Guidelines of the Twelfth Five-Year Plan for National Economic and Social Development

Part 1: Transforming growth pattern, create a new scenario for scientific development

Chapter 1: Development Environment

Given the great achievements of social development that we have attained in the last five years, the 11th Five Year Plan period is indeed extraordinary. In face of the complex changes and major risks both at home and abroad, the whole nation are united. Under the leadership of the Central Committee of the Communist Party of China (CPC), “Strive to Develop” has been attached great importance. Through implementing theories and policies of CPC and conducting the most effective macroeconomic regulation, we fully give full play to the socialist mechanism as well as to the market in terms of allocating resources. As a result, historical changes have occurred to our nation. We have not only effectively addressed the negative impacts caused by the global financial crisis but also maintained a rapid and stable economic development, which has laid a solid foundation for the sustainable development in the future. We successfully held the Beijing Olympic Games and the Shanghai World Expo. We have achieved the major objectives set in the 11th Five Year Plan. With five -year hard work, the national GDP and competitiveness have significantly enhanced. People have enjoyed a relatively high living standard, which has given a boost to China’s international status and influence. Tremendous achievements have been made in various aspects including construction of socialist economy, socialist politics, socialist culture, and ecological civilization. The new chapter of socialism with Chinese characteristics has been written. Having said that, our success does not come easily and the experiences we have gained are precious. The aspirations we have had are profound and lasting.

The current world is characterized of continuous complex changes, which may last for a while. Based on the judgment of both domestic and international situations, China is still in an important period of strategic opportunities during which there is a great deal China can achieve, and it is faced with both precious historic opportunities and plenty of foreseeable and unforeseeable risks and challenges. We should strengthen our awareness of the opportunities and challenges ahead. A good understanding of law of development, better adaptation to the environment, appropriate reconciliation of a variety of conflicts can put forward the endeavour of opening-up and reform as well as socialist modernization drive. In face of multi-polarity, deepening economic globalization, new changes in global economic political system, breakthroughs in technological innovation and that international tide remains peace, cooperation and development; China could embrace the general international environment which makes for the nation’s stable development. Meanwhile, international financial crisis still poses its profound impacts on global economy, slowing down the world’s economic growth; the global demand structure also appears salient changes, with competition more intensively focusing on market, resources, talented people, technologies and standards; global issues such as climate change, energy security and food safety are becoming protruding; protectionism in various forms has been
increasing. Under the scenario, China’s external international environment has proved to be more complicated. China is to locate its positioning in international economic division of labour and to facilitate international economic cooperation as well as to create its new advantages in global competition. Domestically speaking, China is experiencing industrialization, informationization, urbanization, marketization and further internationalization, with a stable growth in per capita national income. China is also undergoing an accelerated transformation of economic structure and a huge potential in market demand, enjoying abundant capital supply, an increase in the capacity of technology and education, an enhancement in the quality of labours and a gradual improvement of infrastructure. Dynamics in structure is conspicuously strengthened; government macro-control ability as well as its capability to handle complicated situations has also been greatly been enhanced. Social security system is getting strengthened along with overall social stability within grasp. China is confident to with its ability and social conditions to promote the development of economic and social development up to a new level as well as to raise the overall national strengthen. However, it is important to have a clear sight of the imbalanced, incompatible and non-sustainable elements within China’s development, which mainly turn out to be a tightened constraint between economic growth on one hand and resources and environment on the other, an imbalance between investment and consumption, a relatively large income disparity, uncompetitive technological innovation ability, unreasonable industrial structure, vulnerable agricultural basis, a gap between rural and urban development, a coexistence of total employment pressure and structural contradiction, a significant increase in social conflicts and a still considerable number of institutional obstacles that restrain scientific development. China needs to wisely judge and accurately grasp the development trend, making full use of various advantageous conditions to efficiently solve the protruding contradictions and issues.

Chapter 2: Guiding Principles
To formulate the 12th Five Year Plan, we should hold high the great banner of socialism with Chinese characteristics. Under the guidance of Deng Xiaoping Theory and the important thought of Three Represents, we should comprehensively implement a scientific outlook on development and adjust to the new changes both home and abroad. We should live up to people’s expectation to live a better life by deepening the endeavour of opening up and reform, and improve the social welfare system and people’s livelihood. In order to achieve those goals, the scientific development is the theme while the acceleration of economic growth modes is the cardinal line. Additionally, we should consolidate the progress achieved in tackling the global financial crisis and improve a steady and rapid economic development in the long run as well as promote social harmony. The above-mentioned goals will lay a decisive foundation for building a well-off society in an all aspects.

The theme of scientific development is required by the times. It determines the overall situation of our endeavour of opening-up and reform, and the modernization drive. With more than 1.3 billion people, China is still and will be on the primary stage of socialism. As the largest developing country in the world, development is the key to solving problems. Currently, adhering to development in China is the main principle, In other words, we should stick to scientific development, pay more attention to people and to the comprehensive and coordinated sustainable development, put a premium on overall planning with due consideration for all concerned, attach more
importance to social welfare protection and improvement and enhance social justice. The inevitable way to promote scientific development is to maintain the cardinal line of speeding up the transformation of economic development, which accords well with China’s fundamental realities and the new characteristics of the current developing stage. To accelerate transformation of the mode of economic development is a serious reform in China’s economic and social fields, which must be run through the overall process and various fields in the development of economy and society, to make for a comprehensive, coordinated and sustainable development, to facilitate changes while developing and further promote development with changes on the way, to finally realize the sound and fast development of both economy and social life. To achieve these goals, the fundamental requirements lie in that:

We still elevate the core competitiveness of manufacturing industry, improving the new and strategic industries, speeding up the development of service industry as well as the primary and the second industries, striking a balance between the urban and rural development, proactively and steadily put forward the urbanization, accelerating the construction of socialist new villages and achieving the coordinated and interactive development among areas.

Scientific progress and innovation will support the transformation. Through comprehensively implementing the strategy of rejuvenating our country through science and education and talents, we will give full play to the role of science and human resources. China should upgrade its capabilities in indigenous research and innovation in science, technology and administration, train more innovative talents and improve education for workers. In a word, we will strive to speed up the construction of an innovation country.

The "fundamental end" of economic transformation is to improve people's lives, which could only be achieved by improving social welfare system, giving priority to job creation, providing equal public services to every citizen and stepping up reform of the income distribution system. We will unswervingly realize the shared prosperity and bring the benefits to the people.

In transforming the economic development mode, the importance of building a resource-saving and environment-friendly society should be stressed to save energy, reduce greenhouse emissions and actively tackle global climate change. We should develop circular economy and low carbon technologies. Through striking a balance between economic development and population growth, sustainable development will be enhanced.

The endeavour of reform and opening-up will drive the transformation. We should unswervingly push forward reforms in economic, political and social areas. Efforts should be made in building up a mechanism of advantage to scientific development. We should carry out the open-up strategy to achieve outcomes. We are working with the international society to tackling global challenges and share the potential for development.

Chapter 3: Main Targets (see excel)
Resource conservation and environmental protection targets are striking. We will maintain farmland reserves at 1.818 billion mu (approximately 121,260,600 hectares).
We will cut water consumption per unit of value-added industrial output by 30%, and increase the water efficiency coefficient in agricultural irrigation to 0.53. Non-fossil fuel resources will rise to 11.4% of primary energy consumption. Energy consumption per unit of GDP will decrease 16% and CO2 emissions per unit of GDP will decrease 17%. We will make significant reductions in the total emissions of major pollutants: chemical oxygen demand (COD) and SO2 by 8%, ammonia nitrogen and nitrogen oxide by 10%. Forest coverage rate will increase to 21.66% and national forest stocks will increase by 600 million cubic metres.

We will establish green and low carbon development ideas and focus on energy conservation and emission reduction, improve incentives and constraint mechanisms, and stimulate the establishment of resource-saving and environmentally friendly production and consumption to strengthen sustainable development and improve ecological standards.

Chapter 21: Actively cope with global climate change

Unit One: Control Greenhouse gas emissions
Unit Two: Increase adaptability to climate change
Unit Three: Launch wide ranging international cooperation

Summary:
We will positively respond to global climate change. Massive reductions in energy consumption intensity and carbon dioxide emissions should be regarded as binding targets to efficiently control greenhouse gas emissions. This plan will reasonably
restrict energy consumption, decrease the growth of industries with high energy consumption, and increase energy efficiency. The plan will strengthen energy conservation assessment responsibilities, complete energy-saving regulations and standards, improve market mechanisms and implement pivotal energy-saving projects. It will popularize advanced energy-saving technologies, accelerate the application of the Energy Management Contract, and pay adequate attention to industries such as construction and transportation. We will revise energy consumption structures and increase the use of non-fossil energy resources as well as increase forest cover, volume, and carbon sequestration. We will increase adaptability to climate change, with special attention to the reaction to extreme weather. This plan will establish and improve the statistical monitoring system of greenhouse gas emissions and energy saving and emission reductions, devote more efforts to climate change research, accelerate low carbon application and research, and establish a carbon emission trading market. In addition, it will persist in common but differentiated principles of liability and vigorously launch international cooperation in response to global climate change.

We must attach equal importance to slowing down and confronting global warming, we must give free rein to the advancement of technology, we must perfect system mechanisms and policy systems and improve our capacity for dealing with climate change.

**Unit One: Control Greenhouse gas emissions**

We must carry out comprehensive adjustments to the composition of the industrial and resource structures, save energy and improve energy efficiency and increase forest carbon sinks, amongst several other measures. We must significantly reduce the intensity of our energy consumption and CO2 emissions, as well as effectively regulate greenhouse gas (GHG) emissions. We must rationally regulate our total energy consumption levels, carry out serious management of resource usage, accelerate the formulation of resource development plans, clarify total regulatory targets and define a workable mechanism. We will promote the planting of trees and forestation to increase the national forest-cover area to 12.5 million hectares. We will accelerate research, development and application of low carbon technologies and regulate GHG emitting sectors such as industry, construction, transportation and agriculture. We will look into creating low carbon product standardisation, labelling and authentication systems, establish an effective system for calculating GHG emission statistics and gradually create a carbon emissions trading system. We will advance low carbon pilot projects.

**Unit Two: Increase adaptability to climate change**

We will formulate an overall national strategy for combating climate change and strengthen our scientific research and observation to influence our analysis of climate change. We will take climate change factors into full consideration when planning and creating industrial sector composition, basic facilities and large scale projects. By strengthening our response to climate change, we mean creating a capacity to cope with extreme climate incidents; accelerating and expanding technological research and development; and improving the levels of adaptation to climate change of certain key sectors (such as agriculture, forestry and water resources) and certain areas (such
as by the coast and fragile ecosystems). We must enhance monitoring, advance reporting and prevention of extreme weather and climate incidents, and we must improve our capacity to guard against and alleviate natural disasters.

Unit Three: Launch wide ranging international cooperation

Adhering to the principle of common but differentiated responsibilities, we will actively participate in international negotiations and promote the establishment of a fair and reasonable international system for confronting climate change. We will strengthen international exchange and strategic policy dialogue on climate change. We will also develop pragmatic cooperation in areas like scientific research, technology research and development and capacity building, as well as push for the establishment of an international cooperation platform and management system for funding and technology transfer. We will provide help and support to developing countries in confronting the challenges of climate change.

Chapter 22: Strengthen energy conservation and management

We will strengthen energy conservation management. We will formulate and implement limits on energy consumption per unit of production in energy-intensive industries and energy efficiency standards for the end-use of energy-consuming products. We will strictly enforce the system for assessing and examining energy savings in investment projects.

Summary:

We will emphasize resource conservation and management. We will fulfill conservation priority strategies and fully implement the controlled use of resources, two-way regulation from both the supply and demand sides and differentiated management. We will reinforce the geological survey of energy and mineral resource conservation while legitimately developing and integrating strategic areas for energy and mineral resources, and installing critical mineral resource reserve systems. Land management systems should be further improved. We will strengthen annual planning and monitoring, formulate land conservation standards and reinforce evaluation of land use and conservation. We will pay adequate attention to water safety in order to build a water-saving society by setting up water resource allocation systems and enhancing water resource management and paid utilization. Desalination technology should be highly encouraged. Groundwater exploitation should be rigorously restricted.

Enhance environmental protection intensity. We will prioritize solutions for those lacking access to drinking water as well as air and land contamination which adversely affect people’s health. We will enhance comprehensive governance and improve the environment. This plan will assign target responsibilities for emissions
reduction and strictly control the discharge of pollutants. In addition, we should expand our control of major contaminants. The construction of waste (sewage and rubbish) treatment facilities should be accelerated. The prevention of sewage leaking into major river basins should be emphasized. We will limit air and noise pollution, strengthen the regulation of heavy metals, hazardous waste, and soil pollution. We must develop a regulatory capacity for nuclear radiation. We will implement standards for pollutant discharge and emissions and evaluate their effect on the environment as well as strengthen the supervision of law enforcement and complete the accountability system for accidents and natural disasters. We will actively develop emerging markets and promote the diversification of the export market.

Section 2: Improving the comprehensive effect of imports

We will optimize the structure of imports, actively expand imports of advanced technology, key components, domestically rare resources and energy-conservation and environmental protective products. We will expand the import of consumer goods to a reasonable degree and make use of the important macro-economic balancing and structure-adjusting role of imports and optimize the structure of trade payments. Government at all levels should create a sound policy, system and legal environment, break down market segmentation and industry monopoly, stimulate initiative and creativity of market players, steer the behaviour of market players towards national strategic objectives.

The indicators marked ‘binding’ and the tasks in the field of public services are the government’s commitments to the people. The major binding indicators should be specifically assigned to the relevant departments and all provinces, autonomous regions and municipalities directly under the central government. The tasks on promoting equalisation of basic public services should be achieved mainly by utilisation of public resources by the government, with clearly defined work responsibilities and planned schedule.

2. Strengthen overall policy planning and coordination
... Optimise the structure of fiscal expenditure and government investment, steadily increase the central government’s investment scale, with focus on people’s livelihood and social causes, agriculture and rural areas, science technology and innovation, ecology and environmental protection and resources conservation, and with a bigger proportion devoted to the middle and western regions, former revolutionary base areas, areas inhabited by minority ethnic groups, remote and border areas and poverty-stricken areas.

3. Put into practice comprehensive evaluation and appraisal
Accelerate the development of a performance evaluation and appraisal system and specific appraisal methods that are conducive to advancing scientific development and accelerating transformation of the economic growth mode; weaken the evaluation and appraisal based on the speed of economic growth, while strengthen a comprehensive evaluation and appraisal on fulfilment of the objectives and tasks including structural optimisation, improvement of people’s livelihood, resources conservation, environmental protection, basic public services and social management. Results of the appraisal will be used as importance basis for change of government leadership at various levels, as well as selection, recruitment, award and punishment of officials.

4. Strengthen monitoring and evaluation of the Plan
Improve the monitoring and evaluation system, enhance capacity building in this regard, strengthen statistics work concerning the service industry, energy-conservation and emission reduction, climate change, labour and employment, income distribution and real estate. Stress the surveillance and analysis on the progress with implementation of the Plan. The relevant departments of the State Council should strengthen evaluation on implementation of the Plan in their respective fields, and be subject to supervision and examination by the National People’s Congress and its Standing Committee. The competent authority assuming responsibilities under the Plan should conduct evaluation on fulfilment of the binding and the key expected indicators, submit an annual progress report on implementation of the Plan to the State Council, and release information to the public in an appropriate manner. The State Council will organise a comprehensive mid-term review during implementation of the Plan,
and submit a mid-term evaluation report to the Standing Committee of the National People’s Congress for examination. Should there be a need to make adjustments to the Plan, the State Council should submit an adjustment proposal to the Standing Committee of the National People’s Congress for approval.

Chapter 62: Strengthen the coordinated management

… Improve an implementation mechanism featuring clear responsibilities, categorised implementation and effective supervision.

The relevant departments of the State Council should organise compilation of a set of national-level special plans, in particular key special plans, and specify and put into practice the key tasks set out in the Plan. …

The local plans should effectively implement the national strategic objectives, take into account the local realities and highlight the local characteristics. Make the local plans well coordinated with the development strategies, major objectives and key tasks set out in this Plan, with focus on strengthening their connections with the binding indicators.

Strengthen the connections between the annual plans and this Plan; annual goals should be set towards meeting the major objectives and fully reflect the development objectives and key tasks set out in the Plan. Annual reports should analyse the progress with implementation of this Plan, especially the fulfilment of binding indicators.

“十二五”时期，世情国情继续发生深刻变化，我国经济社会发展呈现新的阶段性特征。综合判断国际国内形势，我国发展仍处于可以大有作为的重要战略机遇期，既面临难得的历史机遇，也面对诸多可以预见和难以预见的风险挑战。我们要增强机遇意识和忧患意识，主动适应环境变化，有效化解各种矛盾，更加奋发有为地推进我国改革开放和社会主义现代化建设。

从国际看，和平、发展、合作仍是时代潮流，世界多极化、经济全球化深入发展，世界经济政治格局出现新变化，科技创新
孕育新突破，国际环境总体上有利于我国和平发展。同时，国际金融危机影响深远，世界经济增长速度减缓，全球需求结构出现明显变化，围绕市场、资源、人才、技术、标准等的竞争更加激烈，气候变化以及能源资源安全、粮食安全等全球性问题更加突出，各种形式的保护主义抬头，我国发展的外部环境更趋复杂。我们必须坚持以更广阔的视野，冷静观察，沉着应对，统筹国内国际两个大局，把握好在全球经济分工中的新定位，积极创造参与国际经济合作和竞争新优势。

从国内看，工业化、信息化、城镇化、市场化、国际化深入发展，人均国民收入稳步增加，经济结构转型加快，市场需求潜力巨大，资金供给充裕，科技和教育整体水平提升，劳动力素质改善，基础设施日益完善，体制活力显著增强，政府宏观调控和应对复杂局面能力明显提高。社会大局保持稳定，我们完全有条件推动经济社会发展和综合国力再上新台阶。同时，必须清醒地看到，我国发展中不平衡、不协调、不可持续问题依然突出，主要是，经济增长的资源环境约束强化，投资和消费关系失衡，收入分配差距较大，科技创新能力不强，产业结构不合理，农业基础仍然薄弱，城乡区域发展不协调，就业总量压力和结构性矛盾并存，物价上涨压力加大，社会矛盾明显增多，制约科学发展的体制机制障碍依然较多。我们必须科学判断和准确把握发展趋势，充分利用各种有利条件，加快解决突出矛盾和问题，集中力量办好自己的事情。
第二章 指导思想

高举中国特色社会主义伟大旗帜，以邓小平理论和“三个代表”重要思想为指导，深入贯彻落实科学发展观，适应国内外形势新变化，顺应各族人民过上更好生活新期待，以科学发展为主题，以加快转变经济发展方式为主线，深化改革开放，保障和改善民生，巩固和扩大应对国际金融危机冲击成果，促进经济长期平稳较快发展和社会和谐稳定，为全面建成小康社会打下具有决定性意义的基础。

以科学发展为主题，是时代的要求，关系改革开放和现代化建设全局。我国仍处于并将长期处于社会主义初级阶段，发展仍是解决我国所有问题的关键。坚持发展是硬道理的本质要求，就是坚持科学发展。以加快转变经济发展方式为主线，是推动科学发展的必由之路，是我国经济社会领域的一场深刻变革，是综合性、系统性、战略性的转变，必须贯穿经济社会发展全过程和各领域，在发展中促转变，在转变中谋发展。今后五年，要确保科学发展取得新的显著进步，确保转变经济发展方式取得实质性进展。基本要求是：

——坚持把经济结构战略性调整作为加快转变经济发展方式的主攻方向。构建扩大内需长效机制，促进经济增长向依靠消费、投资、出口协调拉动转变。加强农业基础地位，提升制造业核心竞争力，发展战略性新兴产业，加快发展服务业，促进经济增长向依靠第一、第二、第三产业协同带动转变。统筹城乡发展，
积极稳妥推进城镇化，加快推进社会主义新农村建设，促进区域
良性互动、协调发展。

——坚持把科技进步和创新作为加快转变经济发展方式的
重要支撑。深入实施科教兴国战略和人才强国战略，充分发挥科
技第一生产力和人才第一资源作用，提高教育现代化水平，增强
自主创新能力，壮大创新人才队伍，推动发展向主要依靠科技进步、
劳动者素质提高、管理创新转变，加快建设创新型国家。

——坚持把保障和改善民生作为加快转变经济发展方式的
根本出发点和落脚点。完善保障和改善民生的制度安排，把促进
就业放在经济社会发展优先位置，加快发展各项社会事业，推进
基本公共服务均等化，加大收入分配调节力度，坚定不移走共同
富裕道路，使发展成果惠及全体人民。

——坚持把建设资源节约型、环境友好型社会作为加快转变
经济发展方式的重要着力点。深入贯彻节约资源和保护环境基本
国策，节约能源，降低温室气体排放强度，发展循环经济，推广
低碳技术，积极应对全球气候变化，促进经济社会发展与人口资
源环境相协调，走可持续发展之路。
