INSTRUCTIONS

Why you have been asked to fill out this questionnaire?

The Anti-Dumping Commission (the Commission) is conducting an accelerated review of anti-dumping and countervailing measures currently applying to certain grinding balls exported to Australia from The People's Republic of China (China).

The Commission will use the information you provide to determine normal values and export prices over the accelerated review period (the period) [1 October 2020 to 30 September 2021].

This information will determine whether certain grinding balls (grinding balls) are dumped. The Commission will also use this information to determine whether certain grinding balls have been in receipt of countervailable subsidies over the period.

If you do not manufacture the goods

If you play a role in the export of the goods but do not produce or manufacture the goods (for example, you are a trading company, broker, or vendor dealing in the goods), it is important that you forward a copy of this questionnaire to the relevant manufacturers and inform the Commission of the contact details for these manufacturers **immediately**.

The Commission will still require your company to complete this exporter questionnaire except Section G – Cost to make and sell.

What happens if you do not respond to this questionnaire?

You do not have to complete the questionnaire. However, if you do not respond, do not provide all of the information sought, do not provide information within a reasonable time period, or do not allow the Commission to verify the information, we may deem your company to be an uncooperative exporter. In that case the Commission must determine a dumping margin having regard to all relevant information.

Therefore, it is in your interest to provide a complete and accurate response to this exporter questionnaire, capable of verification.

Extension requests

If you require a longer period to complete your response to this exporter questionnaire, you must submit a request to the Commission, in writing, for an extension to the due date for all or part of the questionnaire. This request must be made prior to the due date. A request for extension will be rejected if received after the due date.

When considering the extension request, the Commission will have regard to:

- the Commission's responsibility to conduct the case in a timely and efficient manner;
- the reasons why you could not provide a response within the whole period and not only the period remaining between the request and the due date;
- ordinary business practices or commercial principles;
- the Commission's understanding of the relevant industry;
- previous correspondence and previous dealings with your company; and
- information provided by other interested parties.

More information on extensions can be found in the Customs (Extension of Time and Non-cooperation) Direction 2015 at <https://www.legislation.gov.au/Details/F2015L01736>.

You will be informed of the decision whether your request for an extension has been rejected, granted in full or granted in part. For example, you may be granted an extension to submit all sections except for Section A or you may be granted a shorter extension than you requested.

OFFICIAL: PUBLIC RECORD

A summary of any requests and grants of extensions to submit a response to this exporter questionnaire will be published in the public record.

Submitting a response to the exporter questionnaire

Responses to the exporter questionnaire should be lodged via SIGBOX, a secure online document repository. Please contact the Commission on the email address listed on the cover page to request access to SIGBOX.

In submitting the response to the exporter questionnaire, you must answer all questions, include all attachments and spreadsheets, and provide a non-confidential version of your response to this exporter questionnaire.

If your response to this exporter questionnaire contains major deficiencies that, in the Commissioner's view, cannot be quickly and easily rectified in a further response, then your company may be considered as an uncooperative exporter.

Confidential and non-confidential responses

You are required to lodge a confidential version (OFFICIAL: Sensitive) and a non-confidential version (for publishing on the public record) of your response to this exporter questionnaire by the due date. Please ensure that *each page* of information you provide is clearly marked either "**OFFICIAL: Sensitive**" or "**PUBLIC RECORD**".

All information provided to the Commission in confidence will be treated accordingly. The public record version of your questionnaire will be placed on the public record, and must contain sufficient detail to allow a reasonable understanding of the substance of the information without breaching confidentiality.

A person is not required to provide a summary for the public record if the Commission can be satisfied that no such summary can be given that would allow a reasonable understanding of the substance of the information.

All questionnaires are required to have a bracketed explanation of deleted or blacked out information for the public record version of the questionnaire. An example of a statement to accompany deleted/blacked out text is:

[Explanation of cost allocation through the divisions, by reference to machine hours or weight].

If such an explanation is not provided, the Commission may disregard the information in the submission. Where the public record version of your response to the exporter questionnaire does not contain sufficient detail, your company may be requested to resubmit your response with the required level of detail or, if deadlines have passed, the Commission may not have regard to it.

Verification of the information that you supply

The Commission may wish to conduct a verification of your questionnaire response for completeness, relevance and accuracy of the information to your company's records.

The verification is not meant to be a chance for you to provide new or additional information. The Commission expects your response to the questionnaire to be relevant, complete and accurate.

The verification may include Commission staff visiting your company to conduct on onsite verification¹. Any onsite verification typically commences approximately 2 to 4 weeks after the due date of the response to the exporter questionnaire. To assist with the planning of a verification, please contact the Commission as soon as possible for a potential verification date to be scheduled.

¹ The Commission has temporarily suspended onsite verification due to the COVID-19 pandemic (refer to Anti-Dumping Notice No. 2020/29). However, your response to the exporter questionnaire may still be subject to onsite verification should the suspension of onsite verifications be lifted.

The onsite verification is usually conducted over 4 days. However, in complex cases, it may be scheduled over 5 days. A verification will include a detailed examination of your company's records and we will collect copies of relevant documents. The verification will require the participation of key staff, including your financial accountant, production manager and sales staff. A tour of the manufacturing facility may also be required during the verification.

The Commission may elect to undertake an alternative verification methodology, rather than an onsite verification, to satisfy itself of the completeness, relevance and accuracy of the data.

Note that the Commission may disregard any data or information that is not verified, including new or additional information provided after the verification visit.

A report will be prepared following the verification, which details the outcomes of the verification. This report will be placed on the public record and may include the publication of the preliminarily-assessed dumping margin. The Commission considers that the dumping margin is not confidential information, but rather an aggregate figure derived from confidential data.

You will be provided with an opportunity to comment on the accuracy and confidentiality of the verification report prior to its publication on the public record.

For information on the Commission's verification procedures, refer to Anti-Dumping Notice No. 2016/30 available on the Commission's website.

Model Control Code

Details of the model control code (MCC) structure for the goods are detailed in the table below. Export sales data (Section B-2), domestic sales data (Section D-2) and cost to make and sell data (Section G-3, G-4 & G-5) submitted in this response must follow this MCC structure. At a minimum, the data must report sales and cost data separately for each of the mandatory MCC categories identified by the Commission.

Item	Category	Sub-category	Identifier	Sales Data	Cost data	Key Category
1	Production method	Cast	C	Mandatory	Mandatory	Yes
		Forged	F			
2	Diameter	Diameter in mm	### ²	Mandatory	Mandatory	Yes
3	Product Code	Internal grade/model	### ³	Mandatory	Optional	No

In constructing a MCC, use a "-" between each category. For example: For example: C-100-X would indicate cast grinding balls with a 100 mm diameter and grade/model 'X'.

The MCCs will be used to match export models to the identical or comparable domestic models. In addition, the MCCs will be used to determine the profitability of domestic sales in the ordinary course of trade by comparing domestic selling prices to the corresponding cost to make and sell. The MCC may also be used to compare the export price to the cost to make the exported model as part of the constructed normal value.

If there are models manufactured and sold by your company that do not align within the MCC structure above, this should be raised by lodging a submission with the Commission as soon as is practicable, but no later than the time this questionnaire is due, otherwise the response may be considered deficient.

² Use a separate identifier for each diameter, e.g. 25mm, 30mm 35mm etc. The Commission may group certain categories of diameter in formulating a final MCC.

³ The 'product code' category, if applicable, refers to the company's internal identifier for the model, grade or type of the goods, differentiated by the chemical composition of the grinding ball.
