1. SUMMARY AND FINDINGS

1.1. INTRODUCTION

This Termination Report No. 331 (TER 331) has been prepared in response to an application for a countervailing duty notice lodged by OneSteel Manufacturing Pty Ltd (OneSteel).

OneSteel alleges that rod in coils (RIC) exported to Australia from the People's Republic of China (China) at subsidised prices has caused material injury to the Australian industry producing like goods.

This Termination Report sets out the facts on which the Commissioner of the Anti-Dumping Commission (the Commissioner) based his decision to terminate this investigation so far as it relates to a certain exporter.

1.2. FINDINGS

In accordance with subsection 269TDA(2)(b)(ii) of the *Customs Act 1901*¹ (the Act), the Commissioner must terminate the investigation so far as it relates to an exporter or exporters if the countervailable subsidy received by that exporter or exporters in relation to the goods the subject of the application is negligible. The Commissioner is satisfied that countervailable subsidies have been received in respect of the goods exported by Jiangsu Shagang Group Ltd (Shagang) during the investigation period but the amount of countervailable subsidy received by Shagang has never exceeded the negligible level of countervailable subsidisation relevant to China of 2 per cent of the export price of the goods.

Therefore, the Commissioner has decided to terminate, in accordance with subsection 269TDA(2)(b)(ii), the investigation in so far as it relates to Shagang.

1.3. APPLICATION OF LAW TO FACTS

1.3.1. AUTHORITY TO MAKE DECISION

Division 2 of Part XVB of the Act sets out, among other matters, the procedures to be followed and the matters to be considered by the Commissioner in conducting investigations in relation to the goods covered by an application. Section 269TDA describes the circumstances in which the Commissioner must terminate an investigation.

1.3.2. APPLICATION AND INITIATION

On 15 January 2016, OneSteel lodged an application requesting that the then Assistant Minister for Science and Parliamentary Secretary to the Minister for Industry, Innovation and Science publish a countervailing duty notice in respect of RIC exported to Australia from China. On 17 February 2016, the Commissioner initiated this investigation number 331.

¹ A reference to a division, section or subsection in this report is a reference to a provision of the *Customs Act 1901*, unless otherwise specified.

PUBLIC RECORD

Anti-Dumping Notice No. 2016/14 provides further details relating to the initiation of this investigation and is available on the [public record](#) on the Anti-Dumping Commission's (Commission) website at www.adcommission.gov.au.

1.4. PRELIMINARY AFFIRMATIVE DETERMINATION

The Commissioner has not made a preliminary affirmative determination (PAD) under subsection 269TD(1) as the Commissioner was not satisfied that there was sufficient grounds for the publication of a countervailing duty notice. The Commissioner published a status report on 22 February 2016.

1.5. STATEMENT OF ESSENTIAL FACTS

The joint statement of essential facts (SEF) for the investigations (SEF 322 and 331) was placed on the public record on 8 August 2016. In formulating the SEF, the Commissioner had regard to the application concerned, any submissions concerning publication of the notice that were received by the Commission within 40 days after the date of initiation of the investigation and any other matters considered relevant.

SEF 322 and 331 should be read in conjunction with this report and is available on the [public record](#).

1.6. SUBMISSIONS TO SEF 322 AND 331

The Commission received three submissions in response to SEF322 and 331 from the following interested parties:

- The Government of China;
- OneSteel Manufacturing Pty Ltd; and
- Jiangsu Shagang Group.

The Commission has focused on each of the submissions which may have an impact on the treatment of specific programs, and therefore the calculation of subsidy margins to ensure that the exports countervailing margin has been appropriately calculated.

The public version of these submissions can be found on the [public record](#).

2. BACKGROUND

2.1. INTRODUCTION

On 15 January 2016, OneSteel lodged an application requesting that the then Assistant Minister for Science and Parliamentary Secretary to the Minister for Industry, Innovation and Science (the then Parliamentary Secretary) publish a countervailing duty notice in respect of RIC exported from China. On 17 February 2016, the Commissioner initiated investigation number 331.

OneSteel's application alleged that the Australian industry has suffered material injury caused by RIC exported to Australia from China at subsidised prices. Specifically, the applicant claims that the Australian industry had been injured through:

- price depression;
- price suppression;
- price undercutting;
- lost market share;
- lost sales volume;
- loss of revenue;
- loss of profits;
- loss of profitability;
- loss of employment;
- loss of capacity to produce the like goods; and
- loss of assets employed in the production of the like goods.

Anti-Dumping Notice No. 2016/14 provides further details relating to the initiation of this investigation and is available on the [public record](#) on the Commission's website at www.adcommission.gov.au.

2.2. INVESTIGATION TIMELINE

The investigation period is from 1 July 2014 to 30 June 2015.

The injury analysis period has been set from 1 July 2011. The purpose of the injury analysis period is to allow the Commission to identify and examine longer trends in the market for RIC which in turn assist the Commission in its examination of whether material injury has occurred over the investigation period.

2.3. PRELIMINARY AFFIRMATIVE DETERMINATION

The Commissioner has not made a preliminary affirmative determination (PAD) under subsection 269TD(1) as the Commissioner was not satisfied that there was sufficient

PUBLIC RECORD

grounds for the publication of a countervailing duty notice. The Commissioner published a status report on 19 April 2016.²

The status report is available on the [public record](#).

2.4. STATEMENT OF ESSENTIAL FACTS

The Commissioner must, within 110 days after the initiation of an investigation, or such longer period as the relevant decision maker allows, place on the public record a SEF on which the Commissioner proposes to base the recommendations to the relevant decision maker in relation to the application.

The initiation notice for RIC advised that the SEFs for the investigations would be placed on the public record by 6 June 2016. On 6 June 2016, the former Parliamentary Secretary under section 269ZHI extended the deadline for the publication of the SEF to 21 July 2016. On 21 July 2016, the former Parliamentary Secretary under section 269ZHI further extended the deadline for the publication of the SEF to 5 August 2016.

On 5 August 2016, the Commissioner published a Statement of Essential Facts (SEF) in relation to two separate investigations (Rebar: 322 and Rod in Coils: 331). Both cases have the same investigation period and injury analysis period, they relate to the same country, relate to the same applicant, and share a number of alleged subsidy programs.

In the SEF, the Commissioner outlined his finding that one exporter of RIC from China, Shagang, has a negligible subsidy margin and, as such, the Commissioner proposed to terminate the investigation in so far as it related to that exported subject to any submission received in response to the SEF.

SEF 322 and 331 is available on the [public record](#) and should be read in conjunction with this report.

2.5. RELEVANT LEGISLATION

Sub-section 269TDA(2) provides:

If:

- (a) application is made for a countervailing duty notice; and*
- (b) in an investigation, for the purposes of the application, of an exporter to Australia of goods the subject of the application, the Commissioner is satisfied that:*
 - (i) no countervailable subsidy has been received in respect of any of those goods; or*
 - (ii) a countervailable subsidy has been received in respect of some or all of those goods but it never, at any time after the start of the investigation period, exceeded the negligible level of countervailable subsidy under subsection (16);*

² As required under section 6 of the *Customs (Preliminary Affirmative Determinations) Direction 2015*.

PUBLIC RECORD

the Commissioner must terminate the investigation so far as it relates to the exporter.

Sub-section 269TDA(16) provides:

For the purpose of this section, a countervailable subsidy received in respect of goods exported to Australia is negligible if:

- (a) the country of export is not a developing country and the subsidy when expressed as a percentage of the export price of the goods, is less than 1 per cent; or*
- (b) the country of export is a developing country but not a special developing country and the subsidy, when expressed as a percentage of the export price of the goods, is not more than 2 per cent; or*
- (c) the country of export is a special developing country and the subsidy, when expressed as a percentage of the export price of the goods, is not more than 3 per cent.*

3. THE GOODS UNDER CONSIDERATION

3.1. LEGISLATIVE FRAMEWORK

Subsection 269TC(1) requires that the Commissioner to reject an application for a countervailing duty notice if, *inter alia*, the Commissioner is not satisfied that there is, or is likely to be established, an Australian industry in respect of like goods.

In making this assessment, the Commissioner must firstly determine that the goods produced by the Australian industry are 'like' to the imported goods. Subsection 269T(1) defines like goods as:

Goods that are identical in all respects to the goods under consideration or that, although not alike in all respects to the goods under consideration, have characteristics closely resembling those of the goods under consideration.

An Australian industry can apply for relief from injury caused by dumped or subsidised imports even if the goods it produces are not identical to those imported. The industry must however, produce goods that are 'like' to the imported goods.

Where the locally produced goods and the imported goods are not alike in all respects, the Commissioner assesses whether they have characteristics closely resembling each other against the following considerations:

- i. physical likeness;
- ii. commercial likeness;
- iii. functional likeness; and
- iv. production likeness.

3.2. THE GOODS

The imported goods are:

Rod in coils, whether or not containing alloys, that have maximum cross sections of less than 14mm.

The goods covered by the application include all steel rods meeting the above description of the goods regardless of the particular grade or alloy content.

3.3. TARIFF CLASSIFICATION

The goods are currently classified to the following tariff subheadings in Schedule 3 to the *Customs Tariff Act 1995*.

- 7213.91.00 with statistical code 44;
- 7227.90.90 with statistical code 02.

The accurate identification of the tariff classifications assists the Commission in its collection and analysis of trade data for the good. Additionally, if measures are imposed at the conclusion of the investigation these tariff classes assist with the correct implementation of trade measures.

PUBLIC RECORD

3.4. EXCLUSIONS

The goods do not include hot-rolled deformed steel reinforcing bar in coil form, commonly identified as rebar or debar, and stainless steel in coils.

3.5. TARIFF CONCESSION ORDERS

There is currently no TCO applicable to the goods which are the subject of investigation 331.

4. COUNTERVAILING INVESTIGATION

4.1. COUNTERAVAILABLE PROGRAMS

After assessing all relevant information available, the Commission found that there were a number of countervailable subsidy programs that were common to this investigation and investigation 322. These common countervailable subsidies have been assessed collectively.

The Commission found that 138 countervailable subsidy programs were received by exporters of RIC from China.

The findings in relation each program investigated are outlined in Appendix 1.

4.2. SUBMISSIONS FOLLOWING PUBLICATION OF SEF 322 AND 331

In response to SEF 322 and 331, OneSteel submitted that it disagrees with the Commission's assessment of the subsidy margins and the proposal to terminate the investigation insofar as it relates to Shagang. OneSteel provided the following reasons for its disagreement:

- Yonggang and Shagang are related parties as Shagang holds a 25 per cent interest in Yonggang.
- The Commissioner has ignored or overlooked that Shagang is operating within the Zhangjiang Free Trade Zone (ZJG FTZ) and, as such, is entitled to receive countervailable subsidies such as 'Preferential Tax Policies' (OneSteel identified three preferential tax policies), 'Special Function Policies', 'Import tax reduction' (OneSteel identified three programs), and 'Export Tax Rebate' (OneSteel identified five programs).
- A proper amortisation of the benefits across the life cycle of the asset needs to be conducted and allocated in the investigation period.
- OneSteel provided an extract of report on the *Steel Industry Coalition* which identified an amount of total government support received by Shagang group between financial years 2005 to 2013.

In response to OneSteel's claims, Shagang stated that it has not benefitted from preferential tax policies, from a reduced tax rate nor preferential tax policies. Shagang also stated that it has truthfully responded to the Commission's questionnaire and identified all benefits received under the alleged subsidy programs and has self-reported numerous additional benefits received under other potential subsidy programs.

4.3. THE COMMISSION'S ASSESSMENT

Having regard to OneSteel's submission, information provided by Shagang and verified by the Commission, the Commission is satisfied that Shagang is a private entity.

While the Commission acknowledges OneSteel's efforts to identify possible additional subsidy programs, OneSteel did not provide any evidence that Shagang has in fact been in receipt any of the alleged subsidy programs. Further, the Commission notes that most of the alleged programs in OneSteel's submission are outside the investigation period.

PUBLIC RECORD

For projects where the benefit for the alleged subsidy programs continued outside the investigation period, the Commission amortised those benefits across the life cycle of the asset.³ This amortised amount was then allocated in the investigation period where appropriate.

From the examination of Shagang's records during the 'on-the-spot' in-country verification, the Commission did not find any evidence that Shagang was in receipt of any other subsidy programs other than those disclosed in the visit report.

Further, OneSteel has not provided sufficient further evidence that Shagang benefitted from the subsidy programs identified in its submission. These subsidy programs were not identified in its application or during the course of the investigation. Shagang did disclose additional programs to those identified in the application during the course of the investigation, and these programs were not amongst them.

The Commission has undertaken 'on-the-spot' verification of Shagang's records and did not identify any evidence that Shagang benefitted from the programs disclosed in OneSteel's submission.

4.4. THE COMMISSION'S FINDINGS

Having regard to all relevant information, the Commission has found that Shagang was in receipt of the following countervailable subsidy programs:

- Program 3 – Coke provided by government at less than adequate remuneration;
- Program 46 – Preferential loans; and
- Programs 65, 69, 72, 73, 74, 75, 81, 133, 134, 160, 162, 168, 169, 170, 171, 172, 173, 174, 175, 176, 178, 180, 181, 182, 184, 185, 187, 188, 189, 191, 192, 194, 195, 196, 197, 200, 201, 202, 204, 205, 215, 216, 217, 218, 219, 221, 222, 225 and 226 – Miscellaneous grants programs (refer to the tables in s5.1.1 of this report for the full name of each program).

The Commission has determined that the subsidy margin for Shagang is **1.6 per cent**.

The calculation of Shagang's subsidy margin is at **Confidential Attachment 1**.

4.5. CONCLUSION

Under subsection 269TDA(2), if the Commissioner is satisfied that the level of subsidisation is negligible in relation to a particular exporter, the Commissioner must terminate the investigation so far as it relates to that exporter.

Subsection 269TDA(16) sets out the negligible level of countervailable subsidisation for goods exported from China as 2 per cent.

³ The life cycles of an asset was determined using the audited life-cycle as per the audited reports.

PUBLIC RECORD

The Commissioner has determined the subsidy margin for Shagang is 1.6 per cent. Therefore, the Commissioner must terminate the countervailing investigation so far as it relates to RIC exported from China by Shagang.

5. APPENDICES AND ATTACHMENTS

Appendix 1	Countervailable Programs
Appendix 2	Summary of submissions to SEF
Appendix 3	List of submissions to Investigation 331
Appendix 4	Assessment of adequate remuneration programs
Confidential Attachment 1	Calculation of Shagang's Subsidy Margin

6. APPENDIX 1 – COUNTERAVAILABLE PROGRAMS

After assessing all relevant information available, the Commission found that there were a number of countervailable subsidy programs that were common to rebar and RIC. These common countervailable subsidies have been assessed collectively.

The Commission found that 138 countervailable subsidy programs were received by exporters of RIC from China.

The findings in relation each program investigated are outlined in the tables below.

Table 1: Programs common to rebar and rod in coils with common program numbers

Common Program number for rebar and rod in coils	Program Name – rebar and rod in coils	Program Type	Countervailable in relation to the Rebar and rod in coils (Yes/No)
1	Billet provided by the Government of China at less than adequate remuneration	Remuneration	Yes
2	Coking coal provided by the Government of China at less than adequate remuneration	Remuneration	Yes
3	Coke provided by the Government of China at less than adequate remuneration	Remuneration	Yes
4	Electricity provided by the Government of China at less than adequate remuneration	Remuneration	No
5	Preferential Tax Policies for High and New Technology Enterprises	Taxation	Yes
6	Preferential Tax Policies in the Western Regions	Taxation	Yes
7	Land Use Tax Deduction	Taxation	Yes
8	Tariff and VAT Exemptions on Imported Materials and Equipment	Taxation	Yes
9	VAT refund on comprehensive utilisation of resources	Taxation	Yes
10	One-time Awards to Enterprises Whose Products Qualify for “Well-Known Trademarks of China” and “Famous Brands of China”	Grant	Yes
11	Matching Funds for International Market Development for small and medium size enterprises (SMEs)	Grant	Yes
12	Superstar Enterprise Grant	Grant	Yes
13	Research and Development (R&D) Assistance Grant	Grant	Yes

PUBLIC RECORD

Common Program number for rebar and rod in coils	Program Name – rebar and rod in coils	Program Type	Countervailable in relation to the Rebar and rod in coils (Yes/No)
14	Patent Award of Guangdong Province	Grant	Yes
15	Innovative Experimental Enterprise Grant	Grant	Yes
16	Special Support Fund for Non-State-Owned Enterprises	Grant	Yes
17	Venture Investment Fund of Hi-Tech Industry	Grant	Yes
18	Grants for Encouraging the Establishment of Headquarters and Regional Headquarters with Foreign Investment	Grant	Yes
19	Grant for Key Enterprises in Equipment Manufacturing Industry of Zhongshan	Grant	Yes
20	Water Conservancy Fund Deduction		Yes
21	Wuxing District Freight Assistance	Grant	Yes

7. APPENDIX 2 – SUBMISSIONS FOLLOWING THE SEF

7.1. SUBMISSIONS RECEIVED BEFORE PUBLISHING THE SEF THAT WERE CONSIDERED IN THE SEF

For the purpose of the SEF, the Commission considered all submissions received before 1 July 2016. The following submissions were received after this date and were not considered as to do so would have, in the Commissioner’s opinion, prevented the timely placement of the SEF on the public record (as per subsection 269ZHF(3)).

Date received	Interested Party	Subject of submission	EPR no.
05/07/2016	OneSteel	Oral submission – OneSteel’s views on the public body test, pass-through calculations and benchmark prices.	36
21/07/2016	Government of China	Response to Australian Industry Submission.	37
3/08/2016	Government of China	Letter to the Commissioner	43

This issues raised in the above submissions have been resubmitted again by the above interested parties following the publication of the SEF. Therefore, the Commissioner has considered the issues raised in the above submissions together with those submitted following the publication of the SEF.

7.2. SUBMISSIONS RECEIVED FOLLOWING PUBLICATION OF THE SEF

The Commission has received the following submissions in relation to the joint rebar / RIC SEF.

Date received	Interested Party	Subject of submission	EPR no.
30/08/2016	Exporter – Shandong Shiheng Special Steel group Co., Ltd	<p><u>Program 177</u> –SIE that was found to be providing loan guarantee is not a public body;</p> <p>- Misunderstanding of statements made by Shiheng regarding the implications of the guarantees by other third parties; and</p> <p>- Incorrect calculation of the benefit.</p> <p><u>Program 2</u> – benchmark to be adjusted to reflect different types of coking coal</p>	45

Date received	Interested Party	Subject of submission	EPR no.
02/09/2016	Exporter – Shandong Shiheng Special Steel group Co., Ltd	Submission in response to OneSteel's submission	50

7.3. PROGRAMS 177 AND 273

In SEF 322 and 331, the Commission preliminarily determined that one of the Cooperating exporters (Shiheng) may have benefitted from this program (program 177 and program 273) – Loan Guarantee provided by the Government of China.⁴ These programs provide concessional loans to businesses which are not creditworthy. The Commission's determination was based on the explanation provided by the cooperating exporter that it, may not have been able to obtain certain loans without 'government guarantee', and therefore it may be 'uncreditworthy'.

In its response to SEF 322 and 331, Shiheng claims that the SIE that was found to be providing the loan guarantee is not a public body. Shiheng also claims that the Commission misunderstood statements made by Shiheng during the verification visit regarding the implications of the guarantees by other third parties. Additionally, Shiheng claims that there is an error in the calculation of the benefit.

The GOC in its submission to the SEF claims that the Commission's consideration of whether there is a loan guarantee subsidy is flawed, both legally and factually.

7.3.1. THE COMMISSION'S RESPONSE

The Commission has considered the submission made by Shiheng and by the GOC in response to the SEF regarding program number 177.

Having regard to the *Dumping and Subsidies Manual*, the Commission has not found positive evidence that suggests that Shiheng is not creditworthy, which impacts on the assessment of program 177. The manual states:

*where a government makes loans to borrowers who are uncreditworthy - meaning that its financial position is so weak that it can be demonstrated from the evidence that it would not have obtained a commercial loan, the Commission will consider whether the entire loan should be treated as the equivalent of a grant. Claims by Australian industry that a company is uncreditworthy will need to be supported by information about the financial health of the company. Financial indicators include; the ability to meet costs and financial obligations from cash flow; and evidence concerning the enterprise's future financial position using market studies, and project and loan appraisals. The presence of long term loans without any government guarantee may be indicative that an enterprise is not creditworthy.*⁵

⁴ These programs are identical and will be referred to as program 177 for the remainder of this report.

⁵ *Dumping and Subsidy Manual*, page 91

PUBLIC RECORD

The Commission noted that approximately 25 per cent of the total loans provided to Shiheng were not guaranteed. Of the remaining 75 per cent (the guaranteed loans), only 25 per cent were guaranteed by a state owned enterprise (SIE) while the remaining loans were guaranteed by other related and unrelated private entities. This suggests that Shiheng is able to obtain loans that are either not guaranteed or guaranteed by other private entities.

The Commission also examined the audited financial statements for the financial year ending 30 June 2015 and found that Shiheng has the ability to meet costs and financial obligations from cash flow. *Prima facie*, Shiheng's balance sheet indicates that the company is in not in a financial position that would deem it to be *not creditworthy*.

The Commission considers that the evidence supports a finding that Shiheng is credit worthy, and would not require loan guarantees to access debt finance. The Commission has not identified evidence that any guarantees provided by the government confer a benefit within the meaning of subsection 269TACC(3)(c). This program will therefore not be countervailed in respect of rebar and RIC exported to Australia from China.

7.4. PROGRAM 46 – CALCULATION ERROR BY ‘ZEROING’

Hunan Valin claims that the Commission made a calculation error by ‘zeroing’ the benefits calculated for the loan programs. Hunan Valin also claims that the Commission has selected two types of benchmark rates ‘interest rates of peoples Bank of China’ (PBC) and ‘private interest rates’ and takes three scenarios in the benefit margin testing.

The GOC claims that Chinese banks are not public bodies and do not provide alleged interest rate subsidies.

7.4.1. THE COMMISSION'S RESPONSE

The Commission has removed the ‘zeroing’ that was erroneously applied in the assessment of program 46 for Hunan Valin. The subsidy margin for Hunan Valin has been revised accordingly in the final report calculations (Confidential Appendix 1 refers).

The Commission considers that state owned banks are public bodies. Loan interest rates and terms have been compared to the PBC to determine whether any preferential loans have been provided by public bodies.⁶

The Commission calculated an alternative benchmark with information collected during the verification visits. However, after considering this option, the Commission decided that among the private banks identified all but one were for non-RMB loans. Additionally, the “Finance institution” that was providing funds and considered ‘private’ in this analysis, was not clearly private and was likely influenced by the PBC rate. Therefore, the Commission used only one benchmark (the PBC interest rate) as the benchmark for all loans.

7.5. ‘PUBLIC BODIES’ OR ‘PRIVATE BODIES’

⁶ The Commission is aware that in August 2015 the China Iron & Steel Association noted that during the first half of 2015 Chinese banks had cut loans to steel makers by around USD 15 billion or by six per cent (on a year on year basis) and that the provision of funding by Chinese banks to the Chinese steel industry was increasingly being directed at state owned steel producers.

PUBLIC RECORD

7.5.1. STATE INVESTED ENTERPRISES ARE 'PUBLIC BODIES'

In SEF 322 and 331, the Commission preliminarily determined that SIEs are 'public bodies'. The Commission's analysis is at Appendix 5 of the SEF.

In its submission to the SEF, the GOC claims that Chinese SIEs are not vested with, nor do they exercise, government authority and therefore cannot be considered to be public bodies. The GOC claims that the SEF contains no evidence that SIEs are meaningfully controlled such as would allow them to be found to be public bodies and that the Commission has failed to evaluate the core features of each entity that the Commission considers may be a public body, and its relationship to the government.

In response to the SEF, Hunan Valin which had been preliminarily determined to be an SIE, claims that it is not a public body.

7.5.2. THE COMMISSION'S RESPONSE

In its response to the SEF, the GOC has not provided any evidence that suggests that SIEs are not public bodies. In addition to the discussion in Appendix 5 of the SEF, the Commission has considered the following which further suggests that SIEs are public bodies:

Indicia 1: a statute or other legal instrument expressly vests government authority in the entity concerned;

- a. SASAC is the state-owned assets supervision and administration commission of the People's Republic of China.
- b. The *Decree of the State Council of the People's Republic of China No. 378* (the Decree) vests statutory authority in SASAC to establish a supervision and management systems that suits the needs of socialist market economy, better run State-owned enterprises, push forward the strategic adjustment to the layout and structure of the State economy, develop and expand the State economy, and realize the preservation of and increase in the value of State-owned assets.
- c. For purposes of these Regulations, the term "State-owned assets of enterprises" refers to all forms of State investments in enterprises and the equities generated therefrom, as well as other equities which are legally determined to be owned by the State.
- d. Article 14 of the Decree states that the main obligations of SASAC are:
 - i. promote the reasonable flow and optimized allocation of State-owned assets, and propel the adjustment of the layout and structure of the State economy. [emphasis added]
 - ii. maintain and improve the controlling power and competitive power of the State economy in areas which have a vital bearing on the lifeline of the national economy and State security, and improve the overall quality of the State economy. [emphasis added]
 - iii. guide and promote the establishment of modern enterprise system in State-owned enterprises and State-owned holding enterprises, improve

PUBLIC RECORD

corporate governance, and advance the modernization of management.
[emphasis added]

- e. Article 12 of the Decree states that:
 - i. The State-owned assets supervision and administration authority of the State Council is a specially established authority directly subordinated to the State Council which, on behalf of the State Council, performs the responsibilities of investor, supervises and manages State-owned assets of enterprises. [emphasis added]

Indicia 2: evidence exists that an entity is exercising de facto governmental functions.

Indicia 3: evidence exists that a government exercises meaningful control over an entity

- a. In the United Nations - System of National Accounts 1993 (SNA),⁷ a government controls a corporation if it has the ability to determine the general corporate policy. In the International Public Sector Accounting Standards (IPSASs) issued by the International Federation of Accountants International Public Sector Accounting Standards Board, a government controls a corporation if it has the power to govern its financial and operating policies so as to benefit from its activities. [emphasis added]
- b. Article 6 of the Decree states that the role of SASAC inter alia is to
 - i. ...supervise and administer State-owned assets of enterprises according to law. [emphasis added]
- c. Article 11 of the Decree states that the role of SASAC is to:
 - i. ...make efforts to increase economic efficiency and bear the responsibility of preserving and increasing the value of State-owned assets operated and managed by them. [emphasis added]
- d. Article 12 of the Decree states that:
 - i. The State-owned assets supervision and administration authority of the State Council is a specially established authority directly subordinated to the State Council which, on behalf of the State Council, performs the responsibilities of investor, supervises and manages State-owned assets of enterprises. [emphasis added]
- e. Article 13 of the Decree states that the main responsibilities of SASAC is:
 - i. guide and push forward the reform and restructuring of State-owned enterprises and State-owned holding enterprises. [emphasis added]
 - ii. dispatch supervisory panels to the invested enterprises pursuant to the relevant regulations. [emphasis added]

⁷ Taskforce on harmonization of public sector accounting "Government/ Public Sector / Private Sector delineation issues (AEG 36)" <http://unstats.un.org/unsd/nationalaccount/AEG/papers/m4Delineation.pdf>

PUBLIC RECORD

- iii. appoint or remove the responsible persons of the invested enterprises and evaluate their performance in accordance with the statutory procedures, and grant rewards or impose punishments based on the evaluation results. [emphasis added]
- f. Article 16 of the Decree states that:
 - i. The State-owned assets supervision and administration authority shall establish and improve the mechanism for selecting and appointing the responsible persons of enterprises and the mechanism of incentives and restraints that meet the requirements of modern enterprise system. [emphasis added]
- g. Article 19 of the Decree states that:
 - i. The State-owned assets supervision and administration authority shall, in accordance with the relevant provisions, determine the remuneration of the responsible persons of wholly State-owned enterprises and wholly State-owned companies among the invested enterprises, and grant rewards to or impose punishments upon the responsible persons of the invested enterprises based on the evaluation results. [emphasis added]

In addition to the role of SASAC, the Commission is of the view that the central role of the Chinese Government in the current restructuring of the Chinese steel industry is consistent with its role throughout the development of the industry, including its significant expansion over the past decade which resulted in the excess supply and suppressed prices experienced during the investigation period.

Therefore, the Commission holds that the Chinese Government (including central, provincial and local governments) materially contributed to the excess supply of RIC and Rebar in the domestic Chinese market and hence significantly influenced domestic price for Chinese RIC and Rebar during the investigation period. This influence has occurred through the following mechanisms.

- ii. Chinese Government directives, subsidy programs and involvement in strategic enterprises.
- iii. Taxation arrangements, including value add taxes and export rebates.

The Commission holds that the Chinese Government maintained a central role in the development of the Chinese steel industry and by virtue, materially contributed to its rapid expansion and the chronic oversupply of steel products during the investigation period.

The significance of this role was articulated by a recent CBSA investigation into the dumping and countervailing of ‘certain concrete reinforced bar’ originating from the People’s Republic of China.⁸ The CBSA’s *Statement of Reasons* report released in December 2014 notes that the Chinese Government classifies the ‘Iron and Steel Industry’ as a ‘fundamental

⁸ CBSA, 2014, p14

PUBLIC RECORD

or pillar' industry. The CBSA's report also noted that as a 'fundamental or pillar' industry the Chinese Government maintains a degree of control over the industry, through a minimum of 50 per cent equity in the principle enterprises. The significance of the Chinese Government's role in the Chinese steel industry is also reflected in the National Development Reform Commission's (NDRC's) responsibility for approving all large steel projects.⁹

7.5.3. ARE 'PRIVATE ENTITIES' 'PUBLIC BODIES'?

In response to the SEF 322 and 331, OneSteel submitted that private entities (non-SIEs) are in fact SIEs. Further, OneSteel submitted that the Commission has failed to consider if the private entities have been entrusted or directed by a government or by a public body to carry out a government function.

One Steel submits in that "...the Commissioner ought to properly have found that the following exporter/manufacturers were also SIEs..."

- Yonggang (Jiangsu Yonggang Group Co Ltd);
- Jiangsu Shagang Group; and
- Shandong Shiheng Special Steel Co., Ltd.

What follows at pages 15, 16, and 17 of the submission are some selected extracts from parts of some WTO reports pertaining to private bodies, entrustment and direction.

At page 17 OneSteel states:

Therefore, the question arises whether the "private" exporters were in fact entrusted or directed by the GOC or a public body? The Commissioner has failed to answer this question, even though there is significant evidence contained in Dumping Investigations No. 300 and 301 in relation to his assessment and determination of a 'particular market situation' in relation to the goods in China during the investigation period. Specifically, the Commissioner there found the following "entrustment" and "direction" of exporters and manufacturers of the goods, whether 'public' or 'private' bodies...

7.5.4. THE COMMISSION'S RESPONSE

The Commission holds that the Chinese Government maintained a central role in the development of the Chinese steel industry and by virtue, materially contributed to its rapid expansion and the chronic oversupply during the investigation period.

'A particular market situation' for the goods in China concerns the question whether a price is suitable for normal value purposes. This has been made clear in the manual which states for example:

In considering whether sales are not suitable for use in determining a normal value under s. 269TAC(1) because of the situation in the market of the country of export the Commission may have regard to factors such as:

⁹ CBSA, 2014, p17

PUBLIC RECORD

- *whether the prices are artificially low; or*
- *whether there are other conditions in the market which render sales in that market not suitable for use in determining prices under s. 269TAC(1).*

Government influence on prices or costs could be one cause of “artificially low pricing”. Government influence means influence from any level of government.

In investigating whether a market situation exists due to government influence, the Commission will seek to determine whether the impact of the government’s involvement in the domestic market has materially distorted competitive conditions. A finding that competitive conditions have been materially distorted may give rise to a finding that domestic prices are artificially low or not substantially the same as they would be if they were determined in a competitive market.

What is evident in all of the WTO subsidy panels concerning subsidy is that determinations of whether an entity is a public or private body, or whether as a private body there is entrustment or direction, and whether a financial contribution has been made is usually a complex exercise where evidence must be carefully evaluated.

Concerning a private entity, a finding of entrustment or direction by a government or public body requires the government to give responsibility to a private body or exercise its authority over a private body in order to bring about a financial contribution.

The term ‘entrusts’ has been said to connote ‘the action of giving responsibility to someone for a task or an object’. Therefore the responsibility the government has given the entity to ‘carry out’ any of the functions that are listed in paragraphs (i) to (iii) of Article 1.1(a)(1) of the *Agreement on Subsidies and Countervailing Measures* (SCM) must be examined. These functions are, in summary:

- a government practice that involves a direct transfer of funds;
- government revenue that is forgone or not collected; and
- a government providing goods or services other than general infrastructure, or purchases goods.

In this process inquiry would be made whether this responsibility was achieved by formal or informal means.

A private body may have been directed to ‘carry out’ a function if there is some authority exercised over it by a government or public body. A command is one such means, but there can be means other than a command by which governments can exercise authority over a private body.

WTO reports explain that entrustment or direction of a private body would normally entail some form of threat or inducement which could serve as relevant evidence. Entrustment or direction does not include policy pronouncements alone, and mere acts of encouragement do not suffice. The entrustment or direction cannot be inadvertent, or a by-product of the

PUBLIC RECORD

government regulation. There must be a demonstrable link between the government and the private entities behaviour.

As part of this, it is also necessary of course to examine whether the entrustment or direction of the private body has resulted in a financial contribution. That responsibility so entrusted or directed must be shown to have been carried out and if this has not happened as a matter of fact there cannot be a financial contribution.

It is clear that in this case, specific analysis as set out above as being a necessary part of the private body analysis is different to the broader interventions of a government in the market and its likely effects on price which is the subject of a particular market situation finding in the related dumping cases. A market situation finding has a different focus in that it is examining suitability of price for normal value purposes.

It is possible of course that some information from the particular market situation analysis could be found to be relevant to the analysis regarding the entrustment or direction of a private body. But this would be part of the totality of evidence that would have to be considered when deciding if there had been entrustment or direction of the private body, and if there had been any resulting financial contribution.

OneSteel did not claim that a private body was entrusted or directed by a government or public body in its application. Accordingly, the questions in the questionnaires provided to the GOC and the exporters were not directed towards this matter. As such the issues raised by OneSteel have not been the subject of any verification.

A more detailed and case specific inquiry is needed in order to evaluate any entrustment or direction of a private body by a government or public body, as well as any resulting financial contribution.

The Commission has decided that there is insufficient evidence to reach a conclusion on this matter, and the evidence provided is not sufficient to warrant further lines of inquiry.

7.6. PROGRAM 1 – SELF-SUBSIDISATION OF BILLETS AT LESS THAN ADEQUATE REMUNERATION

In SEF 322 and 331, the Commission preliminarily determined that SIEs are ‘public bodies’. Fully integrated steel manufacturers who are SIEs (and therefore public bodies) self-produced/supplied billets during the investigation period and those billets may have generated a benefit under Program 1.

In response to the SEF, Hunan Valin submitted that none of the cooperative exporters of rebar and RIC had purchases steel billet during the investigation period. Hunan Valin claims that this information is conclusive evidence which demonstrates that there is no steel billet externally purchased at all by the cooperative exporters. Hunan Valin claims that the Commission’s approach has totally ignored its actual raw materials purchases (iron ore, coke and coking coal) or explain how, in a fully integrated steel making process, an exporter could nonetheless give itself a financial contribution by way of the production of steel billet as part of that process.

PUBLIC RECORD

The GOC in its submission stated that in order to establish that Program 1 exists, the SEF needed to establish that the 'government' or a 'public body' was providing steel billet to produce RIC or rebar for LTAR. The GOC states that it the idea that a fully integrated entity would be subsidising itself is contradictory.

7.6.1. THE COMMISSION'S RESPONSE

The Commission considers that exporters that produce their own billet can receive a benefit, if the billet is produced and supplied by a public body (that is, if they themselves are a public body). In the current cases, the Commission has found that the billet has been supplied (including self-supplying) by an SIE resulting in a benefit.

The Commission has considered the following factors while assessing the benefit:

- a. The cooperating SIEs were found to be public bodies.
- b. The SIE has purchased coking coal at LTAR from another SIE. That coking coal was used to produce Coke to use in the production of billet.
- c. The SIE also purchased coke from another SIE for LTAR, for the production of billet.
- d. The benefit of the purchase of raw materials from an SIE at LTAR is specific to the production of the billet.
- e. The billet supplied by the SIE to itself is a benefit from a public body. The benefit arises from the SIEs ability to produce the billet with raw material inputs purchased from other SIEs at LTAR, and those raw materials being further processed to billet which was used in the production of inter alia RIC and rebar for LTAR based on benchmark prices.
- f. The Commission has determined that the benefit conferred on the SIE extends to the production of billet rather than just the purchase of the raw materials to make the billet, as the SIE itself receives additional government support to produce the billet. This support is for the increase in steelmaking capacity through increasing blast furnace capacity. This is specific to the iron and steel industries as well as to RIC and rebar manufacturers and integrated producers specifically.
- g. If the SIE was to sell the billet to another entity, the Commission would consider this to be a countervailable subsidy at the billet level rather than the raw material input. As such, the Commission considers that the supply of the billet at LTAR by the SIE to itself is also a countervailable subsidy for the purpose of calculating a subsidy margin.
- h. If the integrated producer was a private entity, the purchase of the raw materials at LTAR from a public body would confer the benefit, rather than the supply of billet by the private body back to itself. This is due to the fact that the production of the billet is not supported by a public body, just the raw material inputs.

PUBLIC RECORD

7.6.2. BENCHMARK

In the SEF, the Commission selected Latin American export billet prices as the adequate remuneration for the Benchmark price for the billet. The Commission's assessment is at Appendix 2 of the SEF.

In its submission to the SEF, the GOC states that the benchmark selected on the SEF has no connection to prevailing market conditions for billet in China. The GOC claims that the Commission's selection of the Latin American export billet prices was to find a benchmark that did not reflect prevailing market conditions in China in any way, shape or form.

7.6.3. THE COMMISSION'S RESPONSE

In a related dumping investigations INV 300 and INV 301, the Commission found that a particular market situation exists in the steel industry in China. As such, normal value was determined pursuant to subsections 269TAC(4)(c) to (f).

As stated in the SEF, the Commission's determination not to use other South East Asian countries as a billet benchmark was based on the fact that the economies in that region are influenced by the billet prices in China which are subject to subsidisation and government influence. Therefore, it would not reflect a competitive market price in other South East Asian countries. This is consistent with the Commission's findings in REP 300, 301, and SEF 316.

The Commission notes that steel billet is a commodity product and due to highly competitive nature of world steel markets, usually the import prices, export prices and domestic prices of steel billet (and most other steel commodity products) converge in a certain price point making it impossible to profit from arbitrage trading. The Commission observes that only when the domestic market is protected by high import duties, import restrictions, safeguard measures or other means of non-tariff barriers, a significant variation between domestic prices and import/export prices exists.

Based on the trade defence measures in place in USA, Canada, Mexico and South Africa, the Commission holds that the domestic prices of steel billets in these markets do not constitute appropriate benchmarks. In addition, the Commission further holds that except from the USA market which is highly protected with trade defence measures, the other aforementioned domestic markets, with respect to trading volumes of steel billets, are relatively shallow and may not show the same competitive characteristics with a price index having a larger geographical base.

Given that the Commission adjusted the Latin American steel billet export price benchmark for domestic profitability of Latin American manufacturers and inland transportation costs, the Commission is of the view that the Latin American steel billet export prices constitute the best available information for establishing the competitive market costs for steel billets after adjustments for exporters' profits and inland transportation costs.

PUBLIC RECORD

7.7. PROGRAM 2 – COKING COAL PROVIDED BY THE GOVT AT LESS THAN ADEQUATE REMUNERATION

In SEF 322 and 331, the Commission preliminarily determined that SIEs are ‘public bodies’. Therefore, the fully integrated entities who purchased coking coal from SIEs to produce rebar or RIC benefitted from Program 2.

The Commission used the benchmark as the adequate remuneration determined in Appendix 3 of the SEF and also attached as Appendix 3 of this report.

In response to the SEF, the GOC submitted that SIEs are not public bodies. Further, the GOC submitted that it does not agree with the benchmark prices used by the Commission. The GOC claims that the benchmark selected by the Commission has no connection to the prevailing market conditions for coking coal in China.

The GOC also correctly noted that the benchmark price used in investigation 193 (INV193) was the export price of coking coal from China.

7.7.1. THE COMMISSION’S RESPONSE

In its response to the SEF, the GOC has not provided any evidence that suggests that SIEs are not ‘public bodies’. In addition to Appendix 5 of this report the Commission has included further analysis in appendices 2 and 4 of this report.

7.7.2. BENCHMARK

The Commission is aware that China has been identified as the major producer and consumer of coking coal. Having found that domestic prices of coking coal in China are being influenced and distorted by the GOC, the Commission has determined that it is not appropriate to use private enterprise coking coal prices and as such, pursuant to subsection 269TACC(4), a benchmark price has been established.

The Commission holds that the price weakness in the domestic Chinese steel markets contributed to the significant increase in the level of Chinese steel exports in recent years as steel producers attempted to improve cash flow and profitability. As such, the Commission is of the view that the export price of coking coal from China would not reflect competitive market prices for the purpose of benchmarking.

INV193 relates to 2011. Between 2011 and 2014, it is estimated that the proportion of Chinese steel mills making a loss increased from around 10 per cent to 50 per cent. While lower input cost resulted in a reduction in the number of loss making mills from the beginning of 2014, the proportion remained significant throughout the investigation period.

While the Commission notes that the growth in steel production has come from a combination of state owned and privately owned steel producers, the Commission holds that both types of producers have received significant assistance from the Chinese Government, particularly at the provincial and local government level.

7.8. PROGRAM 3 – COKE PROVIDED LESS THAN ADEQUATE REMUNERATION

In SEF 322 and 331, the Commissioner has preliminarily determined that state invested enterprises (SIEs) are ‘public body’. Therefore, the fully integrated entities who purchased coking coal from SIEs to produce rebar or RIC benefitted from Program 3.

The Commission used the benchmark as the adequate remuneration determined in Appendix 4 of the SEF and also attached within Appendix 4 of this report.

In response to the SEF, the GOC submitted that SIEs are not public bodies. Further, the GOC submitted that does not agree with the benchmark prices used by the Commission. The GOC claims that the benchmark selected by the Commission has no connection to the prevailing market conditions for coking coal in China.

7.8.1. THE COMMISSION’S RESPONSE

In its response to the SEF, the GOC has not provided any evidence that suggests that SIEs are not ‘public bodies’. In addition to Appendix 5 of the SEF the Commission has undertaken further analysis has included further analysis at appendices 2 and 4 of this report.

7.8.2. BENCHMARK

The Commission is aware that China has been identified as the major producer and consumer of coke. Having found that domestic prices of coke in China are being influenced and distorted by the GOC, the Commission has determined that it is not appropriate to use Private enterprise coking coal prices and as such, pursuant to s.269TACC(4) a benchmark price has been established.

The GOC did not provide any evidence why the Indian coke prices are not an appropriate benchmark.

INV193 relates to 2011. Between 2011 and 2014, it is estimated that the proportion of Chinese steel mills making a loss increased from around 10 per cent to 50 per cent. While lower input cost resulted in a reduction in the number of loss making mills from the beginning of 2014, the proportion remained significant throughout the investigation period.

While the Commission notes that the growth in steel production has come from a combination of state owned and privately owned steel producers, the Commission holds that both types of producers have received significant assistance from the Chinese Government, particularly at the provincial and local government level.

The Commission’s assessment of the adequate remuneration for coke is at Appendix 4 of this report.

7.9. PROGRAM 4 - ELECTRICITY AS A REGIONALLY SPECIFIC SUBSIDY

In SEF 322 and 331, the Commissioner has preliminarily determined that the Chinese manufacturers of RIC and Rebar did not benefit from Program 4 – Electricity provided by the Government at less than adequate remuneration.

PUBLIC RECORD

In response to the SEF, OneSteel submitted that the Commissioner has erred in his interpretation of section 269TAAC, and the determination of whether or not a subsidy is 'specific' and there 'countervailable'.

OneSteel submitted that the Commission has tested the specificity of program 4 as it relates to a subset of enterprises within the region, but not whether the countervailable subsidy was regionally specific.

7.9.1. THE COMMISSION'S RESPONSE

The Commission has sought information from the GOC and from the cooperating exporters. Selected exporters data and information provided was verified by the Commission.

Provincial electricity tariff data was obtained for both the Jiangsu and Shangdong provinces, the provinces in which the Cooperative exporters are located, for both 2014 and 2015. The Commission compared the tariff data with the information supplied by each exporter and established that each exporter was subject to the tariff applicable to large industry. The tariff data indicated that certain industries were subject to preferential pricing, including the agricultural sector. The tariff data did not indicate that the rebar and RIC industries were subject to specific or preferential electricity tariff rates.

Based on the evidence available, the Commission is not satisfied that the requirements of subsection 269TACC(3)(d) are met. This program will therefore not be countervailed in respect of rebar and RIC exported to Australia from China.

7.10. PROGRAMS 48, 57, 60, 160 AND 176

In SEF 322 and 331, the Commission has preliminarily determined that the programs numbered 48, 57, 60, 160 and 176 are countervailable.

The GOC claims that the Commission has no evidence for the existence of other alleged subsidy programs such as programs numbered 48, 57, 60, 160 and 176.

7.10.1. THE COMMISSION'S RESPONSE

The Commission has determined that a zero subsidy rate will be applicable to the cooperative exporters as no evidence was found to indicate that Cooperative exporters benefited under programs numbered 48, 57, 60, 160 and 176.

However, for uncooperative exporters, in the absence of any relevant information in the current investigations, the Commission considers it is likely that uncooperative exporters have accessed this program, and therefore received a financial contribution under this program where these programs were found to be countervailable programs in other investigations.

9. APPENDIX 4: ASSESSMENT OF ADEQUATE REMUNERATION

9.1. ASSESSMENT OF ADEQUATE REMUNERATION FOR BILLET IN CHINA

Having determined that SIEs who supplied billets in China are ‘public bodies¹⁰’ for the purposes of the Act, the Commission sought to determine a benchmark cost that represents adequate remuneration for billets in China to determine a competitive market cost for billets in accordance with subsection 45(2) of the Regulations. The Commission then calculated the benefit received under Program 1- *Purchases of billets from the government at less than adequate remuneration*.

In REP 300 and REP 301, the Commission established a benchmark cost for billets in the investigation period using Latin American Billet FOB export prices from Platts.¹¹

The Commission notes that in the current investigation, the GOC in its response to the government questionnaire (GQ) stated that ‘...the GOC is neither responsible nor authorised to hold and provide such detailed information about individual enterprises...’

The GOC in its response to the GQ also stated that ‘...as far as Chinese rebar and rod in coils manufacturers are concerned, the quality, quantity, volume, value of its products are entirely determined by the enterprises themselves...’

Therefore, the Commission could not reliably ascertain the volume and value of production of billets in China, the volume and value of imports of billet into China, and the volume and value of exports of billet from China. However, the Commission noted that all cooperating exporters of rebar and RIC are vertically integrated and produce their own billets.

In light of these considerations, in establishing the benchmark for the alleged countervailable subsidy benefits received by the Chinese exporters for billets, the Commission has relied upon information contained in the application, information contained in REP 300 and REP 301.

9.2. ADEQUATE REMUNERATION FOR BILLET

Having found that domestic prices of billets in China are being influenced and distorted by the GOC, a benchmark price has been established. The three options for determining a benchmark, in order of preference based on WTO Appellate Body findings are:

- i. private domestic prices;
- ii. import prices; and
- iii. external benchmarks.

i. PRIVATE DOMESTIC PRICES

¹⁰ Assessment of SIEs to be Public Bodies is within Appendix 4 of this report

¹¹ Investigation period for INV 300, INV 301, INV 322 and INV 331 is same (from 1 July 2014 to 30 June 2015)

PUBLIC RECORD

The Commission notes that all Chinese exporters cooperating with INV 322 and INV 331 are fully integrated manufacturers of steel products, including rebar and RIC. As such, the Commission acknowledges that these exporters (other than one exporter who purchased small volume of billets from a private entity) do not purchase billet, but manufacture it themselves from raw materials including iron ore, coke or coking coal and scrap steel.

However, as noted in REP 300 and REP 301, the Commission considers that the GOC influences in the iron and steel industry are wide ranging and affect competitive market supply.

In REP 300 and REP 301, the Commission has found that private prices of billets are affected by government influence and are therefore not suitable of production inputs including (but not limited to) raw material inputs for billet. (i.e the Commission found that *a particular market situation* exists in Rebar and RIC domestic markets in China)

The Commission considers that private domestic prices of billets in China are not suitable for determining a competitive market price free from government influences.

ii. IMPORT PRICES

The Commission considers that import prices are not suitable for determining a competitive market price of billets in the investigation period.

iii. EXTERNAL BENCHMARKS

Having eliminated the first two options discussed above, the Commission considered other options to establish a benchmark price for billet.

Based on the findings in REP 300 and REP 301, the Commission considers that Latin American steel billet export prices at FOB level constitute the best available information for the competitive market costs of steel billets. This benchmark is expressed in FOB terms. The detailed analysis of establishing this benchmark is in REP 300.

9.3. ASSESSMENT OF ADEQUATE REMUNERATION FOR COKING COAL IN CHINA

9.3.1. INTRODUCTION

After determining that SIEs that supplied coking coal in China are ‘public bodies’ for the purposes of the Act,¹² the Commission sought to determine a benchmark cost that represents adequate remuneration for coking coal in China to determine a competitive market cost for coking coal in accordance with subsection 45(2) of the Regulations. The Commission then calculated the benefit received under subsidy Program 2 (purchases of coking coal from SIEs at less than adequate remuneration).

In SEF 316, the Commission established a benchmark price for coking coal using Platts Australian low volume premium HCC FOB export price of coking coal in the investigation period.¹³

¹² Assessment of SIEs to be Public Bodies is within Appendix 4

¹³ SEF 316 – Grinding Balls from China was published on 21 April 2016. As of the date of publication of the SEF, the Final Report for grinding balls (REP 316) has not been published.

PUBLIC RECORD

The Commission is not aware of an internationally accepted benchmark price for coking coal. From its previous investigations of steel products, the Commission is aware that China has been identified as the major producer and consumer of coking coal. China also restricts the trade of coking coal to the international market by levying high export taxes and restrictions. As such, the market for coking coal is highly concentrated in China. In light of these considerations, in establishing the benchmark for the alleged countervailable subsidy benefits received by the Chinese exporters for coking coal, the Commission has relied upon information contained in the application, information supplied by an independent provider of trade statistics and measures, and other publicly available data.

9.3.2. ADEQUATE REMUNERATION FOR COKING COAL

Having found that domestic prices of coking coal in China are being influenced and distorted by the GOC, a benchmark price has been established. The three options for determining a benchmark, in order of preference based on WTO Appellate Body findings are:

- i. private domestic prices;
- ii. import prices; and
- iii. external benchmarks.

9.3.3. PRIVATE DOMESTIC PRICES

In REP 300 and REP 301, the Commission found that domestic prices of upstream raw materials (including coking coal) are influenced by GOC and therefore not suitable. The Commission has not received any evidence to establish that this assessment of the private prices of coking coal in China has changed.

In the absence of detailed information from the GOC in relation to the domestic market for coking coal, the Commission considers that private domestic prices of coking coal in China are not suitable for determining a competitive market price free from government influences.

9.3.4. IMPORT PRICES

The Commission found that import prices were not suitable as a benchmark due to the lack of import penetration of coking coal and the likelihood that import prices were equally affected by the government influences on domestic prices. The Commission has not received any evidence to establish that this assessment of the private prices of coking coal in China has changed.

In the absence of a detailed response by the GOC in relation to imports of coking coal the Commission does not have sufficient information available to it to make an assessment in regard to import prices. As such, the Commission considers that import prices are not suitable for determining a competitive market price of coking coal in the investigation period.

9.3.5. EXTERNAL BENCHMARKS

Having eliminated the first two options discussed above, the Commission considered other options to establish a benchmark price for coking coal.

PUBLIC RECORD

As discussed in SEF 316 the Commission established a benchmark for coking coal using the Platts Australian low volume premium HCC FOB export price. The Commission is satisfied that this is an appropriate benchmark for the following reasons:

- Australia is a major producer of coking coal and is a significant supplier to China; and
- The Commission was able to cross reference the Platts data against Australian government data to ensure the Platts data being used was reliable.

Based on the above analysis and given that the three quarters of the investigation period for INV 316 overlaps with the investigation period of rebar and RIC, the Commission considers it appropriate to use the benchmark established in INV 316 for coking coal in the current investigations.

9.4. ASSESSMENT OF ADEQUATE REMUNERATION FOR COKE IN CHINA

9.4.1. INTRODUCTION

Having determined that SIEs that supplied coke in China are ‘public bodies’ for the purposes of the Act, the Commission sought to determine a benchmark cost that represents adequate remuneration for coke in China to determine a competitive market cost for coke in accordance with subsection 45(2) of the Regulations. The Commission then calculated the benefit received under subsidy Program 3 (purchases of coke from SIEs at less than adequate remuneration).

In REP 193,¹⁴ the Commission established a benchmark price for coke using GOC supplied data for the Chinese export price of coke in the investigation period.

The Commission notes that in the current investigation, the GOC in its repose to the government questionnaire (GQ) stated that ‘...the GOC is neither responsible nor authorised to hold and provide such detailed information about individual enterprises...’ the GOC in its response to the GQ also stated that ‘...as far as Chinese rebar and rod in coils manufacturers are concerned, the quality, quantity, volume, value of its products are entirely determined by the enterprises themselves...’

Therefore, the Commission could not reliably ascertain the volume and value of production of coke in China, the volume and value of imports of coke into China, and the volume and value of exports of coke from China.

The Commission is not aware of an internationally accepted benchmark price for coke. In REP 193, the Commission noted that China has been identified as the major producer and consumer of coke. China also restricts the trade of coke to the international market by levying high export taxes and restrictions. As such, the market for coke is highly concentrated in China.

In light of these considerations, in establishing the benchmark for the alleged countervailable subsidy benefits received by the Chinese exporters for coke, the Commission

¹⁴ Galvanised steel and aluminium zinc coated steel

PUBLIC RECORD

has relied upon information contained in the application, information supplied by an independent provider of trade statistics and measures, and other publicly available information.

9.4.2. ADEQUATE REMUNERATION FOR COKE

As the Commission has found that domestic prices of coke in China are being influenced and distorted by the GOC, a benchmark price has been established.

The three options for determining a benchmark, in order of preference based on WTO Appellate Body findings are:

- i. private domestic prices;
- ii. import prices; and
- iii. external benchmarks.

i. PRIVATE DOMESTIC PRICES

In REP 300 and REP 301, the Commission found that private prices of coke are affected by government influence and are therefore not suitable. No further information has been provided during this investigation that suggests otherwise.

As such, in the absence of detailed information from the GOC in relation to the domestic market for coke, the Commission considers that private domestic prices of coke in China are not suitable for determining a competitive market price free from government influences.

ii. IMPORT PRICES

The Commission found that import prices were not suitable as a benchmark due to the lack of import penetration of coke and the likelihood that import prices were equally affected by the government influences on domestic prices.

In the absence of a detailed response by the GOC in relation to imports of coke the Commission does not have sufficient information available to it to make an assessment in regard to import prices.

iii. EXTERNAL BENCHMARKS

Having eliminated the first two options discussed above, the Commission considered other options to establish a benchmark price for coke.

As stated in INV 193 the Commission used the Chinese export price in the investigation period to establish the benchmark price for coke. In assessing the data collated from various sources in INV 193, the Commission found there to be a variety of factors affecting the quality and forms of coke produced, imported and/or exported by each of the top five countries trading in these commodities. The coke exported from China was considered to be the most comparable to the coke purchased domestically by the cooperating Chinese exporters, and the export data provided by the GOC was considered to have a lower risk compared to data from other countries for the purpose of determining adequate remuneration.

PUBLIC RECORD

Following the initiation of Rebar investigation on 23 December 2015 and following the initiation of rod in coils investigation on 17 February 2016, the Commission provided two separate the government questionnaires to the GOC seeking detailed information such as total production and consumption (value and volume) of coke, total value and volume of export of coke and total value and volume of coke importation during the investigation period. Public Record versions of the responses to the GQ are at the Commissions website.

In absence of any other information available, the information provided by the GOC could not be compared with any other major supplier of the coke in the international market. Therefore, the Commission did not use the information provided by the GOC in relation to coke to establish an appropriate benchmark for coke.

The applicant proposed that the benefit obtained by exporters of rebar and rod in coils be calculated based on the difference between the Platts daily metallurgical coke and the domestic price of the coke supplied by SIEs.

Based on the best information available at the time of publishing the SEF, the Commission considers Platts daily metallurgical CFR Indian prices as a benchmark price for coke in the investigation period. The Commission is satisfied that this is an appropriate benchmark as the Commission was able to cross reference the Platts data against Australian government data to ensure the Platts data being used was reliable.

9.5. ASSESSMENT OF WHETHER STATE INVESTED ENTERPRISES ARE PUBLIC BODIES

9.5.1. BACKGROUND

Pursuant to section 269TACC, the determination as to whether a financial contribution or income or price support confers a benefit is to be determined by the Minister having regard to all relevant information.

Article 1 of the Agreement on Subsidies and Countervailing Measures (SCM) provides that a subsidy exists where two distinct elements are present: there must be a financial contribution by a government, or income or price support; and this must confer a benefit.

The Commission's dumping and subsidy manual states:

A financial contribution is a transaction through which something of economic value is transferred by the government – this may include for example money, goods, and services. The government's actions are the focus when examining whether there has been a financial contribution.

In establishing whether a financial contribution by a government exists, an important question is how broad is the concept of 'government'? It includes not only the 'government' per se, but also:

- *any 'public body' within the country of export or origin of the goods; and*
- *any 'private body' entrusted or directed by the government to carry out a financial contribution as defined (in defining a subsidy, section 269T seeks to incorporate the above provision).*

PUBLIC RECORD

The definition of a subsidy in section 269T of the Act refers to a '*government*' and to a '*public body*'. The term '*government*' is taken to include government at all different levels – national and sub-national. The definition also refers to a '*private body*' which the government or a public body entrust or directs to carry out a governmental function.

Section 269 TACC (2) states that if the program was a direct financial payment the direct financial payment was received from:

- (a) a government of a country;
- (b) a public body of a country;
- (c) a public body of which a government of a country is a member; or
- (d) a private body entrusted or directed by a government of a country or by such a public body to carry out a governmental function.

Further, subsection 269 TACC(3) states that in determining whether a financial contribution confers a benefit, the Minister must have regard to the following guidelines:

- the provision of equity capital from a government or body referred to in subsection (2) does not confer a benefit unless the decision to provide the capital is inconsistent with normal investment practice of private investors in the country concerned;
- the making of a loan by a government or body referred to in subsection (2) does not confer a benefit unless the loan requires the enterprise receiving the loan to repay a lesser amount than would be required for a comparable commercial loan which the enterprise could actually obtain;
- the guarantee of a loan by a government or body referred to in subsection (2) does not confer a benefit unless the enterprise receiving the guarantee is required to repay on the loan a lesser amount than would be required for a comparable commercial loan without that guarantee;
- the provision of goods or services by a government or body referred to in subsection (2) does not confer a benefit unless the goods or services are provided for less than adequate remuneration;
- the purchase of goods or services by a government or body referred to in subsection (2) does not confer a benefit unless the purchase is made for more than adequate remuneration.

The applicant has asserted that SIEs are public bodies (for the purposes of section 269T), relying upon:

- the Appellate Body Report in United States – *Definitive Anti-Dumping and Countervailing Duties on Certain Products from China (DS379)*¹⁵, where the Appellate

¹⁵ Appellate Body Report, *United States – Definitive Anti-Dumping and Countervailing Duties on Certain Products from China*, WT/DS379/AB/R, adopted 11 March 2011.

PUBLIC RECORD

Body provided guidance as to how it can be ascertained that an entity exercises, or is vested with government authority;

- the Appellate Body Report in United States – *Countervailing Measures on Certain Hot-Rolled Carbon Steel Flat Products from India (DS436)*¹⁶, where guiding principles were stated as regards the meaning of “meaningful control”;
- a 2014 World Steel Association report which detailed that nine of the top ten steel companies in China, in terms of total crude steel production were SIEs, all of which are either wholly or partly owned by the SASAC, and all of which produce steel billet and/or rebar and/or rod in coils, themselves or through their subsidiaries;
- the *Interim Regulations on Supervision and Management of State-Owned Assets of Enterprises* (Interim Regulations) which set out the functions and obligations of a state-owned assets supervision and administration authority; and
- examples of SASAC’s current and ongoing direct control and responsibility for the appointment and removal of personnel from SIEs.

The applicants relied upon this information to assert that the functions of SASAC, such as the power to appoint persons to key management positions, evidence a greater role in the management of enterprises than mere shareholder status. The applicant further asserts that this serves as evidence that the GOC exercises meaningful control over those SIEs that produce steel billet and/or rebar and/or rod in coils, themselves or through their subsidiaries, and as such these entities possess governmental authority and are public bodies.

9.5.2. PREVIOUS CONSIDERATION

The term ‘public body’ is not defined in the legislation or the SCM Agreement. However, it has been considered by the Commission in previous investigations and has been the subject of a number of WTO Appellate Body findings. To inform the Commission’s assessment of this issue in the present investigation, the following decisions are considered to be relevant:

- INV 177 – the Commission’s finding in relation to the subsidisation of hollow structural sections (HSS) exported from China;
- INV 203 – the Commission’s reinvestigation of certain findings in INV 177, one of which was whether SIEs that supplied hot rolled coil (HRC) to manufacturers of HSS were public bodies;
- INV 193 – the Commission’s findings in relation to the subsidisation of aluminium zinc coated steel and galvanised steel (collectively ‘coated steel’) exported from China. The Commission found that SIEs that supplied hot rolled coil (HRC) to manufacturers of coated steel were public bodies;

¹⁶ Appellate Body Report, *United States – Countervailing Measures on Certain Hot-Rolled Carbon Steel Flat Products from India*, WT/DS436/AB/R, adopted 19 December 2014.

PUBLIC RECORD

- INV 237 – the Commission’s finding in relation to the subsidisation of silicon metal exported from China;
- INV 238 – the Commission’s finding in relation to the subsidisation of deep drawn stainless steel sinks exported from China;
- Anti-Dumping Review Panel (ADRP) Report (15 November 2013) in relation to INV 193 – the ADRP disagreed with the Commission’s finding that SIE HRC suppliers were public bodies. The Parliamentary Secretary accepted the ADRP’s finding in relation to this issue;
- DS 379 – this Appellate Body finding considered the meaning of ‘public body’ in accordance with Article 1.1(a)(1) of the SCM Agreement. This report is considered to be one of the most definitive references to date on the matter of public bodies;
- DS 436 – this WTO Panel finding further considered the requirements for finding an entity to be a public body; and
- United States – *Countervailing Measures (China) (DS 437)* – this dispute involved a number of decisions of the US in relation to multiple investigations and again considered the factors that determine whether an entity is a public body.

In relation to DS 437, while this decision is recent the Commission considers it of less relevance to the present investigation. In the US investigations considered by the Panel in DS 437, the US determined that the relevant input suppliers were public bodies on the grounds that these suppliers were majority-owned or otherwise controlled by the GOC.

The Commission agrees with the views of the Panel in this dispute, and the Appellate Body in DS 379, that majority ownership of itself does not lead to a conclusion that an entity is a public body. The Commission does not advocate such an approach in the present investigation.

In DS 379 the Appellate Body provided guidance as to how it can be ascertained that an entity exercises, or is vested with government authority, outlining the following indicia that may help assess whether an entity is a public body (vested with or exercising governmental authority):¹⁷

- **Indicia 1** - where a *statute or other legal instrument* expressly vests government authority in the entity concerned;
- **Indicia 2** - where there is evidence that an entity is, *in fact, exercising governmental functions* may serve as evidence that it possesses or has been vested with governmental authority; and
- **Indicia 3** - where there is evidence that a government exercises *meaningful control* over an entity and its conduct may serve, in certain circumstances, as evidence that

¹⁷ Appellate Body report DS379 at [318]

PUBLIC RECORD

the relevant entity possesses governmental authority and exercises such authority in the performance of governmental functions.

The Commission, and more recently the ADRP, have used these indicia as the basis for its approach to determining whether entities subject to dumping and countervailing investigations should be considered to be public bodies.

9.5.3. PRIOR DECISIONS OF THE COMMISSION

In INV 177, the Commission assessed whether SIE suppliers of HRC were public bodies according to each of the three indicia. The Commission concluded that Indicia 1 was not met, however evidence existed to show that both Indicia 2 (evidence that an entity is, in fact, exercising governmental functions) and Indicia 3 (evidence that a government exercises meaningful control over an entity and its conduct) are satisfied in relation to Chinese HRC and/or narrow strip manufacturers. This conclusion was based on an assessment of a number of factors including policy documents issued by the GOC and statements by SIE steel manufacturers in public reports. The Commission considered that the evidence ‘show(ed) that these entities are still constrained by, and abiding by, multiple GOC policies, plans and measures, and in some circumstances acting as an important means by which these GOC policies and plans are implemented.’

The Commission’s finding in INV 177 was appealed to the Trade Measures Review Officer (TMRO), who directed the Commission to conduct a reinvestigation of the public body finding. The Commission’s reinvestigation report, INV 203, affirmed the findings in INV 177. It considered that “SIEs are exercising government functions and that there is evidence that the government exercises meaningful control over SIEs and their conduct. In performing government functions, SIEs are controlling third parties.”

In INV 193, relating to coated steel, the Commission relied on its findings in INV 203 to find that SIE suppliers of HRC were public bodies. The GOC appealed this finding to the ADRP. In disagreeing with the Commission’s finding, the ADRP made the following observations:

- Active compliance with governmental policies and/or regulation does not equate to the exercise of governmental functions or authority;
- In concluding that certain companies were actively implementing objectives in the five-year plans the Commission conflated the purpose of acting in accordance with a government policy and carrying out government functions;
- Article 14 of the Interim Measures, which vests SASAC with certain obligations in respect of the economy, is a reference to SASAC and not to the SIEs. It does not evidence how, or if, there is authority delegated to SIEs to control participants in the iron and steel industry;
- Having an impact on other participants in the industry is not indirectly controlling them and is not evidence of the exercise of governmental authority; and

PUBLIC RECORD

- There is no material which demonstrates that there has been a delegation (noting this is not necessarily in the strict sense of delegation) of governmental authority to SIEs to impose state-mandated policies on participants in the iron and steel industry.

9.6. THE COMMISSION'S CONSIDERATION

The Commission considers that the ADRP's decision to direct a reinvestigation of the findings in INV 177 was, to a large extent, premised on the TMRO's view that there needs to be the essential element of exercising a power of government over third persons. This view was in turn likely influenced by the words of the Appellate Body in DS 379, 'that the term "government" is defined as the "continuous exercise of authority over subjects; authoritative direction or regulation and control".'

The WTO Review Panel considered this issue in DS 437, a decision that was handed down after the ADRP's report in relation to coated steel. The Panel stated in its report that '(it) was not persuaded by China's argument that... "[a] public body, like government in the narrow sense, thus must itself possess the authority to 'regulate, control, supervise or restrain' the conduct of others".' The Appellate Body's view was that this was not supported by the findings in DS 379. It stated that:

In our view, governments, either directly themselves or through entities that are established, owned, controlled, managed, run or funded by the government, commonly exercise or conduct many functions or responsibilities that go beyond "the effective power to 'regulate', 'control', or 'supervise' individuals, or otherwise 'restrain' their conduct".

The Commission considers that while it was relevant for the ADRP to consider this element in the context of the coated steel case, the ability to control others is of itself not decisive in determining whether an entity possesses, exercises or is vested with government authority.

In DS 436, also released after the ADRP's findings, the WTO Dispute Settlement Body further considered the issue of whether a government exercises 'meaningful control' over an entity. The Panel stated that 'to determine whether an entity has governmental authority, an investigating authority must evaluate the core features of the entity and its relationship to government. Governmental control of the entity is relevant if that control is "meaningful".'

The Dispute Settlement Body stated that, in its view:

- 'government involvement in the appointment of an entity's directors (involving both nomination and direct appointment) is extremely relevant to the issue of whether that entity is meaningfully controlled by the government';
- 'while a government shareholding indicates that there are formal links between the government and the relevant entity, government involvement in the appointment of individuals – including serving government officials – to the governing board of an entity suggests that the links between the government and the entity are more substantive, or "meaningful", in nature'; and

PUBLIC RECORD

- ‘in the context of government ownership and government involvement in the appointment of directors, such evidence provides additional support for a finding that an entity is under the “meaningful” control of the government.’

The Interim Regulations on Supervision and Management of State-owned Assets of Enterprises (Interim Regulations)¹⁸ set out the functions and obligations of a state-owned assets supervision and administration authority. Relevant provisions are as follows:

- Article 13 states that one of the main responsibilities is to ‘appoint or remove the responsible persons of the invested enterprise’;
- Article 16 states that a state-owned assets supervision and administration authority ‘shall establish and improve the mechanism for selecting and appointing the responsible persons or enterprises’;
- Article 17 describes the positions presumably considered to be ‘responsible persons’, which include the general manager, deputy general manager, chief accountant, chairman, vice-chairman and director of the board;
- Article 17 also states that where the State Council or any level of government ‘provide otherwise’ in relation to the appointment or removal of responsible persons then those decisions prevail;
- Article 18 states that a state-owned assets supervision and administration authority shall establish a performance evaluation system and conduct annual performance reviews of responsible persons; and
- Article 19 states that a state-owned assets supervision and administration authority shall determine the remuneration of responsible persons of wholly state-owned enterprises.

The Commission asked the GOC to provide evidence as to whether SASAC has appointed directors or other key management positions to any of the suppliers of steel billet, electricity, coke, coking coal, rebar and rod in coils identified within the exporter questionnaire responses submitted. Additionally, as part of the government questionnaire, the GOC was requested to respond to a number of questions concerning entities that produce rebar and rod in coils and upstream raw material, including:

- a list of all manufacturers of rebar and rod in coils and upstream raw materials suppliers and the percentage of GOC ownership in each (A4);
- whether there is GOC representation in the business, and if so the type of representation (e.g. on the Board of Directors), the authority responsible, and an indication of any special rights provided to the representative (e.g. veto rights) (A4);

¹⁸ These Regulations are formulated to establish a State-owned assets supervision and management system that suits the needs of socialist market economy, better run State-owned enterprises, push forward the strategic adjustment to the layout and structure of the State economy, develop and expand the State economy, and realize the preservation of and increase in the value of State-owned assets.

PUBLIC RECORD

- for each business where the GOC is a shareholder and/or there is GOC representations in the business provide the complete organisational structure, including subsidiaries and associated businesses and copies of annual reports of the business for the last 2 years (A4);
- confirm whether the ‘Law of the People’s Republic of China on State-Owned Assets of Enterprises’ is current and has not been superseded or supplemented by other laws and if so provide any superseding or supplementary laws (C2).

In its response to the GQ, the GOC failed to respond directly to these questions. The Commission noted that the current law, as outlined in Article 7 of the Interim Regulations, prevents SASAC from exercising any government functions of administrative public affairs. Article 7 states:

People’s governments at all levels shall strictly abide by the laws and regulations on State-owned assets management, persist in the separation of government functions of social and public administration from the functions of investor of State-owned assets, persist in the separation of government functions from enterprise management and separation of ownership from management.

The State-owned assets supervision and administration authority shall not perform the functions of social and public administration assumed by the government. Other institutions and departments under the government shall not perform the responsibilities of investor of State-owned assets of enterprises.

The Commission does not consider this Article to conflict with a finding that SIEs are public bodies. The Appellate Body in DS 379 stated that an entity may possess certain features suggesting it is a public body and others that suggest that it is a private body. In DS 436 the Government of India argued that the National Mineral Development Corporation enjoyed a significant amount of autonomy from it, which was granted “to make the public sector more efficient and competitive”. These are similar sentiments to those expressed by the GOC in the Commission’s previous considerations of public bodies. The Dispute Settlement Body in DS 436 stated that ‘(s)o long as public sector enterprises are involved, we are not persuaded that the grant of a greater degree of autonomy is necessarily at odds with a determination that such public sector enterprises constitute public bodies’.

On balance, the information collected as part of this investigation in addition to the prior rulings on this issue and the absence of detailed information from the GOC in relation to its role in the operation of SIEs, the Commission considers that it is reasonable to conclude for the purpose of the current investigation that SIEs that produce and supply raw materials to manufacturers of rebar and rod in coils are public bodies.
