

REFERENCE MATERIAL PRODUCT INFORMATION SHEET

NMIA D447c: (\pm)-N-Formylamphetamine

Report ID: D447c.2019.04

Chemical Formula: C₁₀H₁₃NO

Molecular Weight: 163.2 g/mol

Property value

Batch No.	CAS No.	Purity by GC-FID
11-D-20	22148-75-0	97.0 %

IUPAC name: N-(1-Phenyl-2-propanyl)formamide

Expiration of certification: The property values are valid till 26 November 2024, i.e. five years from the date of re-certification provided the **unopened** material is handled and stored in accordance with the recommendations below. The material as issued in the unopened container and stored as recommended below should be suitable for use beyond this date, subject to confirmation of batch stability from the issuing body. The expiry date/shelf life does not apply to sample bottles that have been opened. In such cases it is recommended that the end-user conduct their own in-house stability trials.

Description: Clear liquid prepared by synthesis, and certified for identity and purity by NMIA. Packaged in sealed amber glass ampoules.

Intended use: This reference material should be used for qualitative analysis only.

Instructions for use: Equilibrate the bottled material to room temperature before opening.

Recommended storage: When not in use, this material should be stored at or below 4 °C in a closed container in a dry, dark area.

Stability: This material has demonstrated stability over a minimum period of five years. The long-term stability of the compound in solution has not been examined.

Homogeneity assessment: The homogeneity of the material was assessed using purity assay by GC-FID on ten randomly selected 2 mg sub samples of the material. The material was judged to be homogeneous at this level of sampling as the variation in analysis results between samples was not significantly different at a 95% confidence level from that observed on repeat analysis of the same sample.

Safety: Treat as hazardous substance. Use appropriate work practices when handling to avoid skin or eye contact, ingestion or inhalation of dust. Refer to the provided safety data sheet.

Characterisation Report:

This reference material has NOT been extensively quantified by the Chemical Reference Materials team, NMI. This material should be considered for use in qualitative analysis only.

The identity was confirmed by a range of spectroscopic techniques, NMR, IR and MS. The purity value was obtained by mass balance from a combination of traditional analytical techniques, including GC-FID, thermogravimetric analysis, Karl Fischer analysis and ¹H NMR spectroscopy. The purity value is calculated as per Equation 1.

$$\text{Purity} = (100\% - I_{\text{ORG}}) \times (100\% - I_{\text{VOL}} - I_{\text{NVR}}) \quad \text{Equation 1}$$

I_{ORG} = Organic impurities of related structure, I_{VOL} = volatile impurities, I_{NVR} = non-volatile residue

Supporting evidence is provided by elemental microanalysis.

	Carrier:	Helium
	Split ratio:	20/1
	Relative peak area of the main component:	
	Initial analysis:	Mean = 97.0%, s = 0.02% (10 samples in duplicate, February 2012)
	Re-analysis:	Mean = 97.0%, s = 0.02% (7 sub samples in duplicate, March 2013)
	Re-analysis;	Mean = 97.2%, s = 0.01% (5 sub samples in duplicate, February 2014)
	Re-analysis;	Mean = 97.2%, s = 0.03% (6 sub samples in duplicate, January 2017)
	Re-analysis;	Mean = 97.4%, s = 0.04% (5 sub samples in duplicate, November 2019)

Thermogravimetric analysis: The volatile content could not be determined because of the inherent volatility of the material and non-volatile residue < 0.2% mass fraction (February 2012)

Karl Fischer analysis: Moisture content 1.1% mass fraction (February 2012)
 Moisture content 2.5% mass fraction (February 2013)
