# NMI R 85-3 Automatic Level Gauges for Measuring the Level of Liquid in Stationary Storage Tanks

Part 3: Report Format for Type Evaluation

#### (OIML R 85-3:2008(E), IDT)

The English version of international standard OIML R 85-3 Automatic Level Gauges for Measuring the Level of Liquid in Stationary Storage Tanks Part 3: Report Format for Type Evaluation is adopted as the identical national standard with the reference number NMI R 85-3 © Commonwealth of Australia 2012

First edition — November 2012

National Measurement Institute Bradfield Road, Lindfield, NSW 2070 PO Box 264, Lindfield, NSW 2070

- T (61 2) 8467 3600
- F (61 2) 8467 3610
- W www.measurement.gov.au

#### 1. SCOPE

NMI R 85-1 & 2 specifies the metrological and technical requirements and test procedures for automatic level gauges for storage tanks. NMI R 85-3 records the results of the tests contained in NMI R 85-1 & 2.

The metrological purpose of tank level measurements is the application in conjunction with tank calibration tables for the determination of liquid volume received from, delivered to, or contained in stationary storage tanks.

#### 2. CONTENTS

NMI R 85-3 is identical to OIML R 85-3:2008 Automatic Level Gauges for Measuring the Level of Liquid in Stationary Storage Tanks. Part 3: Report Format for Type Evaluation published by the International Organisation of Legal Metrology (OIML).

#### 3. VARIATIONS AND INTERPRETATIONS

Please note:

- References to 'this Report Format substitute 'NMI R 85-3'.
- References to 'national regulations' substitute 'the Regulations'.
- References to 'issuing authority' substitute 'National Measurement Institute'.

## Foreword

The International Organization of Legal Metrology (OIML) is a worldwide, intergovernmental organization whose primary aim is to harmonize the regulations and metrological controls applied by the national metrological services, or related organizations, of its Member States. The main categories of OIML publications are:

- International Recommendations (OIML R), which are model regulations that establish the metrological characteristics required of certain measuring instruments and which specify methods and equipment for checking their conformity. OIML Member States shall implement these Recommendations to the greatest possible extent;
- International Documents (OIML D), which are informative in nature and which are intended to harmonize and improve work in the field of legal metrology;
- International Guides (OIML G), which are also informative in nature and which are intended to give guidelines for the application of certain requirements to legal metrology; and
- International Basic Publications (OIML B), which define the operating rules of the various OIML structures and systems.

OIML Draft Recommendations, Documents and Guides are developed by Technical Committees or Subcommittees which comprise representatives from the Member States. Certain international and regional institutions also participate on a consultation basis. Cooperative agreements have been established between the OIML and certain institutions, such as ISO and the IEC, with the objective of avoiding contradictory requirements. Consequently, manufacturers and users of measuring instruments, test laboratories, etc. may simultaneously apply OIML publications and those of other institutions.

International Recommendations, Documents, Guides and Basic Publications are published in English (E) and translated into French (F) and are subject to periodic revision.

Additionally, the OIML publishes or participates in the publication of **Vocabularies** (**OIML V**) and periodically commissions legal metrology experts to write **Expert Reports** (**OIML E**). Expert Reports are intended to provide information and advice, and are written solely from the viewpoint of their author, without the involvement of a Technical Committee or Subcommittee, nor that of the CIML. Thus, they do not necessarily represent the views of the OIML.

This publication - reference OIML R 85-3, edition 2008 (E) - was developed by the OIML Technical Subcommittee TC 8/SC 1 *Static volume and mass measurement*. It was approved for final publication by the International Committee of Legal Metrology in 2008. Together with R 85-1 & 2, edition 2008 (E), this edition supersedes the previous edition of OIML R 85 (Edition 1998).

OIML Publications may be downloaded from the OIML web site in the form of PDF files. Additional information on OIML Publications may be obtained from the Organization's headquarters:

# Automatic level gauges for measuring the level of liquid in fixed storage tanks Part 3: Report Format for type evaluation

## 1 Introduction

This Report Format applies for any kind of electric or electronic level gauge (independent of its technology), but with the exclusion of purely mechanical level gauges. It presents a standardized format for the results of the various tests and examinations, described in Part 2 of this Recommendation, to which a type of an automatic level gauge shall be submitted with a view to its approval based on International Recommendation OIML R 85 (2008).

It is recommended that all metrology services or laboratories evaluating and/or testing types of automatic level gauges according to OIML R 85 or to national or regional regulations based on OIML R 85 use this Report Format, directly or after translation into a language other than English or French. In case of a translation, it is highly recommended to leave the structure and the numbers of the clauses unchanged: in this case most of the contents is also understandable for those who can not read the language of the translation.

It is also recommended that this Report Format in English or in French (or in both languages) be transmitted by the country performing the tests to the relevant authorities of another country, under bior multi-lateral cooperation agreements.

In the practical application of the Report Format, in addition to a cover page by the Issuing Authority, as a minimum clauses A–F (as necessary) shall be included.

## 2 Applicability of this Report Format

In the framework of the OIML Certificate System for Measuring Instruments, and the OIML Mutual Acceptance Arrangement (MAA) applicable to automatic level gauges in conformity with OIML R 85, the use of this Report Format is mandatory.

Implementation of this Report Format is informative with regard to the implementation of OIML R 85-1 & 2 Part 1 in national regulations.

#### **3** Guidance for the application of this Report Format

In case a prescribed test is not relevant for the type of instrument to be tested, the reason why the test is omitted shall be clearly stated in the field "Remarks" (for instance tests related to AC mains supply in the case of an instrument powered by DC mains) or partial testing after modification of a previously tested type.

The number of the report and the page numbers shall be completed in the heading.

The user is free to change the length of the cells (for instance "Remarks") as required in a specific case.

#### 4 Evaluation Report

The format for the Evaluation Report is given on the following pages.

Cover page by the Issuing Authority
