Ms Andrea Stone
Manager, Operations 2
Anti-Dumping Commission
Customs House
5 Constitution Ave, Canberra ACT 2601

Dear Ms Stone,

While we have submitted information via our international manufacturer [REDACTED] to this investigation, we would like to re-iterate two important points for consideration by the commission. We note that these items may have been raised by other parties in this investigation, however we submit further data and information for your consideration.

Seima Pty Ltd is an Australian company that designs and markets a range of building products to the Australian building and construction industry. Seima products are often Australian designed, however they are predominately manufactured offshore to our stringent quality standards and imported directly by Seima. Seima has developed, paid and has ownership of many of the designs, moulds and dies that are used in the manufacture of its products, including a range of stainless steel sinks.

We would like to draw your attention and consideration to the following two items:

1. Lipped Stand-Alone Laundry Units

Seima Pty Ltd imports and sells items that can be described as Lipped Stainless Steel Standalone Laundry Units.

We import from [REDACTED] a range of Lipped Stand Alone Laundry Units that include a Stainless Steel 'Lipped' laundry sinks, powder coated mild steel cabinet and door, plastic fittings, stainless steel feet and accessories. (refer Attachment A)

The Stainless Steel Lipped Laundry Sinks that is used in this unit is manufactured using Deep Drawn techniques, and has therefore been caught within the scope of this investigation. However it contains a lipped edge which can only be used with its corresponding cabinet.

Seima imports these items as either fully assembled units, or imported as kits to be assembled by [REDACTED] to be returned to Seima as complete units.

Tasman Sinkware do not locally manufacture, nor do they import or sell a similar Lipped Stainless Steel Laundry Unit.

As such, these items cannot be considered "like products" and should be considered an unintended inclusion into this investigation.

We assert that these products should not be covered by this investigation or ruling.

PUBLIC

2. Small Radius Deep Drawn Stainless Steel Sinks

A Small Radius Deep Drawn Stainless Steel sinks is a Deep Drawn sink with a radius of 25mm or less.

Tasman Sinkware do not locally manufacture any Small Radius Deep Drawn Stainless Steel Sinks.

Tasman Sinkware does sell a Small Radius Deep Drawn Stainless Steel Sink under the model name **Oliveri Sonetto** which has a 25mm Small Radius Deep Drawn Stainless Steel Bowl, however this product is part of their International Series.

Tasman Sinkware state that this model is part of the International Collection and that: *"International collection™ Designed and engineered to our specifications and quality standards. Sourced from our international supplier."* (refer Attachment B)

Tasman acknowledges in Attachment B that these products are sourced internationally, and therefore are not produced by any Australian manufacturer.

Furthermore as Tasman has not manufactured Small Radius Deep Drawn Stainless Steel Sinks within Australia either before or during the investigation period, these products should be considered an unintended inclusion in this investigation.

The importation of sinks with a radius of 25mm or less should therefore be excluded from this investigation as Small Radius Deep Drawn Stainless Steel Sinks cannot be considered "like products" and cannot have caused any material damage to Australian industry.

We assert that these products should not be covered by this investigation or ruling.

I look forward to your consideration and response to the above, please contact the undersigned if you require further information.

Yours sincerely,

Jim Segredos
Director
Seima Pty Ltd
