Australian industry verification report

Verification and case details

Initiation date	25/11/2025	ADN	2025/115
Case number	691		
The goods under consideration	Aluminium Windows & Doors		
Case type	Dumping and Subsidy Investigation		
Australian industry	Ventora Group Pty Ltd		
Applicants	Ventora Group Pty Ltd and Australian Glass and Windows Association		
Location	131-149 National Drive, Dandenong South, VIC 3175		
Verification from	20/01/2026	to	23/01/2026
Investigation period	1/07/2024	to	30/06/2025

The Anti-Dumping Commission will review this report, including its views and recommendations.

This report may not reflect the Anti-Dumping Commission's final position.

Introduction

Ventora Group Pty Ltd (Ventora) provided data to the Anti-Dumping Commission (the commission) in relation to its joint application with the Australian Glass and Windows Association (AGWA) for dumping and subsidy Investigation 691 (INV 691) into aluminium windows and doors (AWD or, the goods) from the People's Republic of China (China).

A verification team (the team) has verified whether the data Ventora Group submitted is complete, relevant and accurate for use in case 691. Anti-Dumping Notice (ADN) 2016/30 describes the commission's verification procedure.

This report explains the commission's key findings, including the evidence considered and material issues identified. Where Ventora or the commission materially revised the submitted data, this report outlines the nature, extent and outcomes of these revisions.

The commission prepared this report to publish on the electronic public record for INV 691.

Verification teams are authorised to conduct verifications under sections 269SMG and 269SMR of the *Customs Act 1901* (Cth) (the Act).¹

¹ All legal citations in this report are to the Act unless otherwise stated.

1 COMPANY BACKGROUND

1.1 Corporate structure and ownership

Ventora is a wholly owned subsidiary of Aristotle Holding Pty Ltd, ultimately owned by Platinum Equity group. Ventora has been in operation since the 1940's with acquisitions over time of other brands. The organisation was previously owned by JELDWEN before being acquired in 2023 with a name change to the VENTORA GROUP.

Ventora is an Australian manufacturer of aluminium windows and doors through its brands A&L Windows Pty Ltd (A&L), Breezway Australia Pty Ltd (Breezway), Stegbar Pty Ltd (Stegbar), and Trend Windows and Doors Pty Ltd (Trend). These businesses operate nationally across Australia producing window and door systems. Ventora's main operations cover the full design and fabrication process, including aluminium profiling, surface finishing, frame assembly, glazing, hardware fitting and quality assurance. Finished products are distributed across Australia to residential and commercial builders, architects, developers and retail customers through Ventora's national logistics and showroom networks.

Ventora is a member of AGWA, which is a joint applicant to this investigation and is the relevant industry association.

AGWA is a member of the following industry associations:

- Housing Industry Association
- Building Products Industry Council
- Standards Australia Member
- Australian Fenestration Rating Council (AFRC)
- National Association of Testing Authorities, Australia (NATA)
- Australian Sustainable Built Environment Council
- Business NSW Associations Forum.

1.2 Related parties

The commission examined the relationships between Ventora, and parties involved in the production and sale of the goods. The commission found no related party customers or suppliers involved in Ventora producing or selling the goods during the investigation period.

1.2.1 Related suppliers

Ventora is not related to any of its suppliers.

1.2.2 Related customers

Ventora confirms that none of its domestic customers are related parties. Ventora does however perform inter-company transfers between its entities in order to fulfil projects. The sale of the goods is realised by the selling entity rather than the transferring entity.

2 THE AUSTRALIAN INDUSTRY MANUFACTURING LIKE GOODS

2.1 Manufacturing in Australia

2.1.1 Production process

Ventora manufactures AWD in Australia from two primary raw materials - aluminium extrusion profiles and glass sheets. Its manufacturing process involves the following stages.

- **Production stage 1:** Fabrication where extrusion profiles are cut to dimensions according to customer orders.
- **Production stage 2:** Machining operations, such as drilling, milling and slotting, are carried out to accommodate hardware, drainage systems and corner connectors.
- **Production stage 3:** Assembly where the aluminium profiles are assembled into frame units using mechanical stakes, screws and sealants.
- **Production stage 4:** Glazing where the glass is cut, edge-worked, toughened or laminated, and processed into insulated glass units. It is then fitted into the aluminium frames using glazing beads, rubber gaskets, and silicone sealants.
- **Production stage 5:** Hardware integration, to provide operational functionality, hinges, locks, handles and sliding mechanisms are incorporated into the AWD frames.
- **Production stage 6:** Quality control and testing where completed AWD units are subjected to quality assurance testing.
- **Finished goods:** Goods exit the production process after passing quality control assessment.
- **Scrap:** Aluminium offcuts generated during manufacturing are collected and sold to approved recycling partners.
- **Packaging:** Finished AWDs are packaged with corner guards, shrink-wrap, and protective films to protect against transit damage.
- **Dispatch:** Distribution is arranged via direct delivery to large-scale builders, through trade channels, or to retail and homeowner customers via branded showrooms.

2.2 Model control codes

The sales and costs data Ventora Group submitted complies with the model control code (MCC) structure detailed in ADN 2025/115 and reproduced below.

Item	Category	Sub-category	Identifier	Sales Data	Cost Data
1	Door / Window	Door	D	Mandatory	Mandatory
		Window	W		
2	Assembly	Fully Assembled	FA	Mandatory	Optional
		Partially Assembled	PA		
3	Type	Sliding window	ASW	Mandatory	Optional
		Fixed window	AFW		
		Awning window	AAW		
		Sliding door	ASD		
		Stacker door	ASTD		
		Louve window	ALW		
		Other door	AOD		
		Other window	AOW		

4	Height (millimetres) (mm)	Up to and including 1,543	H1	Mandatory	Optional
		> 1,543 up to and including 1,820	H2		
		> 1,820 up to and including 2,100	H3		
		> 2,100 up to and including 2,400	H4		
		> 2,400 up to and including 3,000	H5		
5	Width (mm)	Up to and including 1,210	W1	Mandatory	Optional
		> 1,210 up to and including 1,810	W2		
		> 1,810 up to and including 2,410	W3		
		> 2,410 up to and including 3,610	W4		
		> 3,610 up to and including 7,000	W5		
6	Thermal break	Thermally broken	TB	Mandatory	Optional
		Not thermally broken	NTB		
7	Glaze	Single	SG	Mandatory	Optional
		Insulated unit	IG		
		Other material	OM		
		No glass	NG		
8	Coating	Coated	C	Mandatory	Optional
		Not coated	NC		
		Other material	OM		
		No glass	NG		
9	Safety	Toughened	TG	Mandatory	Optional
		Laminated	LM		
		Float	F		
		Other material	OM		
		No glass	NG		

Table 1 - MCC structure

2.2.1 Amendments to model control codes

After comparing prices of different models of the goods, the commission does not recommend amending the MCC structure.

2.3 Verification of model control codes

The below provides detail on the MCC sub-categories determined and verified to source documents.

Category (amend as required)	Determination of the sub-category
Door / Window	Specified by product name on the commercial invoice.
Assembly	Based on the nominal width shown on the commercial invoices.
Type	Based on the product code shown on the commercial invoices.
Height (mm)	Specified in the commercial invoice.
Width (mm)	
Thermal Break	Based on the product specification shown on the commercial invoices.
Glaze	Specified by product name on the invoice which reconciles to product codes within each entities respective sales systems.
Coating	
Safety	

Table 2 - MCC sub-category determination

2.4 Like goods

Like goods are defined under section 269T(1) of the Act as:

goods that are identical in all respects to the goods under consideration or that, although not alike in all respects to the goods under consideration, have characteristics closely resembling those of the goods under consideration.

The commission considers that the like goods manufactured by Ventora are likely to be identical to, or have characteristics closely resembling, the goods exported to Australia. The following details the commission's findings which relies on the available information at the time of preparing this report.

- **Physical likeness:** Australian manufactured AWDs is either identical to or closely resembling the imported goods in terms of its type, width, height and other specifications. The goods share the same primary physical characteristics notwithstanding variations dependant on the window and door product's individual technical specifications.
- **Production likeness:** Imported and Australian-produced AWDs are used interchangeably in the same or comparable end-uses.
- **Commercial likeness:** Locally produced AWDs compete directly with imported AWDs in the Australian market.
- **Functional likeness:** Imported and Australian-produced AWDs are used interchangeably in the same or comparable end-use application.

2.5 List of all model control codes

Ventora produced and sold and produced like goods with the MCCs outlined in **Non-Confidential Attachment 1**.

2.6 Like goods assessment

The commission is satisfied that:

- the AWD produced by Ventora is like to the goods under consideration exported to Australia from China²

² Section 269T(1) (definition of 'like goods')

PUBLIC RECORD

- at least one substantial process of manufacture of AWD is carried out in Australia by Ventora³
- the like goods produced by Ventora were wholly or partly manufactured in Australia⁴ and
- there is an Australian industry, consisting of Ventora and other industry members which produce like goods in Australia.⁵

³ Section 269T(3)

⁴ Section 269T(2)

⁵ Section 269T(4)

3 AUSTRALIAN MARKET

3.1 Australian market background

The Australian market for AWD is supplied by the following:

- Ventora and other domestic producers and fabricators which manufacture AWD in Australia⁶
- producers from other countries, who supply Australian distributors or end-users through various channels including direct mill sales, international traders, and Australian-based stockists or resellers.

The countries that exported AWD to Australia during the investigation period were predominantly China with a range of other countries supplying less than 2% of the total estimated Australian Market for the investigation period. Exporters from China have been the largest volume supplier of AWD imports since at least 1 July 2021.

As noted in Chapter 2, imported AWDs compete directly with locally manufactured goods in the same end-use applications.

3.2 Australian market structure

3.2.1 Marketing segmentation and end uses

AWDs supplied by Ventora and other domestic producers are used primarily in residential and commercial construction sectors.

AWDs create access points, allowing natural light and ventilation, ensuring safety and security, and contributing to the aesthetic value of buildings. AWD is broadly segmented by end use applications, project type and distribution channel.

AWD end use applications are generally:

- detached housing
- medium to high density residential buildings/developments including apartments and townhouses
- commercial buildings and
- institutional projects

AWD end users include builders, contractors, architects, property developers and homeowners. Ventora and the broader Australian industry service both large-scale construction projects (including commercial) and smaller residential projects.

Locally produced and imported AWD are used interchangeably across the key market segments in the Australian market.

⁶ Ventora and the AGWA's application is supported by a number of domestic AWD manufacturers and fabricators.

3.2.2 Distribution arrangements

Distribution arrangements in the Australian market appear to fall into the following two categories:

- Direct supply to end-users, supplied by either the Australian industry or imported goods, includes construction companies, property developers and builders.
- Distributors supplied either by the Australian industry or overseas manufacturers, who then distribute the goods to large retail chains and specialised contractors.

3.2.3 Supply

AWD supply in Australia is via the following key channels to market:

- Ventora and other domestic AWD producers and fabricators.
- Australian importers, distributors and traders sourcing goods from overseas manufacturers including China and other countries.
- Overseas manufacturers supplying Australian customers directly.

Supply conditions are most influenced by access to raw materials pricing, specifically aluminium extrusions and glass, manufacturing capacity, market consumer (residential, multi-residential or commercial), lead times and project specifications.

3.2.4 Demand

Ventora identifies demand for AWDs is predominately driven by activity in the Australian residential and commercial construction sectors.

Main demand drivers include:

- detached residential housing construction and new development approvals
- commercial building construction
- renovation and replacement activity
- government, instructional and infrastructure related building projects.

Ventora also describes the following additional factors influencing demand for AWD including:

- Seasonal construction trends, with more residential construction activity typically occurring during warmer months. However, large commercial projects tend to be less affected by seasonality.
- Market growth or decline is determined by the construction industry's performance, government spending on infrastructure, and trends in residential housing. Factors such as interest rates, housing affordability, and urbanisation also impact demand.
- Changes to building codes and regulations related to energy efficiency, security, and environmental standards can influence demand. Any changes in policies related to building or construction standards may either increase or decrease demand.
- Advances in window and door technology, such as improved energy efficiency and the use of smarter materials, can drive product innovation and shift demand patterns.

3.3 Australian market pricing

Ventora's AWD pricing is not generally set via standard price lists. Instead, pricing is quotation-based dependant on project requirements and product specifications. Ventora's application was accompanied with a sample of commercial documents in the form of project quotations and commercial invoice packages. Ventora outlined its cost plus margin approach, but notes price is significantly influenced by broader market conditions including raw material pricing and import competition. In price negotiations, Ventora will consider the price offerings of imports where this information is available.

3.4 Australian market size

The commission assessed the Australian market size based on data supplied in the application from Ventora and data sourced from the Australian Border Force (ABF) import database using the relevant tariff subheadings and statistical code for AWD consistent with the application and the initiation notice.

The relevant tariff subheadings used to identify imports of the goods is:

- 7610.10.00 (statistical code 12)

The commission considers that its approach to estimating the size of the Australian market for AWD is relevant and reasonable as:

- the ABF import database is an independent and reliable source of data in relation to imported AWD and
- the completeness, relevance and accuracy of the sales data compiled by Ventora was verified by the commission (chapters 4 and 5 of this report refers).

Figure 1 below shows the sum of sales volumes of Australian AWD produced by Ventora, the estimated production of other Australian industry members and imported AWD expressed in units (that is a finished window or door), in each 12 month period aligned to the

financial year ending 30 June (FY). The chart outlines the market size for the injury analysis period 1 July 2021 to 30 June 2025 specified for the investigation.

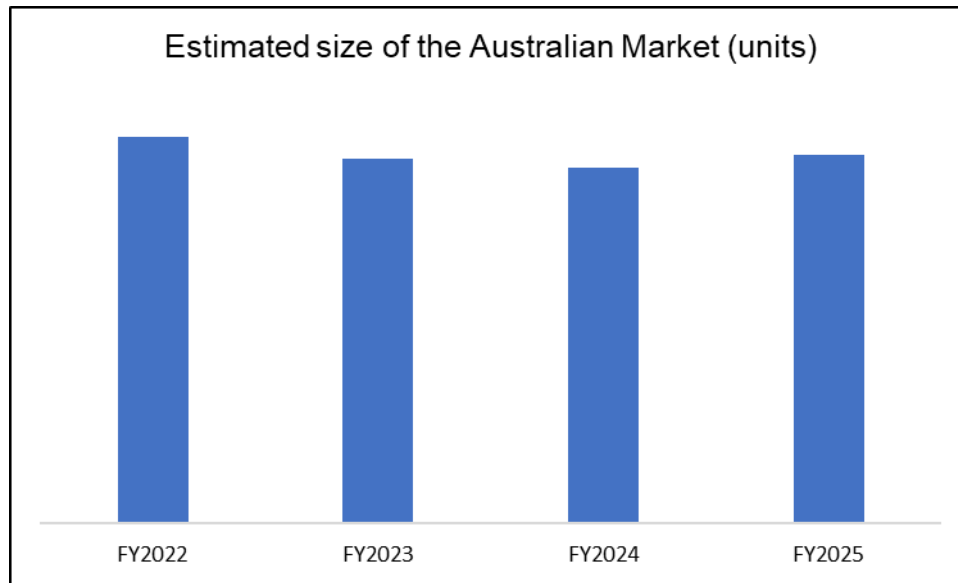

Figure 1 – Australian market for AWD

The commission observes a steady decline in the size of the Australian market from FY2022 to FY2024 with a slight increase in FY2025. Overall, the Australian market has reduced by approximately 4% since FY2022.

4 VERIFICATION OF SALES COMPLETENESS AND RELEVANCE

The commission typically verifies sales as complete and relevant by reconciling the revenue and quantity in sales listings up to management accounts and then audited financial accounts. ADN 2016/30 further describes this verification process.

The commission verified whether the sales listings Ventora submitted are complete and relevant by reconciling them to the audited financial statements, consistent with ADN 2016/30.

The relevance and completeness of the sales listing for Ventora was established by the following procedures.

1. Reconciled the figures for the sales of like goods by Ventora in the investigation period (1 July 2024 to 30 June 2025), as reported in Appendix A4 (for each entity) and Appendix A6 to the application filed by Ventora, to its audited financial statement for the FY2025.⁷
2. Reconciled the revenue reported in Ventora's FY2025 audited financial statements to its accounting system and trial balance.
3. Reconciled each entity's (A&L, Trend, Stegbar and Breezway) master sales listing for the investigation period to the trial balance extracted from the accounting system for each entity.
4. Reconciled the sales value of like goods from the master sales listing for Ventora to the sales listings for Ventora supplied at Appendix A4 for each entity and Appendix A6 for each entity in its application.
5. Verified product categorisation for like goods and non-subject goods and reconciled reported sales values across product types.

The commission did not identify issues during this process.

4.1 Import sales by company

Ventora did not report any sales of imported like goods on the basis that it did not have any. Details of this verification process are contained in the verification work program and its relevant attachments, at **Confidential Attachment 1**.

4.2 Export sales by company

Ventora exported low volumes of the goods to other countries during the investigation period. These sales were identified in the master sales listings and verified as part of the sales verification process.

4.3 Sales completeness and relevance finding

Having regard to the findings and observations of this verification, the sales data submitted by Ventora is complete and relevant.

⁷ As amended by the exceptions at sections 4.1 and 6.1.

5 VERIFICATION OF SALES ACCURACY

The commission typically verifies sales as accurate by reconciling a selection of volume, revenue and other key data in the sales listings down to source documents. ADN 2016/30 further describes this verification process.

The commission verified whether the export and domestic sales listings Ventora submitted are accurate by reconciling them to source documents, consistent with ADN 2016/30.

The commission identified the issues outlined below. The commission detailed this process in the verification work program and its relevant attachments in **Confidential Attachment 1**.

5.1 Sales accuracy exceptions

Exception 1: Revision to Breezway A4 listing

Description: Breezway's listing did not include height and width MCC's correctly. The commission requested the list be revised to capture the MCCs accurately.

Resolution: Ventora revised the A4 sales listing concerning Breezway's sales to include the applicable MCC categories for height and width.

Exception 1: Exceptions to all entity A4 sales listings relating to inland transport and packaging allocation

Description: All entities' A4 sales listings were prepared with inland transport costs calculated on freight revenue not based on freight expenses.

Resolution: Each entity provided a revised A4 sales listing to include inland transport costs based on freight expenditure.

5.2 Related party customers

Ventora sold like goods to related companies via inter-company sales. Analysis of the prices for sales to its inter-company sales and unrelated customers did not find evidence of price discrimination. The commission considers the selling prices for like goods sold by Ventora to be arms length and suitable for inclusion in the assessment of the economic condition of the Australian industry.

5.3 Sales accuracy finding

The commission is satisfied that the sales data Ventora submitted is accurate, including any revision outlined in the exceptions above. Details of this verification process are contained in the verification work program and its relevant attachments, at **Confidential Attachment 1**. Accordingly, the commission considers Ventora's sales data suitable for analysing the economic performance in the period from 1 July 2021 to 30 June 2025.

6 VERIFICATION OF COST COMPLETENESS AND RELEVANCE

The commission typically verifies cost to make and sell (CTMS) data as complete and relevant by reconciling the total cost to make (CTM) and selling, general and administrative (SG&A) expenses in cost listings up to management accounts and then audited financial accounts. ADN 2016/30 further describes this verification process.

The commission verified whether the CTM and SG&A data Ventora submitted are complete and relevant by reconciling it to audited financial statements, consistent with ADN 2016/30.

The commission verified the relevance and completeness of the cost data as follows:

1. Reconciled CTMS data for the production and sale of like goods by Ventora (per entity) in the investigation period (1 July 2024 to 30 June 2025), as reported in Appendix A6 to the application filed by Ventora to its audited financial statement for the FY2025.
2. Reconciled the master listing concerning costs for the investigation period to the trial balance extracted from the accounting system for each entity to determine the accuracy of all A6 appendices provided.
3. Reviewed the variances between the costs for like goods as reported in each A6 appendix and the trial balance figures for each entity.
4. Verified the categorisation of the cost to make of like goods and other products.
5. Reconciled the production cost figures for like goods in the master sales listing for Ventora to the figures for each entity supplied at appendix A6.

The commission verified the relevance and completeness of the SG&A data as follows:

1. Reconciled the SG&A data to Ventora's audited financial statements and trial balance for each entity to ensure that all relevant items had been included.
2. Reconciled the SG&A data for the investigation period to the trial balance and to Ventora (at an entity level).
3. Reviewed selected items of the SG&A data to ascertain whether these were relevant to be included in the SG&A calculation per entity.
4. Verified the direct selling expenses and reconciled these to the sales listings per entity.
5. Verified the selected expense items for accuracy.

The commission identified the issues outlined below during this process. Details of this verification process are contained in the verification work program and its relevant attachments, at **Confidential Attachment 1**.

6.1 Exceptions during verification of completeness and relevance of CTMS data

Exception 3: Cost of production

Description: The verification of costs (for all entities) identified an understatement of conversion costs and in the total CTMS for the goods.

Resolution: Ventora provided revised upwards costs reconciliation worksheets and revised costs spreadsheets (for all entities) for each model of like goods.

Exception 4: Trend SG&A

Description: The SG&A calculation was based on Trend's consolidated profit and loss but was rectified to be calculated based on the profit and loss for Trend's individual entities (also outlined in exception 6). This resulted in an overstatement of the SG&A.

Resolution: Trend revised its cost worksheets which correctly captures the SG&A expense for the goods.

Exception 5: Stegbar SG&A

Description: Stegbar mistakenly excluded two cost items from its profit and loss calculations. This resulted in an understatement of the CTM figure.

Resolution: Stegbar revised the calculations to include the relevant cost items, resulting in an increased SG&A figure.

Exception 6: Breezway SG&A

Description: Breezway's CTM assumed its raw material and direct labour costs were a specific percentage of its total costs, which represented the proportion of external sales volume, and applied that percentage to its P&L. Breezway did not apply this percentage to its SG&A expenses, resulting in an overstatement of its SG&A.

Resolution: Breezway corrected this method to calculate its SG&A in its worksheets which reduced its total SG&A.

6.2 CTMS completeness and relevance finding

Having regard to the findings and observations of this verification, the costs data submitted by Ventora is complete and relevant, including the revisions outlined in the exceptions above. Details of this verification process are contained in the verification work program and its relevant attachments, at **Confidential Attachment 1**.

7 VERIFICATION OF COSTS AND SELLING ACCURACY

The commission typically verifies CTMS as accurate by reconciling a selection of volume, cost and other key data in the CTM and SG&A listings down to source documents. ADN 2016/30 further describes this verification process.

The commission verified whether the CTM and SG&A listings Ventora submitted are accurate by reconciling them to source documents, consistent with ADN 2016/30.

The commission identified the issues outlined below. The commission detailed this process in the verification work program and its relevant attachments in **Confidential Attachment 1**.

7.1 Cost to make and sell accuracy exceptions

Exception 7: A&L CTM

Description: Entity A&L had inadvertently omitted products that are captured in the goods description which caused an understatement of its CTM for doors.

Resolution: A&L provided a revised cost worksheet with the correct goods categorisation and amended the CTM. The verification team tested the result of this amendment onsite and is satisfied the relevant goods are now included.

Exception 8: Trend CTM

Description: The CTM calculation was based on Trend's consolidated profit and loss. The commission requested this be updated to reflect the calculation based on the sub-entities of Trend.

Resolution: Trend updated its CTM calculation and workbook. The commission tested the result of the change within the verification and is satisfied this accurately reflects Trend's CTM.

7.2 Cost allocation method

Table 3 outlines how the commission allocated each cost component.

Cost component	Method applied
Raw materials	1 of 4 entities allocate based on actual material cost for each production quantity to calculate the per unit raw material cost. 3 of the 4 entities allocate raw material costs based on a revenue percentage.
Scrap offset	Scrap is collected and sold through approved recycling partners. The actual material cost used to calculate the per unit raw material cost takes into account scrap recovery.
Labour	1 of 4 entities allocate labour costs based on production quantity. 3 of the 4 entities calculate a revenue percentage to allocate labour cost.
Manufacturing overheads	
Depreciation	Depreciation is recorded in the accounts associated with each product group.

Table 3 - Cost allocation method

7.3 Cost to make and sell accuracy finding

The commission is satisfied that the CTMS data Ventora's submitted is accurate and reasonably reflects the costs associated with the production and sale of the goods, including any revision outlined in an exception above.

8 ECONOMIC CONDITION

8.1 Applicant's injury claims

In its application for a dumping and subsidy investigation, Ventora and the AGWA claimed that the Australian industry has experienced injury in the form of:

- lost sales volume and market share
- lower production volumes
- price suppression
- reduced profits
- reduced profitability
- decline in asset values
- reduced capital investment
- reduced revenue
- reduced return on investment
- reduced capacity
- reduced capacity utilisation
- reduced employment and
- reduced productivity.

The applicants claim injury in the form of the above factors commenced during FY2022.

8.2 Approach to injury analysis

The analysis detailed in this chapter is based on verified financial information submitted by Ventora, information relevant to tenders and data from the ABF import database.

Prior to undertaking the injury analysis, the commission compared the estimate of Australian import volumes contained in the application data provided by Ventora and volumes the commission has ascertained using information from the ABF import database.

The total size of the Australian market estimated by Ventora was overall comparable to the commission's calculations that rely on ABF import data. The commission has assessed the economic condition of the Australian industry from 1 July 2021 to 30 June 2025 using the information provided by Ventora and ABF import data. The figures are presented on an annual basis for years ending June 30.

This commission's assessment is at **Confidential Appendix 1**.

8.3 Volume effects

8.3.1 Sales volume and market share

Figure 2 below shows that the Australian industry's sales volume of like goods declined over the injury analysis period.

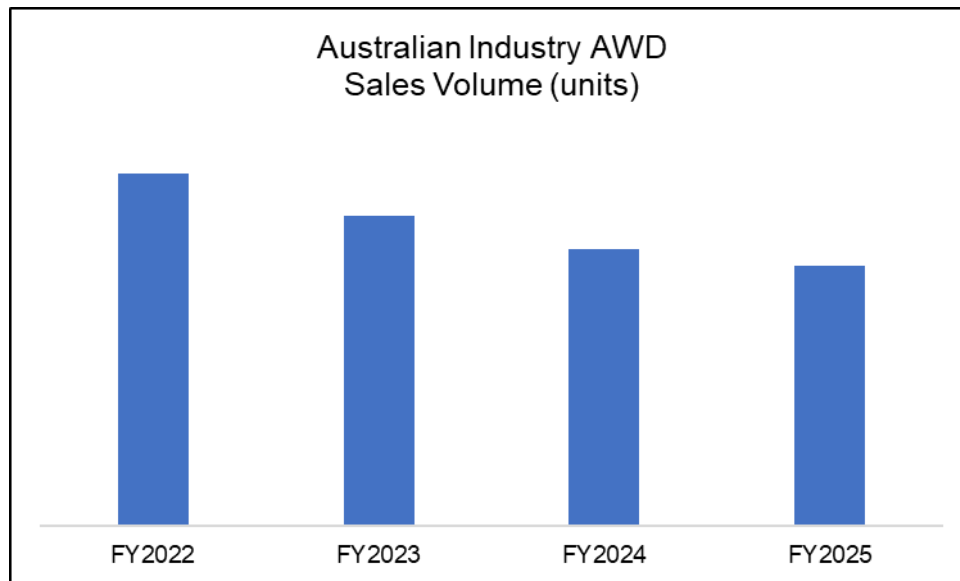

Figure 2 – Australian Industry (including Ventora) sales volume

The commission observes that Australian industry sales volume declined consistently from FY2022 to FY2025. The decline in sales is most pronounced in the last two years of the injury analysis period in FY2024 and FY2025 with the lowest volume observed in the investigation period.

Figure 3 shows Ventora's sales volume of like goods follows the same trend observed for the Australian Industry declining over the injury analysis period.

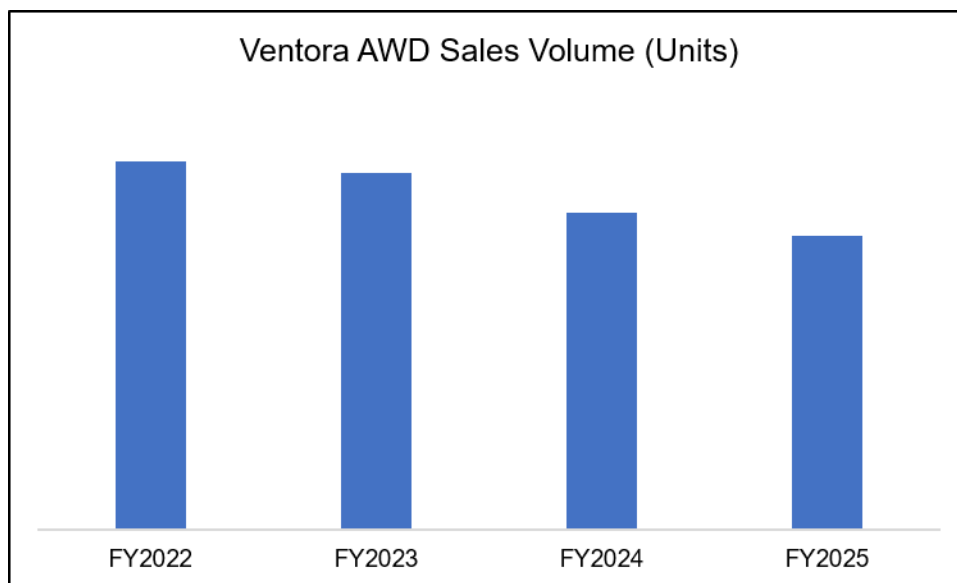

Figure 3 – Ventora's sales volume

Figure below outlines the commission's assessment of market share held by the Australian industry, against imports from China and all other countries. To estimate market share, the commission has used verified data from the applicant, ABF import data and unit pricing estimates. The commission will continue to evaluate the market share using other information available including importer and exporter data during the course of the investigation.

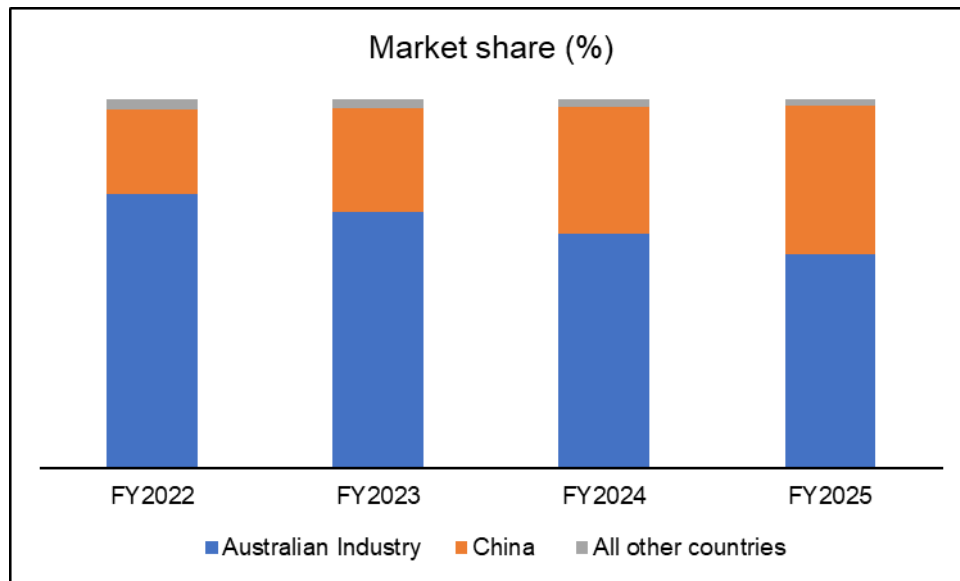

Figure 4 - Estimated market share of the Australian market for AWD

The commission observes a year-on-year decline in the Australian industry's market share from FY2022 to FY2025. This coincides with a rise in imports from China over the same period.

The Australian industry's loss of market share aligns with the decline in both production and sales volumes for Ventora over the same years, as outlined in Figure 2 and Figure .

The commission considers that the Australian industry have suffered injury in the form of lost sales volume and reduced market share.

8.4 Price effects

Price depression occurs when a company, for some reason, lowers its prices. Price suppression occurs when price increases, which otherwise would have occurred, have been prevented. An indicator of price suppression may be the margin between prices and costs.

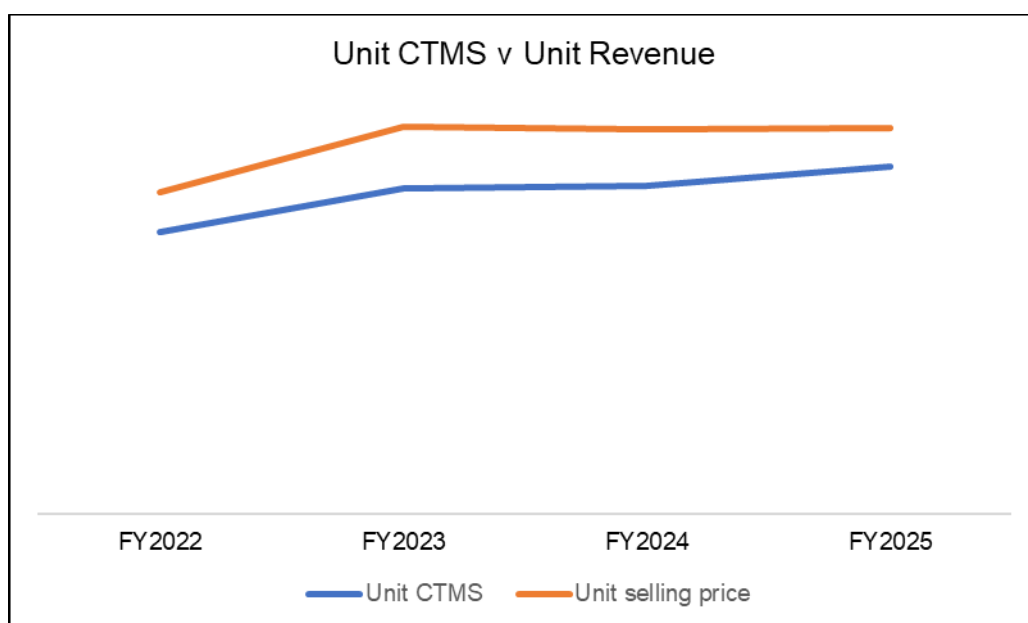

Figure 5 - Ventora's domestic unit revenue and unit CTMS over the injury period

Figure compares unit sales revenue and unit CTMS for like goods manufactured and sold by Ventora from FY2022. In each year the unit sales revenue has exceeded unit costs. The commission observes the unit selling price increases materially in FY2022 to FY2023, which represent the highest margin over cost for the injury analysis period. Following this upward trend from FY2023 to FY2025 prices plateaued.

During the injury period the unit CTMS has increased, with the greatest increase occurring between years FY2024 and FY2025. The commission also observes the margin between unit selling prices and unit CTMS initially widened from FY2022 to 2023 but narrowed from FY2023 to FY2025. The narrowest margin is experienced in the investigation period, FY2025. While Ventora has been able to increase its price from FY2022 to FY2023, it has not increased its price over the period FY2023 to FY2025.

Based on the analysis of price and cost having verified Ventora's data, the commission considers that Ventora has experienced injury in the form of price suppression during the injury analysis period and specifically in the investigation period. Contrary to the application, the commission does not consider that the above analysis is illustrative of price depression.

8.5 Profit and profitability

Ventora claims ongoing price suppression and depression has impacted negatively on its profits and profitability over the injury and investigation periods. Ventora considers that its unit revenue and profitability would not have declined to its current levels in the absence of price suppression and depression.

Figure 6 below outlines Ventora's net profit and profitability from AWD taken across the injury analysis period commencing FY2022.

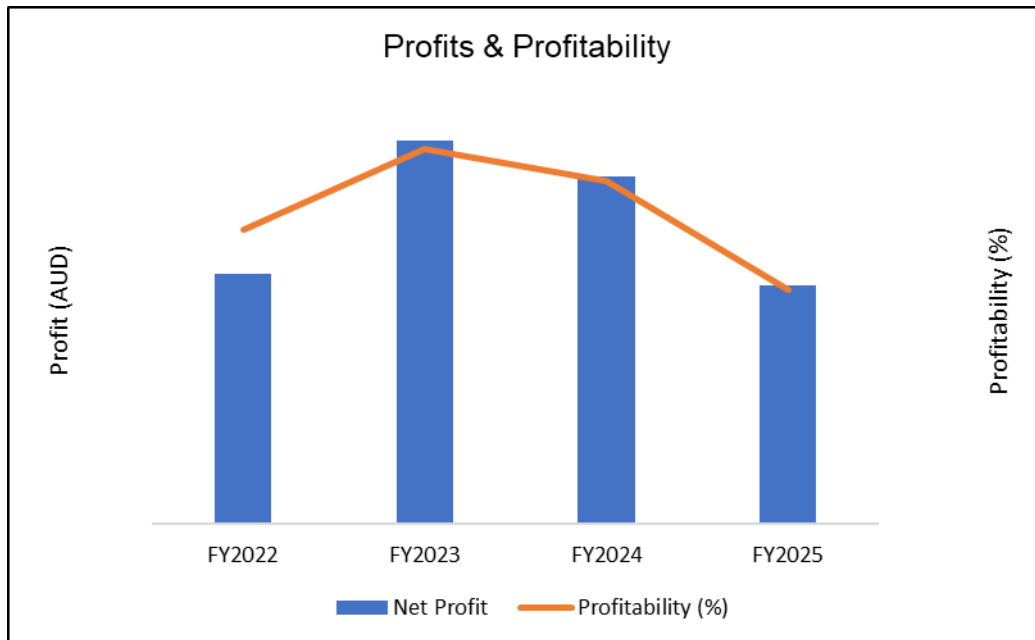

Figure 6 - Ventora's domestic net profit and profitability over the injury period

Figure 6 indicates that while Ventora remained profitable its profit has decreased throughout the injury period and its profitability has declined from FY2023 to FY2025 but most sharply in the investigation period.

Based on this analysis, the commission considers that the decline in profit and profitability is demonstrative of injury, driven by lost sales volume and price suppression. Accordingly, the commission considers that Ventora has experienced injury in the form of reduced profits and reduced profitability over the injury period.

8.6 Other economic factors

As part of its application, Ventora provided the commission with financial data to demonstrate other injury factors it has suffered over the injury period. Ventora claimed that it has suffered injury in the form of:

- decline in asset values
- reduced capital investment
- reduced revenue
- reduced return on investment
- reduced capacity
- reduced capacity utilisation
- reduced employment and
- reduced productivity.

Table 4 below shows the change or variation in other economic factors during the injury analysis period, starting calendar year (CY) 2021 to the first half (January to June) of CY 2025, indexed to CY 2021.

Factor	CY 2021	CY 2022	CY 2023	CY 2024	CY 2025
Assets	100	129	117	113	121
Capital investment	100	177	148	136	132
Revenue	100	111	114	99	49
Return on investment	100	105	115	88	62
Capacity	100	99	87	81	82
Capacity utilisation	100	101	87	79	35
Employment	100	99	90	80	80
Productivity	100	101	101	97	45

Table 4 - Other Injury factors (CY 2021 = 100)

The following summarises the observations regarding other factors of performance relevant to Ventora's claims of injury experienced by Ventora over the analysis period.

- Revenue has declined steadily across the analysis period, but has significantly fallen in the investigation period. The reduction in revenue corresponds to the decline in prices and sales volumes.
- Return on investment fell sharply after FY2023, declining to a significantly lower level in FY2025.
- Productivity declined steadily from FY2022 to FY2024, with significant decline in the investigation period.

- Capacity experienced the most significant shift from FY2022 to FY2023 and has remained constant over the remainder of the injury analysis period, while capacity utilisation fell consistently and most prominently in FY2025 reflecting declining production volume relative to Ventora's available capacity.

Exception 2: Revised capacity utilisation

Description: Entity Breezway identified application preparation errors in the data for the following 'other economic factors' - capacity and capacity utilisation.

Resolution: A revised Appendix A7 correcting the errors was provided and the commission tested the changes within the verification to ensure its accuracy. Breezway provided the commission source evidence to support this change.

8.7 Conclusion

Based on an analysis of the information contained in the application and obtained and verified during the visit, it appears that Ventora has experienced injury in relation to the following economic factors.

- lost sales volume and market share
- lower production volumes
- price suppression
- reduced profits
- reduced profitability
- reduced revenue
- reduced return on investment
- reduced capacity
- reduced capacity utilisation
- reduced employment and
- reduced productivity.

The factors listed above indicate a deterioration in the economic condition of Ventora over the injury analysis period. The data provided in the application by Ventora, and provided within the verification, supports a conclusion that Ventora experienced injury across various forms and these findings are consistent with the claims made in Ventora's application.

The commission's assessment of the economic condition of the Australian industry is found at **Confidential Attachment 1**.

9 CAUSAL LINKS

9.1 Background and approach to analysis

Under section 269TG, one of the matters that the Minister must be satisfied of in order to publish a dumping duty notice is that material injury to an Australian industry producing like goods has been or is being caused or is threatened.

The commission discussed with Ventora whether the alleged dumping and/or subsidisation of imported AWD can be demonstrated to be causing material injury to the Australian industry and collected evidence to support those claims. The commission will consider the evidence further during the investigation.

9.2 Volume effects

Ventora considers there is a direct correlation between the ongoing presence and increase in volumes of AWDs imported from China and the sales volumes and market share of the Australian industry. It submits that in a declining Australian market, the loss of market share and sales volume has resulted in a material loss of revenue for Ventora. Ventora states that Chinese suppliers have established a large supply channel into the Australian market in a relatively short period of time and expects this channel will be utilised more aggressively going forward.

As indicated in section 8.3, Ventora's sales volume declined with imports from China increasing. Imports from other countries (besides China) decreased over the injury analysis period with decreases occurring year on year, however imports from the other countries account for less than 3% of the Australian market.

9.3 Price effects

Ventora states that its prices are influenced by the presence and the price of imported goods in the market. Specifically, Ventora claims it has responded to the presence of Chinese imports by depressing and suppressing its prices for like goods.

Ventora submits that, absent dumped and/or subsidised imports from China, it would have achieved prices indicative of a level playing field in the Australian market. Ventora provided the commission with documentary evidence relating to price negotiations with its customers. The evidence indicates that Australian customers are referring to Chinese import prices for the goods in their project negotiations with Ventora, and are seeking lower prices from Ventora accordingly.

The commission will further consider these claims as part of its examination into the price effects of imports of the goods on Australian industry during the investigation.

9.4 Injury caused by factors other than dumping and subsidisation

9.4.1 Volume and prices of imported like goods that are not dumped

Ventora states that China exported AWD to Australia during the investigation period at sufficient volumes and at sufficiently low prices, as compared to the export volumes and prices from other sources, to cause the Australian industry the material injury alleged.

Therefore, despite any effect of imports from other sources, the injury to the Australian industry caused by the goods from China is material and significant.

9.4.2 Contractions in demand or changes in patterns of consumption

Ventora is not aware of any material changes in patterns of consumption, other than a decline in the Australian market as a whole, that would affect the demand for AWDs in the Australian market.

9.4.3 Developments in technology

Ventora is not aware of any developments in technology that might explain any aspect of the material injury experienced by the Australian industry.

9.4.4 Export performance and productivity of the Australian industry

Ventora claimed that as its entities do not generally export like goods, export performance cannot be a factor causing injury.

9.5 Materiality of injury

Ventora contends that the injury experienced is greater than likely to occur in the normal ebb and flow of business. It states it has experienced a decline in revenue over the injury period, along with a corresponding decline in profit and profitability. Ventora states it has lost market share and experienced price suppression and depression. It submits that these factors, when considered as a whole, along with the other economic factors discussed above, show injury that it considers is material. The commission will consider other factors causing injury as the investigation progresses.
