Australian Industry Participation Plan Summary - Project Phase

Nominated project proponent: Sydney Metro

Project details

Name: Sydney Metro Western Sydney Airport

Location: Multiple locations in the Sydney Metropolitan area

Type: Land transport facility

Purpose: Establish new facility

Capital expenditure: \$500 million or more

Description: The Western Sydney Airport line is the new railway line that will service Greater Western Sydney and the new Western Sydney International (Nancy-Bird Walton) Airport. The new railway will become the transport spine for the Western Parkland City's growth for generations to come, connecting communities and travellers with the rest of Sydney's public transport system with a fast, safe and easy metro service. The project consists of:

- Stations at Western Sydney International airport and the Western Sydney Aerotropolis;
- A station at St Marys, interchanging with the existing suburban railway station and connecting customers with the rest of Sydney's rail system;
- New stations at Orchard Hills and Luddenham will service a future commercial and mixed-use precinct, and an education and innovation precinct;
- Fully-automated driverless trains like the rest of the Sydney Metro system with fast, frequent services – customers won't need a timetable, they'll just turn up and go. The Australian and NSW governments have a shared objective of having the metro rail operational when Western Sydney International opens for passenger services.

Completion date: 01 Jan 9999
