SPECIAL NOTE

Until 1 August 2020, NMI will, upon request, assess new approvals for instruments against either the previous (2004) edition or the current (2015) edition of NMI R 76-1.

Applications for review of an existing approval will be, upon request, assessed against either the previous (2004) edition or the current (2015) edition of NMI R 76-1 until 1 August 2022.

Approvals issued under the previous (2004) edition will be granted a review date of no later than 1 August 2025.

SCOPE

NMI R 76-2:2015 provides the test report format templates for recording the results of tests contained in Annexes A and B of NMI R 76-1:2015 to present the results in a standardised format for approval.

CONTENTS

NMI R 76-2:2015 is comprised of, and identical to OIML R 76-2:2007 (E), *Non-automatic weighing instruments Part 2: Test report format* published by the International Organisation of Legal Metrology (OIML).

VARIATIONS AND INTERPRETATIONS

All references to OIML R 76-1 are to mean NMI R 76-1:2015 *Non-automatic Weighing Instruments Part 1: Metrological and Technical Requirements* – Tests, October 2015.

INTERNATIONAL RECOMMENDATION

OIML R 76-2

ORGANISATION INTERNATIONALE DE MÉTROLOGIE LÉGALE

INTERNATIONAL ORGANIZATION OF LEGAL METROLOGY

Contents

Foreword

The International Organization of Legal Metrology (OIML) is a worldwide, intergovernmental organization whose primary aim is to harmonize the regulations and metrological controls applied by the national metrological services, or related organizations, of its Member States. The main categories of OIML publications are:

- **International Recommendations (OIML R),** which are model regulations that establish the metrological characteristics required of certain measuring instruments and which specify methods and equipment for checking their conformity. OIML Member States shall implement these Recommendations to the greatest possible extent;
- **International Documents (OIML D),** which are informative in nature and which are intended to harmonize and improve work in the field of legal metrology;
- **International Guides (OIML G),** which are also informative in nature and which are intended to give guidelines for the application of certain requirements to legal metrology; and
- **International Basic Publications (OIML B),** which define the operating rules of the various OIML structures and systems.

OIML Draft Recommendations, Documents and Guides are developed by Technical Committees or Subcommittees which comprise representatives from the Member States. Certain international and regional institutions also participate on a consultation basis. Cooperative agreements have been established between the OIML and certain institutions, such as ISO and the IEC, with the objective of avoiding contradictory requirements. Consequently, manufacturers and users of measuring instruments, test laboratories, etc. may simultaneously apply OIML publications and those of other institutions.

International Recommendations, Documents, Guides and Basic Publications are published in English (E) and translated into French (F) and are subject to periodic revision.

Additionally, the OIML publishes or participates in the publication of **Vocabularies (OIML V)** and periodically commissions legal metrology experts to write **Expert Reports (OIML E)**. Expert Reports are intended to provide information and advice, and are written solely from the viewpoint of their author, without the involvement of a Technical Committee or Subcommittee, nor that of the International Committee of Legal Metrology. Thus, they do not necessarily represent the views of the OIML.

This publication – reference OIML R 76-2, Edition 2007 – was developed by Technical Subcommittee TC 9/SC 1 *Non-automatic weighing instruments*. It was approved for final publication by the International Committee of Legal Metrology in 2007 and supersedes the previous edition of R 76-2 (1993).

OIML Publications may be downloaded from the OIML web site in the form of PDF files. Additional information on OIML Publications may be obtained from the Organization's headquarters:

Introduction

The "Type evaluation report", the subject of R 76-2, aims at presenting, in a standardized format, the results of the various tests to which a type of a non-automatic weighing instrument shall be submitted with a view to its approval. These tests are described in Annexes A and B of R 76-1.

All metrology services or laboratories evaluating types of non-automatic weighing instruments according to R 76-1 or to national or regional regulations based on OIML R 76-1 are strongly advised to use this "Type evaluation report", directly or after translation into a language other than English or French. Its direct use in English or in French, or in both languages, is even more strongly recommended whenever test results may be transmitted by the country performing these tests to the approving authorities of another country, under bi- or multi-lateral co-operation agreements. In the framework of the OIML *Certificate System for Measuring Instruments*, and the OIML *Mutual Acceptance Arrangement* (MAA), use of this report format is mandatory, in French and/or in English with translation into the national languages of the countries issuing such certificates, if appropriate.

The "information concerning the test equipment used for type evaluation" shall cover all test equipment which has been used in determining the test results given in a report. The information may be a short list containing only essential data (name, type, reference number for purpose of traceability). For example:

- Verification standards (accuracy, or accuracy class, and no.);
- Simulator for testing of modules (name, type, traceability and no.);
- Climatic test and static temperature chamber (name, type and no.);
- Electrical tests, bursts (name of the instrument, type and no.);
- Description of the procedure of field calibration for the test of immunity to radiated electromagnetic fields.

Note concerning the numbering of the following pages

In addition to a sequential numbering: "R 76-2 page ....." at the bottom of the pages of this publication, a special place is left at the top of each page (starting with the following page) for numbering the pages of reports established following this model; in particular, some tests (e.g. weighing performance) shall be repeated several times, each test being reported individually on a separate page following the relevant format; in the same way, a multiple range instrument shall be tested separately for each range and a separate form (including the general information form) shall be filled out for each range. For a given report, it is advisable to complete the sequential numbering of each page by the indication of the total number of pages of the report.

Non-automatic weighing instruments

Type evaluation report

EXPLANATORY NOTES

Meaning of symbols:

I = Indication
I_n = nth indication
L = Load
ΔL = Additional load to next changeover point
P = $I + ½\ e - \Delta L$ = Indication prior to rounding (digital indication)
E = $I - L$ or = $P - L$ or = $I + ½\ e - \Delta L - L$ = Error
E_c = Corrected error
mpe = Maximum permissible error (absolute value)
EUT = Equipment under test

The name(s) or symbol(s) of the unit(s) used to express test results shall be specified in each form.

For each test, the "SUMMARY OF TYPE EVALUATION" and the "CHECKLIST" shall be completed according to this example:

	PASSED	FAILED
when the instrument has passed the test:	X	
when the instrument has failed the test:		X
when the test is not applicable:	–	–

The white spaces in boxes in the headings of the report should always be filled in according to the following example:

	At start	At max	At end	
Temp.:	20.5		21.2	°C
Rel. h.:				%
Time:				
Bar. pres.:				hPa

where:
Temp. = temperature
Rel. h. = relative humidity
Bar. pres. = barometric pressure (barometric pressure is necessary for the span stability test and when specified by IEC test provisions; in other cases it may be necessary only for class I instruments).

"Date" in the test report refers to the date on which the test was performed.

In the disturbance tests (12.1 through 12.7), faults greater than e are acceptable provided that they are detected and acted upon, or that they result from circumstances such that these faults shall not be considered as significant (see T.5.5.6 in R 76-1); an appropriate explanation shall be given in the column "Yes (remarks)".

Numbers in brackets refer to the corresponding subclauses of OIML R 76-1.

General information concerning the type

16 EXAMINATION OF THE CONSTRUCTION OF THE INSTRUMENT

Use this page to indicate any description or information pertaining to the instrument, additional to that already contained in this report and in the accompanying national type approval or OIML Certificate. This may include a picture of the complete instrument, a description of its main components, and any remark which could be useful for authorities responsible for the initial or subsequent verification of individual instruments built according to the type. It may also include references to the manufacturer.

Description:

Remarks:

CHECKLIST

This checklist has been developed based on the following principles:

- to include requirements that cannot be tested according to tests 1 through 15 above, but that shall be checked experimentally, e.g. the operating range of the tare device (4.6.4), or visually, e.g. the descriptive markings (7.1);
- to include requirements which indicate prohibitions of some functions, e.g. automatic tare device for instruments for direct sales to the public (4.13.3.3);
- to include neither general requirements, e.g. suitability for use (4.1.1.2), nor weights and verification devices, e.g. auxiliary verification devices (4.9);
- not to include requirements that allow functions or devices to be used, e.g. a combined semi-automatic zero-setting and tare device operated by the same key (4.5.4).

This checklist is intended to serve as a summary of the results of examinations to be performed and not as a procedure. The items on this checklist are provided to recall the requirements specified in R 76-1, and they shall not be considered as a substitution to these requirements.

As for non-self-indicating instruments, clause 6 of R 76-1 shall be followed in lieu of this checklist.

The requirements that are not included in this type evaluation report (tests 1-15 and checklist 17) are considered to be globally covered by the type approval or OIML Certificate (e.g. classification criteria [3.2 and 3.3], suitability for application, use and verification [4.1.1.1, 4.1.1.2 and 4.1.1.3]).

For non-mandatory devices, the checklist provides space to indicate whether or not the device exists and, if appropriate, its type. A cross in the box for “existent” indicates that the device exists and that it complies with the definition given in the terminology. When indicating that a device is non-existent, also check the boxes to indicate that the tests are not applicable (see page 5).

If appropriate, the results stated in this checklist may be supplemented by remarks given on additional pages.

17 CHECKLIST

Application no.: ……
Type designation: ……

17.1 All types of weighing instruments except non-self-indicating instruments (6.1-6.9, R 76-1)

Requirement	Testing procedures		PASSED	FAILED	Remarks
		Descriptive markings			
7.1.1	**A.3**	**Compulsory in all cases:**			
		manufacturer's mark or name			
		accuracy class			
(+3.3.1)		maximum capacity, Max, Max_1, Max_2,...			
		minimum capacity, Min			
(+3.3.1)		verification scale interval, e, e_1, e_2, ...			
7.1.2	**A.3**	**Compulsory if applicable:**			
		name or mark of manufacturer's agent			
		serial number			
		identification marks on separate but associated units			
		type approval mark			
		scale interval, d ($d < e$)			
		software identification (if applicable)			
		maximum tare effect, T (subtractive tare only if T ≠ Max)			
		maximum safe load, Lim (if Lim > Max + T)			
		special temperature limits			
		counting ratio			
		ratio between weight platform and load platform			
		range of plus/minus indication			
7.1.3	**A.3**	**Additional markings:**			
		not to be used for direct sales to the public			
		to be used exclusively for:			
		the stamp does not guarantee ..... / guarantees only			
		to be used only as follows:			
3.2		special applications clearly marked (weighings ranges in classes I and II or II and III)			
4.15		near display "not to be used for direct sales to the public" (for instruments similar to those used for direct sales to the public)			
7.1.4	**A.3**	**Presentation of markings:**			
		indelible			
		easily readable			
		grouped together in a clearly visible place			
		Max, Min, e and d (if $d \neq e$) on or near display permanently shown in a clearly visible position			
		possible to seal and apply a control mark/removal will result in destruction			
		markings B and G			
7.1.4 and 7.1.1 B, 7.1.2 G		additional information shown alternatively on a plate or displayed by a software solution either permanently or accessed by a simple manual command			
7.1.5.1	**A.3**	**Instruments with several load receptors and load measuring devices:**			
		identification mark, Max, Min and e of each load receptor on relating load measuring device (Lim and T = + if applicable)			

Requirement	Testing procedures		PASSED	FAILED	Remarks
7.1.5.2	**A.3**	**Separately-built main parts:**			
		identification mark repeated in descriptive markings			
4.1.1.3		**Suitability for verification:**			
		identification of devices which have been subject to separate type examination			
		Verification marks and sealing			
7.2	**A.3**	**Verification mark:**			
		cannot be removed			
		easy application			
		visibility without the instrument to be moved when it is in service			
7.2.2		**Verification mark support or space:**			
		which ensures conservation of the mark			
		for stamp, stamping area ≥ 150 mm^2			
		for self-adhesive type, ø ≥ 15 mm			
4.1.2.4	**A.3**	**Securing of components and preset controls:**			
		location			
		form			
4.1.2.4		**Securing with software means**			
4.1.2.4 a		legal status of the instrument recognizable			
		evidence of any intervention			
4.1.2.4 b		protection against changes of parameters and the reference numbers			
4.1.2.4 c		facilities for affixing the reference number			
4.1.2.5		**Span adjustment device (automatic or semi-automatic):** Existent ☐ Non-existent ☐			
		external influence impossible after securing			
4.1.2.6		**Gravity compensation:** Existent ☐ Non-existent ☐			
		external influence on or access to impossible after securing			
		Documentation			
8.2.1	**A.1**	**Technical information and data:**			
8.2.1.1,		characteristics of the instrument			
3.10.2		specifications of modules			
3.10.2.1		fractions, p_i (modules tested separately)			
3.10.4		specifications of families			
		specifications of components			
8.2.1.2		applicable descriptive documents (according to nos. 1-11)			
5.3.6.1	**A.1**	specific declaration of the manufacturer			
3.9.1.1		limiting value of tilting defined by the manufacturer			
8.2.2	**A.2**	**Examination of:**			
		documents			
		functions (spot checks)			
		test reports from other authorities			
		Indicating device			
4.2.1		**Reading:**			
		reliable, easy and unambiguous			
		overall inaccuracy ≤ 0.2 *e* (analog indication)			
		size, shape and clarity			
		by simple juxtaposition			
4.2.2.1	**A.3**	**Units of:**			
		mass			
		price			

Requirement	Testing procedures		PASSED	FAILED	Remarks
4.2.2.1		**Form of indication:**			
		for one indication, one unit of mass			
		scale interval in the form (1, 2 or 5) × 10^k			
		same scale interval for all indicating devices, printing devices and tare weighing devices			
4.2.2.2		**Form of digital indication:**			
		at least one figure at right			
		Decimal sign:			
		shall maintain its position (scale interval changed automatically)			
		separate at least one figure to the left and all to the right			
		on one line with the bottom of the figures			
		Zero:			
		only one non-significant zero to the right			
		for values with decimal sign, non-significant zero only in third position			
4.2.3		**Limits:**			
		preventing of indication above Max + 9 *e*			
		preventing of indication below zero unless a tare device is in operation (–20 *d* is accepted)			
4.2.4		**"Approximate" displaying device:** Existent ☐ Non-existent ☐			
		scale interval > Max/100 without being smaller than 20 *e*			
4.2.5		**Semi-self indicating instruments:**			
		extension of self-indication range ≤ self-indication capacity			
		Analog indication:			
4.3.1		thickness and length of scale marks			
4.3.2		scale spacing			
4.3.3		limit of movement below zero and above capacity of self-indication			
4.3.4		damping of oscillations of displaying component			
4.4.1		**Changing of digital indication:**			
		after change in load, previous indication not longer than 1 s			
4.4.2		**Stable equilibrium of digital indication:**			
		printed or stored weight values do not deviate more than 1 e from the final weight value			
		zero or tare operations are within their accuracy requirements			
		no printing, data storage, zero-setting, or taring during continuous or temporary disturbance of equilibrium			
4.4.3		**Extended digital indication:** Existent ☐ Non-existent ☐			
		not allowed when there is a differentiated scale division			
		displaying a smaller scale interval only during pressing a key			
		at most, 5 s after manual command			
		prevention of printing while the device is in operation			
4.4.4		**Digital indications other than primary indications:** Existent ☐ Non-existent ☐			
		additional indications do not lead to any ambiguity to primary indications			
		quantities identified by units, symbols, signs or designations thereof			
		weight values (not weighed) shall be clearly identified or			
		display only temporarily on manual command and			
		shall not be printed			
		the inoperative weighing mode is clear and unambiguously recognizable			

Requirement	Testing procedures		PASSED	FAILED	Remarks
4.4.5		**Digital printing:** Existent ☐ Non-existent ☐			
		clear and permanent			
		figures ≥ 2 mm high			
		name or symbol of units to the right of the value			
		above column of values			
		printing impossible when equilibrium not stable			
4.4.6		**Memory storage:** Existent ☐ Non-existent ☐			
		storage, transfer, totalizing, etc. inhibited when equilibrium not stable			
3.4.1		**Auxiliary indicating device (Classes I and II only; not allowed on multi-interval instruments)** Existent ☐ Non-existent ☐			
		If existent, type: rider ☐ interpolation ☐ complementary ☐ differentiated scale division ☐			
		only to the right of decimal sign			
3.4.2		$d < e \leq 10\ d$, $e = 10^k$ kg or $e = 1$ mg for class I with $d < 1$ mg			
		Differences between results			
3.6.3		**Differences:**			
		between multiple indications: ≤ mpe			
		between digital indications and printout: zero			
3.6.4		between two results: ≤ mpe for same load when method of balancing changed (semi-self-indicating)			
3.9.1.1		**Tilting of instrument of class** II, III or IIII			
		a marking on the level indicator shows the limiting value of tilting			
		level indicator fixed firmly in a place clearly visible to the user			
		an automatic tilt sensor releases a display switch-off or other appropriate alarm signal			
		and inhibits the printout and data transmission			
		Zero-setting, -tracking and -indicating Existent / Non-existent			
		Initial zero-setting ☐ ☐			
		Automatic zero-setting ☐ ☐			
		Semi-automatic zero-setting ☐ ☐			
		Non automatic zero-setting ☐ ☐			
		Zero-tracking ☐ ☐			
		Zero-indicating ☐ ☐			
4.5.1		Effect shall not alter Max			
	A.4.2.1	Overall effect of: zero-setting			= %
		zero-tracking			
		initial zero-setting			= %
4.5.2	**A.4.2.3**	**Accuracy:**			
		deviation ≤ 0.25 *e*			
4.5.3		**Multiple range:** Existent ☐ Non-existent ☐			
		effective for greater weighing range (if switching when loaded possible)			
4.5.4		**Control of zero-setting:**			
		separate from that of tare weighing device			
		Semi-automatic zero-setting: functions only			
		in stable equilibrium and			
		if it cancels any previous tare operation			

Requirement	Testing procedures		PASSED	FAILED	Remarks
4.5.5	**A.4.2.2**	**Zero-indicating device (digital indication):**			
		shows deviation ≤ 0.25 *e*			
		not mandatory if auxiliary indicating device or rate of zero-tracking ≥ 0.25 *d*/s			
4.5.6		**Automatic zero-setting:**			
		operates only when equilibrium stable and			
		indication has remained stable below zero at least 5 seconds			
4.5.7		**Zero-tracking:**			
		operates only when indication at zero or			
		at negative net value equivalent to gross zero and			
		equilibrium stable			
		corrections ≤ 0.5 *d*/s			
		when operates after tare, the overall effect may be 4 % of Max			
		Tare devices Existent / Non-existent Tare weighing ☐ ☐ Tare balancing ☐ ☐ Combined zero-setting and tare balancing ☐ ☐ Tare indicating ☐ ☐ Type: Subtractive ☐ Additive ☐			
4.6.1		applicable requirements from 4.1 through 4.4 are fulfilled			
4.6.2		**Tare weighing device:**			
		$d_T = d$			
4.6.3	**A.4.6.2**	**Accuracy:**			
		±0.25 *e* (electronic instruments and instruments with analog indication), $e = e_1$ for multi-interval			
		better than ±0.5 *d* (mechanical instruments with digital indication			
4.6.4		**Operating range:**			
		prevention of operation at its zero effect			
		or below its zero effect			
		prevention of operation above its maximum indicated			
4.6.5		**Visibility of operation:**			
		operation indicated			
		net with sign "NET", "Net", "net" or complete word (digital indication)			
		NET disappears if gross displayed temporarily			
		tare value or letter "T" (mechanical additive tare device)			
4.6.6		**Subtractive tare:**			
		prevention of use above Max or indication that capacity is reached			
4.6.7		**Multiple range:**			
		operation effective in greater weighing ranges if switching when loaded possible			
		tare values are rounded to the scale interval of the actual weighing range which is in operation			
4.6.8		**Semi-automatic or automatic tare:**			
		operation only in stable equilibrium			
4.6.9		**Combined zero/tare:**			
		accuracy (4.5.2)			
		zero indicating device (4.5.5)			
		zero-tracking (4.5.7)			

Requirement	Testing procedures		PASSED	FAILED	Remarks
4.6.10		**Consecutive tare operations:**			
		indicated or printed tare weight values clearly designated (if tare devices operative at the same time)			
4.6.11		**Printing net or gross:**			
		without designation			
		designation: by G or B (gross)			
		by N (only net printed)			
		designation of net and tare by N and T (if net printed with gross and/or tare)			
		instead of G, B, N and T, complete words			
		printing separately net and tare with identification (determined by different tare devices)			
		Preset tare	Existent ☐ Non-existent ☐		
4.7.1		$d_T = d$ or automatically rounded to d			
		transferred from one range to another one with larger e_i, shall be rounded to the latter (multiple range)			
		tare value ≤ Max_1 for the same net weight value (multi-interval) and calculated net value rounded to the scale interval for the same net weight value			
4.7.2		4.6.10 applies			
		cannot be modified/cancelled if tare operated after the preset tare is still in use			
		operates automatically if clearly identified with load			
4.7.3		4.6.5 applies			
		possibility to indicate preset tare			
		if calculated net printed then preset tare value is printed as well			
		4.6.11 applies			
		designation of preset tare by PT or complete word			
		Locking devices	Existent ☐ Non-existent ☐		
4.8.1		**Positions:**			
		only two stable positions			
		weighing only in ‘weigh” position			
4.8.2		positions clearly shown			
		Multiple ranges	Existent ☐ Non-existent ☐		
4.10		**Selection of weighing ranges:**			
		range in operation clearly indicated			
		selection from smaller to greater range possible at any load (manual)			
		selection from smaller to the following greater range (automatic) possible only for load ≥ Max_i of smaller range			
		selection from a greater to a smaller range (manually) or to the smallest range (automatically) only ▪ at no load when zero or negative net value is indicated			
		▪ tare is cancelled automatically			
		▪ zero is set to ±0.25 e_1 automatically			
		Selection between load receptors, transmitting and measuring devices	Existent ☐ Non-existent ☐		
4.11, 4.11.1		compensation for unequal no-load effect			
4.11.2		zero-setting without ambiguity and in accordance with 4.5			
4.11.3		weighing impossible while selection			
4.11.4		combinations easy identifiable			

Requirement	Testing procedures		PASSED	FAILED	Remarks
4.12		**"Plus and minus" comparator instruments**			
4.12.1		**Distinction of zones:**			
		"+" and "–" signs (analog indication)			
		by inscription (digital indication)			
4.12.2		**Scale:**			
		with at least one scale division, $d = e$ on either side of zero and			
		value of $d = e$ shown at either end			
		Mechanical counting instruments with unit weigh receptor			
4.17.1		**Scale:**			
		with at least one scale division, $d = e$ on either side of zero and			
		value of $d = e$ shown on the scale			
4.17.2		**Counting ratio:**			
		shown clearly above each counting platform or			
		each counting scale mark			
4.20		**Modes of operation:**			
		clearly identification of mode which is actually in operation			
		manual switching back to weighing mode in any mode and at any time possible			
		automatic selection of mode only within a weighing sequence			
		automatic switching back to the weighing mode at the end of the weighing sequence			
		zero indication after returning from switch-off condition			
		automatic check of zero position before returning from switch-off condition			

17.2 Instruments for direct sales to the public and price computing and labeling instruments

Requirement	Testing procedures		PASSED	FAILED	Remarks
Miscellaneous checks (direct sales to the public)					
4.5.4		**Combined semi-automatic zero-setting device and semi-automatic tare-balancing device operated by the same key:**			
		not allowed			
4.8.1		**"Preweigh" position:**			
		not allowed			
4.13.10		**Counting ratio:**			
		1/10 or 1/100 (mechanical counting instrument)			
4.13.5		**Impossibility of weighing during:**			
		locking operation			
		adding or subtracting weights			
4.13.7		**Auxiliary and extended indicating device:**			
		not allowed			
4.13.9		**When significant fault has been detected**[1] **(electronic instruments):**			
		visible or audible alarm provided for customer and			
		data transmission prevented			
		until user takes action or cause disappears			
Indication device (direct sales to the public)					
4.13.1, 4.13.6		**Primary indications to both vendor and customer:**			
		two display sets, one vendor- and one customer display: Yes ☐ No ☐			
		one display set for vendor and customer Yes ☐ No ☐			
		weight			
		information about correct zero position			
		tare operation			
		preset tare operation			
		height of numerical figures displayed to the customer ≥ 9.5 mm			
		Instruments to be used with weights:			
		value of weights possible to distinguish			
Zero-setting device (direct sales to the public)					
4.13.2		**Non-automatic zero-setting:**			
		only allowed when operated with a tool			
Tare device (direct sales to the public)					
4.13.3		not allowed on mechanical instrument with weights receptor			
		on instruments with one platform public can see whether: - tare is in use			
		- tare setting is altered			
		only one tare shall be in operation at any given time			
		while tare or preset tare is in operation recalling of gross values is prohibited			
4.13.3.1		**Non-automatic tare:**			
		displacement of 5 mm at most *e*			
4.13.3.2		**Semi-automatic tare:**			
		reduction of value of tare not permitted and			
		canceling of tare effect only if no load on the receptor			
		One of the following condition fulfilled:			
		tare value indicated permanently in a separate display			

[1] Checked by verifying the compliance with documents or by simulating faults; this check does not duplicate the disturbance tests 12.1-12.7.

Requirement	Testing procedures		PASSED	FAILED	Remarks
		indicated with sign "–" when no load on the receptor			
		tare effect cancelled automatically when unloading after net weighing			
4.13.3.3		**Automatic tare:**			
		not allowed			
4.13.4		**Preset tare:**			
		indicated on separate display clearly differentiated from weight display			
		reduction of tare value not permitted and			
		canceling of tare effect only if no load on the receptor			
		impossible to operate if tare device in operation			
		cancelled at the same time as PLU if associated with PLU			
4.13.11		**Self-service instruments:** with one set of scales or displays ☐ two sets of scales or displays ☐			
		instrument has two sets of scales or displays			
		Primary indications shall include the product designation if a ticket is printed			
Price computing instruments and price scales (direct sales to the public)					
4.14 **4.14.1**		Requirements of 4.13 for direct sales to the public are met			
		Supplementary primary indications (4.13.6)			
		unit price			
		price to pay			
		if applicable number, unit price and price to pay for non-weighed articles, price totals			
4.14.2 **4.2** **4.3.1-4.3.3**		**Price scales:**			
		4.2 and 4.3.1-4.3.3			
		error of price scale $\lvert W \times U - P \rvert \leq e \times U$			
4.14.3		**Price computing:**			
		multiplication of indicated weight and unit price as indicated			
		rounding to the nearest interval of price to pay			
		unit price: price/100 g or price/kg			
		Indications of weights, unit price and price to pay visible:			
		while load on load receptor and for at least 1 s after stable weight indication or after any introduction of unit price			
		freezing for ≤ 3 s after removing load and not possible to introduce or change unit price (if indication has been stable before and would otherwise be zero)			
		printing weight, unit price and price to pay			
		Stored in memory:			
		before printing			
		same data not to be printed twice for customer			
4.14.4		**Additional functions for trade and management:**			
		all transactions are printed for customer			
		they shall not lead to confusion			
4.14.4.1		**Prices-to-pay (positive or negative) of non-weighed articles:**			
		weight indication zero or			
		weighing mode inoperative			
		prices shall be shown on price-to-pay display			
		Prices for more than one equal articles:			
		number of articles shown on weight display without being taken for a weight			
		price for one article shown on unit price display			

Requirement	Testing procedures		PASSED	FAILED	Remarks
		supplementary display for number of articles and/or article prices			
4.14.4.2		**Totalization of transactions on one or several tickets:**			
		price total indicated on price-to-pay display and			
		printed accompanied by a special word or symbol and			
		reference to commodities whose prices are totalized if a separate ticket is issued for total			
		all prices-to-pay shall be printed and price total shall be the algebraic sum of these printed prices			
		Totalization of transactions from linked instruments:			
		price-to-pay scale intervals of all connected instruments identical			
4.14.4.3		**Instrument used by several vendors or to serve more than one customer at the same time:**			
		connection between transactions and vendor or customer identified			
4.14.4.4		**Canceling previous transactions:**			
		transaction is already printed: the price-to-pay cancelled shall be printed with comment			
		transaction not yet printed and displayed to customer: transaction clearly differentiated from normal transactions			
4.14.4.5		**Printing additional information:**			
		clearly correlated to transaction and			
		does not interfere with assignment of weight value to unit symbol			
Price labeling instruments					
4.16		requirements 4.13.8, 4.14.3 (paragraphs 1 and 5), 4.14.4.1 (paragraph 1) and 4.14.4.5 are met			
		Display:			
		for weight			
		possibility to verify values of unit price and preset tare during the use of the instrument			
		Printing:			
		prevention of printing below Min			
		labels with fixed values of weight, unit price and price-to-pay allowed provided weighing mode is inoperative			
Mobile instruments used outside					
4.18.1		means to indicate that the limiting value of tilting has been exceeded and to inhibit printout and data transmission			
		automatic zero-setting or tare balancing operation after each moving of the vehicle			
		Weighing window	Existent ☐	Non-existent ☐	
		indication when instrument is not in the weighing window and the printout and data transmission is inhibited			
		equipped with an appropriate protection system if the load measuring device is sensitive to moving or driving influences			
		prevention of wrong weighing results if the cardanic suspension system or load receptor comes into contact with the surrounding frame construction			
4.18.2		**Other mobile instruments not to be used outside** with a leveling device and a level indicator			
		the leveling device shall be operated easily without tools			
		appropriate inscription pointing the user to the necessity of leveling after each movement			

17.3 Electronic weighing instruments

Requirement	Testing procedures		PASSED	FAILED	Remarks
Disturbances					
5.1.1		indication of significant faults in the display does not lead to confusion with other messages			
5.2		**Acting upon significant faults in case 5.1.1 b):**			
		instrument made automatically inoperative[1], or			
		visual or audible indication until user takes action or fault disappears[1]			
Display check					
5.3.1		**Upon switch-on:**			
		signs of indication are active and non-active long enough to be checked by operator			
External equipment					
5.3.6		**Interfaces (mechanical, electrical, logical) do not allow:**			
		▪ functions and measurement data to be inadmissibly influenced by peripheral devices, or other connected instruments, or disturbances			
5.3.6.1		▪ displaying data which could be mistaken for a weighing result			
		▪ falsifying weighing results (displayed, processed, stored)			
		▪ changing adjustment factor or adjusting the instrument (except authorized cases)			
		▪ falsifying displayed primary indications (direct sales)			
5.3.6.2		interfaces that do not fulfill 5.3.6.1 can be secured			
5.3.6.3		interfaces transmit data so that peripheral device can meet requirements			
5.3.6		metrologically relevant functions performed or initiated through the interface meet relevant requirements of R 76-1			

[1] Checked by verifying the compliance with documents or by simulating faults; this check does not duplicate the disturbance tests 12.1-12.7.

17.4 Software-controlled digital devices and instruments

Requirement	Testing procedures		PASSED	FAILED	Remarks
Devices with embedded software				Existent ☐	Non-existent ☐
5.5.1	**G.1**	declaration of the manufacturer that the software: ▪ is used in a fixed hardware and software environment, and			
		▪ cannot be modified or uploaded by any means after securing/ verification			
		the software documentation contains: ▪ description of the legally relevant functions			
		▪ description of the securing means (evidence of an intervention)			
		▪ software identification			
		▪ description how to check the actual software identification			
		the software identification is: ▪ clearly assigned to the legally relevant software and functions			
		▪ provided by the instrument as documented			
Personal computers, instruments with PC components, and other instruments, devices, modules, and elements with programmable or loadable legally relevant software				Existent ☐	Non-existent ☐
5.5.2.2 d	**G.2.1**	the legally relevant software is: ▪ documented with all relevant information			
5.5.2.2 a		▪ protected against accidental or intentional changes			
5.5.2.2 a		evidence of intervention is available until the next verification / inspection			
5.5.2.2	**G.2.2.1**	**Operation system / programs not accessible for the user**			
		description of all commands via keys or interfaces			
		declaration of completeness of commands			
5.5.2.2	**G.2.2.2**	**Operating system / programs accessible for the user**			
		checksum or signature generated over the machine code of the legally relevant software			
		legally relevant software cannot be started if the code is falsified			
	G.2.2.3	**In addition to the cases G.2.2.1 or G.2.2.2**			
		device-specific parameters sufficiently protected			
		audit trail for the protection of the parameters and description			
		some practical spot checks performed			
5.5.2.2 b	**G.2.3**	**Software interfaces**			
		if there is associated software providing other than measuring functions, the legally relevant software part: ▪ is separated from associated software			
		▪ identified			
		▪ cannot be influenced by the associated software			
		program modules of legally relevant software are defined and separated from the modules of associated software by a defined protective software interface			
		protective software interface itself is part of the legally relevant software			
		description and definition of functions of the legally relevant software that can be released via the protective software interface			
		description and definition of parameters that may be exchanged via the protective software interface			

Requirement	Testing procedures		PASSED	FAILED	Remarks
		description of the functions and parameters conclusive and complete			
		each documented function and parameter does not contradict with the requirements of this Recommendation			
		appropriate instructions for the application programmer concerning the protectiveness of the software interface			
5.5.2.2 c	**G.2.4**	**Software identification**			
		the legally relevant software is identified by a software identification			
		the software identification: ▪ covers all program modules of the legally relevant software and the type-specific parameters at runtime of the instrument			
		▪ is easily provided by the instrument			
		▪ can be compared with the reference identification fixed at type approval			
		spot checks whether the checksums (signatures) are generated and work as documented			
		there exists an effective audit trail			
Data storage devices (DSD)					Existent ☐ Non-existent ☐
5.5.3	**G.3.1**	DSD realized with embedded software (examine software acc. to G.1)			Yes ☐ No ☐
		DSD realized with programmable/loadable software (examine software acc. to G.1)			Yes ☐ No ☐
		documentation with all relevant information			
5.5.3.1	**G.3.2**	sufficient storage capacity for the intended purpose			
		data are stored and given back correctly			
		sufficient description of measures to prevent data loss			
5.5.3.2	**G.3.3**	storage of all relevant information necessary to reconstruct an earlier weighing, i.e. gross, net, tare values, decimal signs, units, identifications of the data set, instrument number, load receptor, (if applicable), checksum / signature of the data set stored			
5.5.3.3	**G.3.4**	protection of the stored legally relevant data against accidental or intentional changes			
		protection of the stored legally relevant data at least with a parity check during transmission to the storage device			
		protection of the stored legally relevant data at least with a parity check of a storage device with embedded software (5.5.1)			
		protection of the stored legally relevant data by an adequate checksum or of a storage device with programmable or loadable software (5.5.2)			
5.5.3.4	**G.3.5**	identification and indication of the stored legally relevant data with an identification number			
		record of the identification number on the official transaction medium, i.e. on the print-out			
5.5.3.5	**G.3.6**	automatic storage of the legally relevant data			
5.5.3.6	**G.3.7**	a device subject to legal control prints or displays the stored legally relevant data for verifying
