RE: Anti-Dumping Case 691 – Statement of Essential Facts (SEF 691)

Dear Commissioner

I am writing to provide my business perspective regarding Anti-Dumping Case 691 concerning aluminium windows and doors from China

I operate HIVIZ GLASS & GLAZING 24HRS as a sole trader based in Bucasia Queensland [cite User Summary] My day-to-day work involves glazing, glass repair, and fixing broken components on windows, doors and showerscreens

While my primary focus is repair and maintenance rather than direct manufacturing or tender bidding, my work gives me a direct, hands on view of the flood of cheap imported aluminium products entering our market Everyday, I am called out to deal with poorly manufactured imported rubbish and cheap gear that simply doesn't last. Customers end up with inferior products featuring cheap parts that are completely unrepairable or impossible to source replacements for When these substandard imports fail it creates endless frustration and headaches for local property owners who find themselves stuck with disposable hardware

While quality and compliance issues sit outside the strict scope of a dumping inquiry, the reality is that the influx of cheap, disposable imports damages the market and undermines any notion of a level playing field A fairer competitive environment where local standards and durable

products are valued would make my work significantly easier and reduce the burden of dealing with unrepairable foreign imports.

Ultimately, cheap shit doesn't last and our market needs fair, sustainable conditions that support quality work and genuine longevity.

Yours sincerely,

Simon John Messell
