Dear Commissioner

Response to the Statement of Essential Facts in Case 691

In my view, price undercutting by Chinese imports means fewer jobs for Australians. I ask for effective final anti-dumping measures that give Australian manufacturers a fair opportunity to compete.

We fabricate AWS aluminium windows and doors locally and supply and install them across Wollongong, the NSW South Coast and Sydney.

Imported prices put pressure on our margins, and we often let jobs go because we cannot compete at an acceptable margin. This has been particularly evident on larger projects. Supporting examples and commercial details are provided in the confidential section.

The price undercutting and margin pressure described in the SEF reflect our experience, particularly on a substantial residential project we lost to imports (SEF 691, pp. 180 and 190).

We also manufacture for Class 2 buildings, including floor-to-ceiling window and door arrangements that we consider to include window wall. A current project example is provided in the confidential section.

A fairer market would allow us to win more work at an acceptable margin. If these conditions continue, we cannot grow the business, and I am concerned that we could ultimately go out of business.

I also have concerns about the testing and product quality of some imported products. Those concerns sit outside the scope of this dumping case. My central concern here is the effect of price undercutting on Australian manufacturing and jobs.
