

REFERENCE MATERIAL PRODUCT INFORMATION SHEET

NMIA D844: 16 β -HydroxyDHEA

Report ID: D844.2014.02

Chemical Formula: C₁₉H₂₈O₃

Molecular Weight: 304.4 g/mol

Property value

Batch No.	CAS No.	Purity estimate
03-S-14	1159-68-8	99.6%

IUPAC name: (3 β ,16 β)-3,16-Dihydroxyandrost-5-en-17-one

Expiration of certification: The property values are valid till 27 August 2019, i.e. five years from the date of re-certification provided the **unopened** material is handled and stored in accordance with the recommendations below. The material as issued in the unopened container and stored as recommended below should be suitable for use beyond this date, subject to confirmation of batch stability from the issuing body. The expiry date/shelf life does not apply to sample bottles that have been opened. In such cases it is recommended that the end-user conduct their own in-house stability trials.

Description: Off-white powder sourced from an external supplier, and certified for identity and purity by NMIA. Packaged in amber glass bottles with a septum and crimped aluminium cap or screw top cap.

Intended use: This reference material should be used for qualitative analysis only.

Instructions for use: Equilibrate the bottled material to room temperature before opening.

Recommended storage: When not in use this material should be stored at or below 4 °C in a closed container in a dry, dark area.

Stability: This material has demonstrated stability over a minimum period of three years. The long-term stability of the compound in solution has not been examined.

Homogeneity assessment: The homogeneity of the material was assessed using purity assay by HPLC with UV detection on seven randomly selected 1-2 mg sub samples of the material. The material was judged to be sufficiently homogeneous at this level of sampling as the variation in analysis results between samples was not significantly different at a 95% confidence level from that observed on repeat analysis of the same sample.

Safety: Treat as a hazardous substance. Use appropriate work practices when handling to avoid skin or eye contact, ingestion or inhalation of dust. Refer to the provided safety data sheet.

Characterisation Report:

The identity was confirmed by a range of spectroscopic techniques, NMR, IR and MS. Impurities of related structure were assessed by HPLC with UV detection. The purity value was obtained by mass balance from a combination of traditional analytical techniques, including HPLC with UV detection. The purity value is calculated as per Equation 1.

$$\text{Purity} = (100 \% - I_{\text{ORG}}) \times (100 \% - I_{\text{VOL}} - I_{\text{NVR}}) \quad \text{Equation 1}$$

I_{ORG} = Organic impurities of related structure, I_{VOL} = volatile impurities, I_{NVR} = non-volatile residue.

Supporting evidence is provided by thermogravimetric analysis, Karl Fischer analysis and ^1H NMR spectroscopy and elemental microanalysis.

HPLC: Instrument: Waters Model 1525 pump, 717 plus autosampler
 Column: Alltech Alltima C-18, 5 μm (4.6 mm x 150 mm)
 Column oven: Ambient
 Mobile Phase: Acetonitrile/MilliQ water (35:65 v/v) Flow rate: 1.0 mL/min
 Detector: Waters 2998 PDA operating at 200 nm

Relative peak area of the main component:

Initial analysis: Mean = 99.8%, s = 0.02% (7 sub samples in duplicate, February 2004)
 Re-analysis: Mean = 99.8%, s = 0.02% (5 sub samples in duplicate, August 2008)
