is important that you forward a copy of this questionnaire to the relevant manufacturers and inform the Commission of the contact details for these manufacturers **immediately**.

The Commission will still require your company to complete this exporter questionnaire except Section G – Cost to make and sell.

What happens if you do not respond to this questionnaire?

You do not have to complete the questionnaire. However, if you do not respond, do not provide all of the information sought, do not provide information within a reasonable time period, or do not allow the Commission to verify the information, we may deem your company to be an uncooperative exporter. In that case the Commission must determine a dumping margin and a subsidy margin having regard to all relevant information.

Therefore, it is in your interest to provide a complete and accurate response to this exporter questionnaire, capable of verification.

Extension requests

If you require a longer period to complete your response to this exporter questionnaire, you must submit a request to the Commission, in writing, for an extension to the due date for all or part of the questionnaire. This request must be made prior to the due date. A request for extension will be rejected if received after the due date.

When considering the extension request, the Commission will have regard to:

- the Commission's responsibility to conduct the case in a timely and efficient manner;
- the reasons why you could not provide a response within the whole period and not only the period remaining between the request and the due date;
- ordinary business practices or commercial principles;
- the Commission's understanding of the relevant industry;
- previous correspondence and previous dealings with your company; and
- information provided by other interested parties.

More information on extensions can be found in the Customs (Extension of Time and Non-cooperation) Direction 2015 at https://www.legislation.gov.au/Details/F2015L01736.

You will be informed of the decision whether your request for an extension has been rejected, granted in full or granted in part. For example, you may be granted an extension to submit all sections except for Section A or you may be granted a shorter extension than you requested.

A summary of any requests and grants of extensions to submit a response to this exporter questionnaire will be published in the public record.

Submitting a response to the exporter questionnaire

Responses to the exporter questionnaire should be lodged by email listed on the cover page. In submitting the response to the exporter questionnaire, you must answer all questions, include all attachments and spreadsheets, and provide a non-confidential version of your response to this exporter questionnaire.

If your response to this exporter questionnaire contains major deficiencies that, in the Commissioner's view, cannot be quickly and easily rectified in a further response, then your company may be deemed as an uncooperative exporter (dumping) and or non-cooperative exporter (countervailing).

Confidential and non-confidential responses

You are required to lodge a confidential version (for official use only) and a non-confidential version (for public record) of your response to this exporter questionnaire by the due date. Please ensure that *each page* of information you provide is clearly marked either "FOR OFFICIAL USE ONLY" or "PUBLIC RECORD".

All information provided to the Commission in confidence will be treated accordingly. The non-confidential version of your submission will be placed on the public record, and must contain sufficient detail to allow a reasonable understanding of the substance of the information, but does not breach confidentiality nor adversely affect those interests.

A person is not required to provide a summary for the public record if the Commission can be satisfied that no such summary can be given that would allow a reasonable understanding of the substance of the information.

All submissions are required to have a bracketed explanation of deleted or blacked out information for the non-confidential version of the submission. An example of a statement to accompany deleted/blacked out text is:

[Explanation of cost allocation through the divisions, by reference to machine hours or weight].

If such an explanation is not provided, the Commission may disregard the information in the submission. Where the public record version of your response to the exporter questionnaire does not contain sufficient detail, your company may be deemed to have significantly impeded the case and be deemed an uncooperative exporter.

Verification of the information that you supply

The Commission may wish to conduct a visit, if this option is available to the Commission, to your company to verify your questionnaire response for completeness, relevance and accuracy.

However, on 20 March 2020, the Commission published *Anti-Dumping Notice No. 2020/029*,[1] advising that onsite exporter verification activities have been temporarily suspended until further notice as a result of the COVID-19 pandemic.

The Commission remains committed to ensuring that data submitted by parties is complete, relevant and accurate. If an onsite visit is not possible, the Commission may elect to undertake alternative verification activities. This includes but is not limited to remote verification, desktop assessments or delaying verification activities until such time as onsite verification is possible. The Commission will continue to monitor current events and assess when the suspension of onsite exporter verification activities can be lifted.

A verification visit, or any verification activity is not meant to be a chance for you to provide new or additional information. The Commission expects your response to the questionnaire to be relevant, complete and accurate.

[1] https://www.industry.gov.au/sites/default/files/adc/public-record/notice_adn_-_adn_2020-029_-temporary_suspension_of_international_onsite_verification_0.pdf

Onsite verification is usually conducted over 4 days, remote and desktop verification may take a longer period of time. In complex cases, a verification visit, if conducted, may be scheduled over 5 days. A desktop verification may require a longer period.

Any verification activity will include a detailed examination of your company's records and we will collect copies of relevant documents. The verification will require the participation of key staff, including your financial accountant, production manager and sales staff. A tour of the manufacturing facility, should an onsite visit be possible, may also be required during the verification visit.

Note that the Commission may disregard any data or information that is not verified, including new or additional information provided after the verification activity.

A report will be prepared following the verification activity, which details the outcomes of the verification. This report will be placed on the public record and may include the publication of the preliminarily-assessed dumping and subsidy margin. The Commission considers that the dumping margin and subsidy margin is not confidential information, but rather an aggregate figure derived from confidential data.

You will be provided with an opportunity to comment on the accuracy and confidentiality of the verification report prior to its publication on the public record.

For information on the Commission's verification procedures, refer to Anti-Dumping Notice No. 2016/30 available on the Commission's website.

Model Control Code

Details of the model control code (MCC) structure for the goods are in the table below. Export sales data (Section B-2), domestic sales data (Section D-2) and cost to make and sell data (Section G-3, G-4 & G-5) submitted in this response must follow this MCC structure. At a minimum, the data must report sales and cost data separately for each of the mandatory MCC categories identified.

	Category	Sub-Category	Identifier	Sales Data	Cost Data
1	**Prime**	Prime	P	Mandatory	Not applicable
		Non-Prime	N		
2	**Steel Base/Type** * Batch Hot Dipped Galvanised abbreviated as 'Batch HDG'; Electro Galvanised abbreviated as 'EG'; Continuously Galvanised abbreviated as 'CG'; Mild Steel Galvabond as 'MSGB'.	Hot Roll	H	Mandatory	Mandatory

		>40 mm to ≤80 mm	2		
		>80 mm to ≤260 mm	3		
9	**Thickness**	<1.6 mm	A	Mandatory	Mandatory
		≥1.6 mm to <3.2 mm	B		
		≥3.2 mm	C		
10	**Length**	≤4 m	1	Mandatory	Optional

		>12.0 m	4		
11	End configuration	Plain end	P	Optional	Optional
		Threaded/flanged/swaged	T		
		Other (e.g. square faced)	O		

In constructing a MCC, use a "-" between each category. For example: **P-H-2-O-1-C-1-N-A-3-P**

The MCCs will be used to model match export models to the identical or comparable domestic models. In addition, the MCCs will be used to determine the profitability of domestic sales in the ordinary course of trade test by comparing domestic selling prices to the corresponding cost to make and sell. The MCC may also be used to compare the export price to the cost to make the exported model as part of the constructed normal value.

If there are models manufactured and sold by your company that do not align within the MCC structure above, this should be raised by lodging a submission with the Commission as soon as is practicable, but no later than the time this questionnaire is due, otherwise the response may be deemed deficient.

The GOV recognizes the market economy for steel and steel products, so it does not impose controls on purchasing price, or selling steel prices and steel products. The steel business enterprises are responsible for their own business results on the principle of "inherit benefits, bear loss".

Regarding the Steel Master Plan in Decision 694/QĐ-BCT dated 31 Jan 2013 mentioned in the application by Orrcon Manufacturing Pty Ltd (Orrcon), the purpose of GOV is to ensure that "Vietnam's steel industry can meet the demand for steel products for the national economy, ensure stable domestic consumption and exports. To develop sustainable and environmentally friendly steel industry"; thereby orienting the production output of steel products, production technologies and distribution planning to develop a long-lasting steel industry. These policies have no impact on price which is established by the forces of supply and demand.

Further, as also stated by Trade Remedies Authority of Vietnam (TRAV) – Ministry of Industry and Trade (MOIT) in their letter dated 20 Jan 2020 sent to the Commission, pursuant to Law on Planning No. 21/2017/QH14 dated 24 Nov 2017, all manufacturing industries, including steel industry, are no longer the subject of master plans developed by the GOV. SECTION I
VIETNAMESE MARKET

I-1 Prevailing conditions of competition in the Vietnamese market

1. Describe the Vietnamese market for the goods and the prevailing conditions of competition within the market, including:

   (a) Provide an overall description of the market in Vietnam which explains its main characteristics and trends over the past five years;

Answer:

The overall market in Vietnam is characterised by robust growth in capacity and increasing numbers of manufacturers of differing sized operations, which has led to strong competitive market conditions.

With the development of industrial, infrastructure and urban construction activities, the demand of steel pipes is growing in Vietnam. In the past 05 years, the consumption of Vietnam's steel pipe market has grown year by year, the consumption in 2019 in the domestic market is approximately 2.4 million tons, while export volume of steel pipe is just 296 thousand tons. Consumption volume in 2019 decreases compared to 2018, domestic sales volume remained almost unchanged with only a slight increase of 0.3%, export volume decreased by 11.4% (source of information: Vietnam Steel Association - VSA).

Please see Exhibit I-1.1 Confidential – Extracts of VSA Newsletter No1.2020.

   (b) Provide the sources of demand for the goods in Vietnam, including the categories of customers, users or consumers of the product;

Answer:

The main source of demand for steel pipe products is residential, industrial and commercial construction sectors. To a lesser extent but not unrelated to construction sectors, precision pipe and tube is also commonly sourced for the transport sector and other building sectors for gates, fencing, handrails and railings.

In Vietnam, there is a great demand for steel pipes used in civil construction, transportation infrastructure and other constructions. In Vietnam market, steel pipe products of factories are mainly supplied to agents, from which agents sell to construction projects, other companies and households.

   (c) Provide an estimated proportion (%) of sales revenue from each of those sources of demand listed in (b);

Answer:

The Company does not have information to provide to the Commission.

   (d) Describe the factors that influence consumption/demand variability in Vietnam, such as seasonal fluctuations, factors contributing to overall market growth or decline, government regulation, and developments in technology affecting either demand or production;

Answer:

The factors affecting consumption/ demand of steel pipes in Vietnam are as follows:

- [*].

(e) Describe any market segmentations in Vietnam; such as geographic or product segmentations;

Answer:

Market segmentations in Vietnam based on geographic area include:

- [*].

(f) Provide an estimated proportion of sales revenue from each of the market segments listed in (e);

Answer:

The Company does not have information to provide to the Commission.

(g) Describe the way in which Vietnamese and imported goods compete in the Vietnamese market;

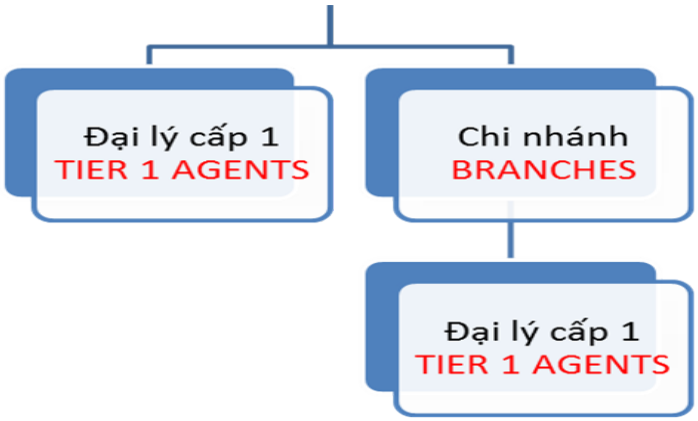
Answer:

There is negligible presence of imported precision pipe and tube in the domestic Vietnamese market, as the market is itself relatively small compared to the broader steel pipe market. To the extent that imports do enter the market, the Company (Hoa Phat Long An Steel Pipe) competes against these in the same manner that it competes against other domestic producers, which is to offer a quality product with reliable service delivery.

In fact, there is no barrier for the imported precision pipe and tube in Vietnam market so the imported and domestic products compete fairly.

(h) Describe the ways that the goods are marketed and distributed in the Vietnamese market; and

Answer:



Being a fairly commoditised product, the subject goods are not required to be marketed to domestic customers, as producers and suppliers are well known to market participants, and quality of products is fairly uniform across the numerous suppliers.

Commonly steel pipes produced by domestic factories are distributed to its branches and agents (tier 1 agents), then the agent sells to the steel pipes to the tier 2 agents or directly to end-consumers (projects, households, etc.).

(i) Describe any other factors that are relevant to characteristics or influences on the Vietnamese market for the goods.

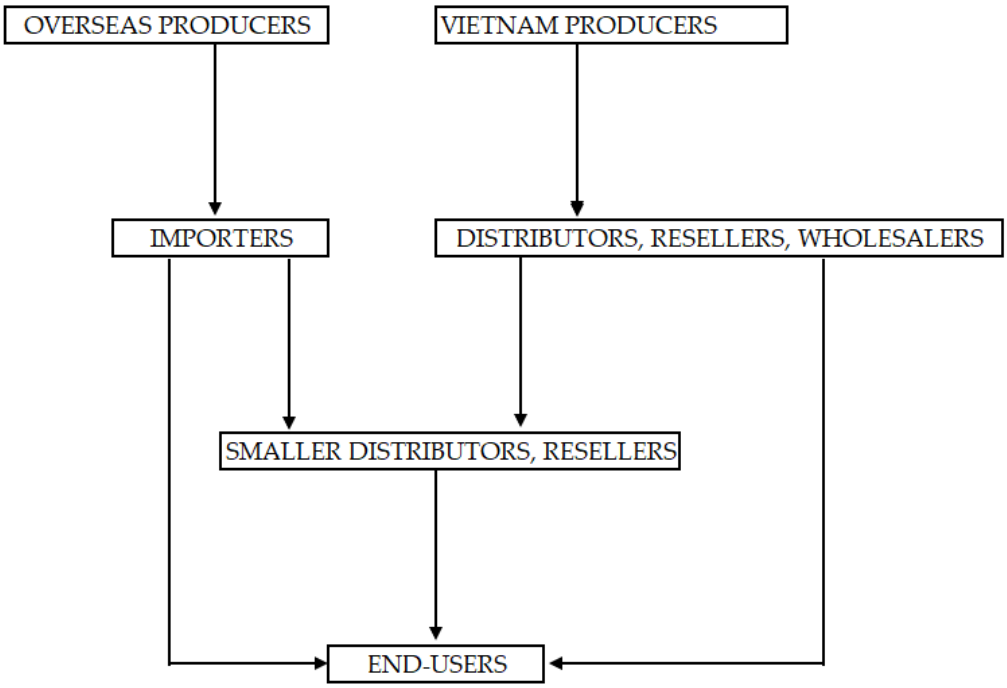
Answer:

There are no other known relevant factors.

Provide documentary evidence to support the responses made to questions 1(a) to (i).

2. Provide a diagram which describes the Vietnamese market structure for the goods, ensuring that all categories of participants are included. In this diagram use linkages to illustrate the different levels of trade and distribution channels within the Vietnamese market.

Answer:



Vietnam's steel pipe market has no barriers to entry, manufacturing companies (of all types of ownership sectors (state-owned, non-state owned, foreign-owned) are free to decide to enter the market. The steel pipe manufacturers fairly compete with each other based on production capacity, product quality, distribution system organization, etc.

Steel pipes produced by factories are mainly distributed to agents by geographical area, and then these agents distribute the products to consumers.

2. Is your organisation/business entity the price leader for the goods in the Vietnamese market? If no, please explain the reasons behind your response and specify the name(s) of the price leaders.

Answer:

No. As steel pipe and tube is a commodity product with little discernible characteristics that differentiate it from one manufacturer to another, there is no real price leader or price setter. Also, as the main raw material (hot-rolled coil (HRC)) represents the vast majority (80-90%) of the cost of the goods, and HRC is itself widely available from numerous sources at competitive prices, there is no real scope for a single manufacturer to become a price leader.

3. Describe the nature of your product pricing (e.g., market penetration, inventory clearance, product positioning, price taker, price maker, etc.) and your price strategies (e.g., competition-based pricing, cost-plus pricing, dynamic pricing, price skimming, value pricing, penetration pricing, bundle pricing, etc.) in Vietnam. If there are multiple strategies applied, please rank these by importance. If there are different strategies for different products, please specify these. Provide copies of internal documents which support the nature of your product pricing.

Answer:

Whilst Hoa Phat does not assess the nature of product pricing using the concepts outlined in the question, it is appropriate to consider Hoa Phat's pricing goal as "cost-plus". This is due to the cost

of producing the subject goods being heavily impacted by the cost of the raw material feedstock (HRC), which accounts for up to 90% of the total cost to make.

4. Explain the process for how the selling prices of the goods for the Vietnamese market by your business are determined. Provide copies of internal documents which support how pricing is determined.

- Domestically produced steel billets and long steel products are like products as those imported into Vietnam.

- Quantity of steel billets and long steel products imported to Vietnam manifests the increase in both absolute and relative terms during the investigation.

- Domestic industry has incurred serious injury such as reduction of market share, capacity, revenue, profits, workforce and increase of inventories in the period 2012 - 2015, especially in 2015.

- The increase of import volume of goods causes serious injury to the domestic industry.

- The China's excess of production capacity and real output associated with the large amount of Chinese steel inventories are considered as "unforeseen developments" and resulted in sudden increase of the import volume of steel billets and long steel products into Vietnam.

7. Subsequent procedures

After the official safeguard measure comes into force, the General Department of Customs shall initiate the collection of import surcharges from taxable goods as prescribed in Section 2 according to the duties specified in Section 3 from countries/territories, excluding countries/territories in the list of Appendix 2.

In case where any organization/individual has reasonable grounds to prove that the Decision on application of such safeguard measure violates regulations of law in force, it/he/she may file a complaint against this Decision in accordance with the Law on complaints No. 02/2011/QH13 dated November 11, 2011.

8. Contact information

PROCEDURES FOR REGISTRATION OF EXEMPTION FROM APPLICATION OF SAFEGUARD MEASURES AGAINST IMPORTERS OF WIRE RODS USED FOR PRODUCING SOLDERING STICKS

Regarding importers of products specified in Part 2 of Section 5: the products are exempted from the application of safeguard measures. For the purposes of enjoying the exemption, the procedures below shall be followed:

- Step 1 (Registration of exemption): Importers of wire rods with HS code 7227.90.00 of a kind used for producing soldering sticks shall send documents on production capacity and the need of material import to the investigation authority (Vietnam Competition Authority of the Ministry of Industry and Trade) and a request for exemption of those products from the application of safeguard measures.

The documents on production capacity must be recognized by the Service of Industry and Trade of the province where the importer has its production premises located (in accordance with Article 13 of Circular No. 12/2015/TT-BCT dated June 12, 2015 on automatic issuance of import permit to some of steel products).

- Step 2 (Verification): Upon receipt of sufficient documents of the importer, the investigation authority shall request the Minister of Industry and Trade to establish a group to verify and assess the importer's documents. A verification visit may be conducted at the importer's premises (if necessary). The investigation authority shall, after the verification, request the Minister of Industry and Trade to consider approving the exemption from application of safeguard measures granted to wire rods with HS code 7227.90.00 of a kind used for producing soldering sticks, and then request the customs authorities to grant the importer an exemption from safeguard duties according to quota monitoring method in accordance with the Decision of the Minister of Industry and Trade. The Minister of Industry and Trade shall issue a decision within 60 days from the date on which sufficient documents of the importer are submitted.

- Step 3 (Periodical report): Any importer producing solder that is eligible for safeguard tariff exemption shall submit quarterly reports on actual imports of wire rods with HS code 7227.90.00 to the investigation authority. If the importer fails to submit the report on schedule to the investigation authority, the Ministry of Industry and Trade may revoke the above decision.

- Step 4 (Post-exemption inspection): The investigation authority may carry out annual inspection of actual yearly production capacity and imports that are exempted from safeguard measures of every importer. The investigation also may conduct irregular inspection of any of those importers if it has reasonable doubts about improper use of the imported products eligible for exemption.

- Step 5 (Actions against violations): If the investigation authority gives a conclusion that imported products eligible for exemption are used improperly, the Ministry of Industry and Trade shall revoke the decision on exemption and the violating importer shall be collected import duty arrears previously exempted as prescribed by law.

Theo quy định tại Điều 13 của Nghị định 150/2003/NĐ-CP ngày 08 tháng 12 năm 2003 quy định chi tiết thi hành Pháp lệnh về tự vệ trong nhập khẩu hàng hóa nước ngoài vào Việt Nam, biện pháp tự vệ được áp dụng đối với hàng hóa nhập khẩu từ tất cả các quốc gia/vùng lãnh thổ khác nhau, ngoại trừ các nước đang phát triển và kém phát triển có lượng xuất khẩu vào Việt Nam không quá 3% tổng lượng nhập khẩu với điều kiện tổng nhập khẩu từ các quốc gia/vùng lãnh thổ này không vượt quá 9% tổng lượng nhập khẩu của Việt Nam. Danh sách các quốc gia/vùng lãnh thổ được miễn trừ áp dụng biện pháp tự vệ được liệt kê tại **Phụ lục 2** của Thông báo này.

5. Thời hạn áp dụng biện pháp tự vệ

Biện pháp tự vệ được áp dụng trong bốn năm kể từ ngày Quyết định áp dụng biện pháp tự vệ tạm thời có hiệu lực.

PUBLIC RECORD

6. Cơ sở áp dụng biện pháp tự vệ

Căn cứ thông tin do các bên liên quan cung cấp và các phân tích tại báo cáo cuối cùng, Cơ quan điều tra đánh giá như sau:

- Ngành sản xuất trong nước là tập hợp những doanh nghiệp sản xuất phôi thép/thép dài trong nước, chiếm hơn 50% tổng sản lượng toàn ngành.

- Phôi thép và thép dài được sản xuất trong nước là hàng hóa tương tự với phôi thép và thép dài được nhập khẩu vào Việt Nam.

- Khối lượng phôi thép và thép dài được nhập khẩu vào Việt Nam tăng cả về mặt tuyệt đối và tương đối trong giai đoạn điều tra.

- Ngành sản xuất trong nước đã chịu thiệt hại nghiêm trọng như giảm thị phần, công suất, doanh thu, lợi nhuận, nhân công và tăng tồn kho trong giai đoạn 2012-2015, đặc biệt là năm 2015.

- Việc gia tăng nhập khẩu là nguyên nhân dẫn đến thiệt hại nghiêm trọng cho ngành sản xuất trong nước.

- Sự dư thừa công suất cũng như sản lượng thực tế kết hợp với lượng tồn kho lớn của các sản phẩm thép của Trung Quốc được xem là "những diễn biến không lường trước" và là nguyên nhân gây gia tăng đột biến lượng phôi thép và thép dài nhập khẩu vào thị trường Việt Nam.

7. Thủ tục tiếp theo

Sau khi biện pháp tự vệ chính thức có hiệu lực, Tổng cục Hải quan Việt Nam sẽ tiến hành thu thuế nhập khẩu bổ sung đối với hàng hóa thuộc đối tượng áp thuế như mô tả tại Mục 2 với các mức thuế theo lộ trình nêu tại Mục 3 ở trên từ tất cả các nước/vùng lãnh thổ, trừ những nước/vùng lãnh thổ thuộc danh sách miễn trừ liệt kê tại **Phụ lục 2.**

Trong trường hợp các tổ chức/cá nhân có căn cứ cho thấy Quyết định áp dụng biện pháp tự vệ này vi phạm các quy định của pháp luật hiện hành, tổ chức/cá nhân có quyền khiếu nại Quyết định này theo Luật Khiếu nại số 02/2011/QH13 ngày 11 tháng 11 năm 2011.

Cơ quan điều tra cũng có thể tiến hành kiểm tra đột xuất các doanh nghiệp được hưởng miễn trừ nếu phát hiện có dấu hiệu cho thấy hàng hóa nhập khẩu được hưởng miễn trừ đã được sử dụng sai mục đích.

- Bước 5 (Xử lí vi phạm): Trường hợp Cơ quan điều tra kết luận sản phẩm được hưởng miễn trừ đã được sử dụng sai mục đích, Bộ Công Thương sẽ thu hồi Quyết định cho phép hưởng miễn trừ và doanh nghiệp sẽ bị truy thu số tiền thuế nhập khẩu đã được miễn trừ theo đúng quy định của pháp luật.

ANNEX II

SUMMARY OF INVESTIGATION DETERMINATIONS

Clause 3 Article 73 of Decree No. 10/2018/ND-CP and Clause 4 Article 81 of Decree No. 10/2018/ND-CP provide regulations on expansion of the scope of application of trade remedies and investigation into evasion of trade remedies. To be specific:

(i) there is no remarkable difference between the subject merchandise and the imports subject to trade remedies;

(ii) there is a remarkable increase in the import volume of the subject merchandise compared to the imports subject to trade remedies. Such remarkable increase in the import volume occurs before or from the date of issuance of the decision on investigation into application of trade remedies;

(iii) domestic production suffers injury or there is a reduced effectiveness of applicable trade remedies.

Based on the analysis of the subject merchandise, trade flows and current production and business status of domestic manufacturers of steel coil and steel wire products, the Ministry of Industry and Trade (the Trade Remedies Authority of Vietnam – the investigating authority) determines that:

1. With regard to the subject merchandise

- There is no remarkable difference between the imported steel coil and steel wire products bearing the following HS codes: 7213.91.90, 7217.10.10, 7217.10.29, 7229.90.99, 9839.10.00, which are subject to the investigation into application of measures against evasion of trade remedies, and the ones to which trade remedies (safeguard measures) are applied.

- With regard to imports bearing HS codes of 7213.99.90, 9839.20.00: The investigating authority determines that the technical characteristics of the imports bearing these HS codes are different from those of the imports to which the safeguard measures are applied and domestically manufactured products because these steel products have a circular cross-section of ≥ 14 mm in diameter. Thus, the Ministry of Industry and Trade decides to exclude the steel products bearing these HS codes from the application of measures against evasion of trade remedies.

The investigating authority determines that the steel coil and steel wire products subject to the investigation into evasion of trade remedies are like to and competitive directly with domestically manufactured steel coil and steel wire products. However, the investigating

PUBLIC RECORD

authority determines that some of the imports subject to the investigation into evasion of trade remedies cannot be produced domestically (including but not limited to high-quality steel products and rolled or drawn steel products for use in supporting industries, automotive industry and motorcycle industry) and thus they should be excluded from the application of measures against evasion of trade remedies. Details about such exclusion are provided in Section 2 of this Announcement.

2. With regard to remarkable import volume

There is a remarkable increase in the import volume of the steel coil and steel wire products, which are subject to the investigation into evasion of trade remedies, compared to the import volume of the steel coil and steel wire products to which safeguard measures are applied. Such increase in the import volume occurs after the Minister of Industry and Trade decides to conduct the investigation into the application of safeguard measures to steel coil and steel wire products imported into Vietnam (case SG04). Especially, the import volume of these steel products rapidly and obviously increased immediately after the application of safeguard measures. Hence, the investigating authority determines that some imported steel coil and steel wire products are found to evade trade remedies through their insignificant changes.

3. With regard to impacts of evasion of trade remedies

In order to evaluate impacts of the abovementioned evasion of trade remedies on the domestic production of steel coil and steel wire products, the investigating authority has sent the questionnaires to manufacturers of steel coil and steel wire products in Vietnam. Investigation determinations indicate that the imports subject to the investigation into evasion of trade remedies reduce effectiveness of applicable safeguard measures (in terms of prices and quantities) in the 2016-2018 period.

The investigating authority shall provide investigation determinations (disclosure) for relevant parties of the case.

PHỤ LỤC II

Tóm tắt Kết luận điều tra

Khoản 3 Điều 73 Nghị định 10/2018/NĐ-CP và Khoản 4 Điều 81 Nghị định 10/2018/NĐ-CP quy định việc mở rộng phạm vi áp dụng biện pháp PVTM và điều tra chống lẩn tránh biện pháp PVTM bao gồm các nội dung:

(i) Hàng hóa bị điều tra lẩn tránh có sự khác biệt không đáng kể so với hàng hóa đang áp dụng biện pháp PVTM;

(ii) Khối lượng nhập khẩu hàng hóa bị điều tra lẩn tránh gia tăng đáng kể so với khối lượng nhập khẩu hàng hóa đang áp dụng biện pháp PVTM. Việc nhập khẩu gia tăng đáng kể này diễn ra ngay trước hoặc kể từ ngày có quyết định điều tra áp dụng biện pháp PVTM;

(iii) Thiệt hại của ngành sản xuất trong nước hoặc sự giảm hiệu quả của biện pháp PVTM đang có hiệu lực.

Trên cơ sở phân tích về hàng hóa bị điều tra lẩn tránh biện pháp PVTM, dòng chảy thương mại, tình hình sản xuất kinh doanh của các doanh nghiệp sản xuất thép cuộn, thép dây trong nước, Bộ Công Thương (Cục PVTM - Cơ quan điều tra) kết luận như sau:

1. Về hàng hóa bị điều tra lẩn tránh biện pháp PVTM

- Hàng hóa nhập khẩu bao gồm các mã HS: 7213.91.90, 7217.10.10, 7217.10.29, 7229.90.99, 9839.10.00 là thép cuộn, thép dây bị điều tra áp dụng biện pháp chống lẩn tránh biện pháp PVTM có sự khác biệt không đáng kể so với hàng hóa là thép cuộn, thép dây đang bị áp dụng biện pháp PVTM (biện pháp tự vệ).

- Đối với mã HS 7213.99.90, 9839.20.00: Cơ quan điều tra kết luận hàng hóa nhập khẩu có mô tả thuộc mã HS này có đặc tính kỹ thuật khác biệt với hàng hóa đang áp dụng biện pháp tự vệ và hàng hóa sản xuất trong nước do các sản phẩm thép này có đường kính mặt cắt ngang hình tròn từ 14mm trở lên. Vì vậy, Bộ Công Thương quyết định loại mã HS này khỏi phạm vi áp dụng biện pháp chống lẩn tránh biện pháp PVTM.

Cơ quan điều tra kết luận thép cuộn, thép dây bị điều tra áp dụng biện pháp chống lẩn tránh biện pháp PVTM là hàng hóa tương tự và cạnh tranh trực tiếp với thép cuộn, thép dây được sản xuất trong nước. Tuy nhiên, Cơ quan điều tra xác định trong số hàng hóa nhập khẩu bị điều tra lẩn tránh biện pháp PVTM có một số sản phẩm hiện nay trong nước chưa sản xuất được (bao gồm nhưng không giới hạn ở các loại thép kết cấu chất lượng cao, thép cán kéo phục vụ công nghiệp phụ trợ, công nghiệp ô-tô, xe máy) và do đó cần được loại trừ khỏi phạm vi áp dụng biện pháp chống lẩn tránh biện pháp PVTM. Chi tiết về việc loại trừ được nêu tại Mục 2 của Thông báo này.

2. Về việc nhập khẩu gia tăng đáng kể

PUBLIC RECORD

Lượng nhập khẩu thép cuộn, thép dây bị điều tra lẩn tránh biện pháp PVTM đã gia tăng đáng kể so với lượng nhập khẩu thép cuộn, thép dây đang bị áp dụng biện pháp tự vệ. Việc nhập khẩu gia tăng đáng kể này chỉ diễn ra sau khi Bộ trưởng Bộ Công Thương quyết định điều tra áp dụng biện pháp tự vệ đối với thép cuộn, thép dây nhập khẩu vào Việt Nam (vụ việc SG04). Đặc biệt, việc gia tăng nhập khẩu là đột biến và rõ ràng ngay sau khi biện pháp tự vệ được áp dụng đối với sản phẩm thép cuộn và thép dây. Vì vậy, Cơ quan điều tra kết luận có hành vi lẩn tránh biện pháp PVTM đối với một số sản phẩm thép cuộn, thép dây thông qua việc thay đổi không đáng kể hàng hóa đang bị áp dụng biện PVTM.

3. Về tác động của hành vi lẩn tránh biện pháp PVTM

Để đánh giá tác động của hành vi lẩn tránh biện pháp tự vệ nói trên đến ngành sản xuất thép cuộn, thép dây trong nước, Cơ quan điều tra đã gửi bản câu hỏi đến các doanh nghiệp sản xuất thép cuộn, thép dây tại Việt Nam. Kết quả điều tra cho thấy trong giai đoạn 2016-2018, hàng hóa nhập khẩu bị điều tra lẩn tránh biện pháp PVTM đã làm suy giảm hiệu quả của biện pháp tự vệ (về giá và về lượng) đang được áp dụng.

Kết luận điều tra (bản công khai) được Cơ quan điều tra gửi cho các Bên liên quan trong vụ việc.

Primary uses: Plated steel is used as building materials, for manufacture of automobile parts, partitions, fridge back-frames, computer chassis, ventilation ducts, air conditioner backplates, glazed metal, pipes, lashing belts, furniture, doors, sliders, etc.

Plated steel can also be used as background material for pre-painted galvanised iron (PPGI). Plated steel can be used in various circumstances depending on clients' quality requirement, physical properties, class and uses of products.

Origin of imports: Merchandise on which anti-dumping duty is imposed is imported from or originated in China (including Hong Kong) and Korea.

4.2. Thiệt hại của ngành sản xuất trong nước

Theo kết quả điều tra, đánh giá và phân tích tình hình của ngành sản xuất trong nước, các chỉ số đã cho thấy có sự đe dọa gây thiệt hại nghiêm trọng cho ngành sản xuất trong nước trong thời gian trước mắt, cụ thể như sau:

- Tổng sản lượng sản xuất tôn màu năm 2016 giảm 1.30% so với năm 2015. Trong đó, 2 nhóm sản phẩm: tôn kẽm màu và tôn đen màu trong năm 2016 đều có suy giảm về lượng sản xuất, đặc biệt tôn đen màu giảm 44.77% so với năm 2015. Tuy nhiên, sản lượng sản xuất tôn lạnh màu vẫn tăng 5.95% trong năm 2016.

[1] Các số liệu trong Thông báo này được định dạng theo tiêu chuẩn mặc định của Chương trình Microsoft Office Excel)

PUBLIC RECORD

- Công suất sử dụng của ngành năm 2016 là 53.34%, là mức sử dụng công suất thấp nhất trong giai đoạn 2013-2016.

- Về lượng bán hàng trong nước, tổng lượng bán hàng tôn màu được sản xuất trong nước năm 2016 tăng 8.71% so với năm 2015. So với mức tăng 31.81% của tổng lượng tiêu thụ trên toàn thị trường, lượng bán hàng trong nước đã tăng trưởng thấp hơn so với sức tăng của nhu cầu thị trường.

- Thị phần của ngành sản xuất trong nước sụt giảm liên tục trong giai đoạn 2013-2016, năm 2016 thị phần của ngành sản xuất trong nước là 71.29 (theo index 100), thấp hơn đáng kể so với năm 2013 là 100 (theo index 100).

- Lượng lao động của ngành năm 2016 giảm 1.52% so với năm 2015.

- Bình quân tồn kho tôn màu của ngành sản xuất trong nước cũng có sự gia tăng liên tục qua các năm, trong đó lượng tồn kho năm 2016 tăng 37.88% so với năm 2015 và cao nhất trong giai đoạn 2013-2016.

- Chỉ số về đầu tư của ngành sản xuất trong nước năm 2016 giảm 14.85%, giảm tương đối mạnh so với năm 2015.

4.3. Mối quan hệ nhân quả

Từ thông tin và chứng cứ thu thập được cho thấy có mối liên quan rõ ràng giữa lượng hàng hóa nhập khẩu bị điều tra gia tăng đột biến và sự suy giảm gây ra cho ngành sản xuất trong nước, cụ thể:

- Thị phần của ngành sản xuất trong nước liên tục sụt giảm là hậu quả của thị phần tôn màu nhập khẩu gia tăng đột biến trong giai đoạn điều tra.

- Lượng cầu trong nước liên tục gia tăng và dự đoán sẽ tiếp tục gia tăng trong năm 2016. Điều này cho thấy lượng cầu trong nước không phải là nguyên nhân dẫn tới thiệt hại của ngành sản xuất trong nước.

- Trong giai đoạn 2013-2016, năng suất lao động của sản xuất tôn màu đều tăng cao, cho thấy không phải thiệt hại của ngành sản xuất trong nước đến từ năng suất lao động kém.

- Các yếu tố khác như khoa học công nghệ, chất lượng sản phẩm... của ngành sản xuất trong nước đều ổn định trong thời gian qua và không ảnh hưởng đến thiệt hại của ngành sản xuất trong nước.

4.4. Kết luận của Cơ quan điều tra

Căn cứ thông tin do các bên liên quan cung cấp và các phân tích tại kết luận cuối cùng, Cơ quan điều tra đánh giá như sau:

- Số liệu về ngành sản xuất trong nước được tập hợp từ số liệu của các doanh nghiệp sản xuất tôn màu trong nước chiếm hơn 99% tổng sản lượng toàn ngành.

- Tôn màu được sản xuất bởi các nhà sản xuất trong nước và tôn màu nhập khẩu vào Việt Nam được xác định là hàng hóa tương tự.

- Trong giai đoạn điều tra, khối lượng tôn màu nhập khẩu vào Việt Nam tăng cả về mạ tuyệt đối và tương đối so với sản xuất trong nước.

- Có sự ép giá và kìm giá của hàng hóa nhập khẩu đối với hàng hóa tương tự sản xuất trong nước.

- Ngành sản xuất trong nước bị đe dọa thiệt hại nghiêm trọng về các chỉ số như: sản lượng, công suất, lượng bán hàng trong nước, thị phần, tồn kho, nhân công, đầu tư trong giai đoạn 2013-2016.

5. Kế hoạch điều chỉnh của ngành sản xuất trong nước

Trước những khó khăn do hàng hóa nhập khẩu gây ra, ngành sản xuất trong nước đã xây dựng và triển khai một số kế hoạch điều chỉnh để thích ứng, duy trì việc sản xuất và bán hàng tại thị trường Việt Nam, cụ thể:

5.1. Kế hoạch về thị trường

Ngành sản xuất trong nước đang tập trung thực hiện chính sách bán hàng hợp lý kích cầu, tập trung vào lĩnh vực kinh doanh chính của mình đồng thời xây dựng đồng bộ các lợi thế cạnh tranh cho từng doanh nghiệp. Ngoài ra, với việc củng cố các kênh phân phối rộng khắp cả nước và phát triển kênh phân phối hiện đại, đưa sản phẩm đến tận tay người tiêu dùng; đào tạo, xây dựng lực lượng bán hàng chuyên nghiệp; quảng bá thương hiệu; nâng cao chất lượng sản phẩm tiêu thụ trên cả hai mảng thị trường dân dụng và thị trường dự án. Ngành sản xuất trong nước đang phấn đấu xây dựng

PUBLIC RECORD

niềm tin của người tiêu dùng nội địa vào các sản phẩm có chất lượng tốt với giá cả hợp lý, tuyên truyền người việt Nam ưu tiên dùng hàng Việt Nam, loại trừ hàng giả, đảm bảo chất lượng sản phẩm, tích cực lập lại trật tự thị trường với nhiều nỗ lực tạo ra lợi thế cạnh tranh so với hàng nhập khẩu.

5.2. Kế hoạch về sản xuất

Ngành sản xuất trong nước đang nỗ lực hợp lý hóa các công đoạn sản xuất, nâng cao năng suất và hiệu suất sử dụng thiết bị; sử dụng nhiên liệu thay thế, áp dụng các giải pháp công nghệ để tiết kiệm chi phí, hạ thấp giá thành sản xuất; tìm kiếm nguồn nguyên vật liệu giá rẻ, giảm giá mua nguyên vật liệu bằng cách ký các hợp đồng cung cấp khối lượng lớn và dài hạn.

5.3. Kế hoạch xuất khẩu

Với thực trạng thị trường nội địa bị lấn át bởi lượng hàng hóa nhập khẩu giá rẻ từ Trung Quốc, trong thời gian qua, ngành thép Việt Nam nói chung và ngành sản xuất trong nước nói riêng buộc phải tập trung phát triển trong lĩnh vực xuất khẩu.

Từ nước nhập thép trong khu vực Asean, Việt Nam đã dần trở thành nước xuất khẩu thép mạnh trong khu vực. Với việc Việt Nam tham gia vào Cộng đồng Kinh tế Asean (AEC), ngành thép Việt Nam được ưu đãi về thuế suất, cùng với lợi thế khoảng cách địa lý giúp sản phẩm thép của Việt Nam tăng sức cạnh tranh và chống chọi tốt hơn với thép Trung Quốc khi xuất khẩu vào các nước thành viên AEC.

Bên cạnh đó, ngành sản xuất trong nước kỳ vọng sau khi tham gia Hiệp định Đối tác Xuyên Thái Bình Dương (TPP), lượng thép xuất khẩu sẽ chiếm khoảng trên 50% tổng lượng tiêu thụ (hiện chiếm khoảng 30%). Với phần lớn lượng phôi thép được nhập khẩu từ Hoa Kỳ và Nhật Bản, thép Việt Nam có nhiều cơ hội cạnh tranh hơn khi thâm nhập thị trường các nước thành viên TPP. Tuy nhiên, tình hình thế giới có nhiều phức tạp, nhiều Hiệp định Thương mại tự do đã ký kết nhưng chưa có hiệu lực thực tiễn, dẫn tới việc xuất khẩu còn gặp nhiều khó khăn. Do vậy, ngành sản xuất trong nước luôn ưu tiên cung cấp sản phẩm cho thị trường trong nước, song song với việc hài hòa giữa bán trong nước và xuất khẩu.

6. Hình thức áp dụng biện pháp tự vệ chính thức

Căn cứ Điều 3 Pháp lệnh về Tự vệ, Bộ Công Thương áp dụng biện pháp tự vệ chính thức bằng hạn ngạch thuế quan đối với tôn màu nhập khẩu vào Việt Nam trong 03 (ba) năm kể từ ngày Quyết định áp dụng biện pháp tự vệ có hiệu lực.
