

results at Wallerberdina Station (65%). We have consciously not defined 'broad community support' to a specific percentage because there are a range of factors that need to be considered

FOR OFFICIAL USE ONLY

3. Rationale for Recommending to Proceed

While the ballot result is in the majority at 57 per cent support, it is arguable whether 'broad community support' is evident, measured against earlier results at Wallerberdina Station (65 per cent). During the previous consultation period, Kimba demonstrated 51 per cent support and was not progressed to the next phase. The rationale for proceeding is:

- a. The high participation rate lends credibility to the ballot results, and a clear majority is supportive of progressing the nominations. A decision not to proceed would not respect the views of the majority.
- b. The support has increased since the Department first began engagement in Kimba in 2015.
- c. There is strong neighbour support around the sites, and the Council is supportive of proceeding in the process.
- d. Having alternative sites, from a broader Project perspective, is strategically advantageous given the heritage challenges at Wallerberdina Station.
