NSW, 2065

AEP

Mr Matt Condon Ph: 02 8424 9880 Fax: 02 8424 9885

DSN

Email: matt.condon@Onesteel.com

For this detail, also refer to current case : ADC 254 re imports of GUC from Thailand.

Variable factors have changed> For the period July to December 2013, Stemcor and Kukje have supplied documentary evidence to support changes in the Ascertained Export Prices as follows:-

Period #1: Imports by Stemcor Australia Pty

Ltd during the July-December 2013 period:

Actual Export Price FOB

INCREASE in AEP

Current

.........

A\$

Tonne A\$ Tonne A\$ Tonne(rounded)

The attached Schedule of relevant Kukje shipments during the July to December 2013 period support the claim that the Export prices during that period increased on the current, original A\$ AEP's per tonne, on a shipment by shipment basis.

The supporting schedule also provides the considered Normal value calculations for the DSN's in question. It is the AEP however that has changed for the DSN's.

This supporting schedule is prepared on the same basis as a

application for the previous period which resulted in a

paid. The

is referred to only as a basis for

demonstrating that the data in the attached schedule has proven to be reliable and credible.

Original Documentation in relation to the Schedule is available for the Commission.

Also attached is the data on Australian sales provided by the manufacturer/exporter, Kukje Steel Co. of Korea.

For the 'most' contemporary period, being shipments ex Kukje during the period Jan to July 2014, I have relied on data supplied by the importer-Confidential attachment Both the importer and the exporter are providing further substantiation of the export prices during that period as a application. basis for lodging a Columns 'AB' and 'AC' of the 'Singapore schedule indicate the current AEP and the calculated actual A\$ Export prices. Those export prices continued the trend from the July 2013 to Dec 2013 period in that the export prices have increased as follows: When detailed on basis, the indicative Export prices provided based on the schedule will, based on all previous analysis, be even higher than indicated and thus in the AEP's will be higher. By way of information, the for the most recent importation period The applicant requests the AEP and NV factors reviewed: Supporting evidence; Stemcor and Kukje submit that the supporting evidence is provided by way of the confidential attachments and this data can be substantiated from source documents. 7. Amounts by which the factors have changed The increases in Export prices are detailed as above and on the attached schedules. 8. As indicated, whilst a stand-alone exercise, a more recent for the period is being prepared for lodgemernt 9. Both Stemcor and Kukje claim the changed variable factors have not only resulted in there being NO DUMPING, but also, that these changes are most likely to persist, for example, on the basis of lower HRC cost inputs due the publicly and generally kown downward price movements in the major steel making inputs of iron ore and coking coal. 10. Should the Commission require other 'causes' then please advise accordingly. Kindly refer on for any clatrification or further detail. Thank you for your consideration,

STAUGHTONS PTY LTD
