

DEUTERATED INTERNAL STANDARD PRODUCT INFORMATION SHEET

NMIA D898b: d₄-Norandrosterone-β-glucuronide (sodium salt)

Report ID: D898b.2020.01 (Ampouled 200213)

Chemical Formula: C₂₄H₃₁D₄O₈Na

Molecular Weight: 478.5 g/mol

Property value

Batch No.	CAS No.	Mass per ampoule
18-S-05	Not available	892 µg

IUPAC name: 2,2,4,4-d₄-(3α,5α)-17-Oxoestrane-3-yl β-D-glucopyranosiduronic acid sodium salt.

Expiration of certification: The property values are valid till 20 February 2023, i.e. three years from the date of certification provided the **unopened** material is handled and stored in accordance with the recommendations below. The material as issued in the unopened container and stored as recommended below should be suitable for use beyond this date, subject to confirmation of batch stability from the issuing body. The shelf life does not apply to ampoules that have been opened. In such cases it is recommended that the end-user conduct their own in-house stability trials.

Description: The compound is supplied as a dried aliquot in a sealed ampoule under an atmosphere of argon. The deuterated internal standard is intended for a single use to prepare a standard solution containing D898b. The material was prepared by synthesis and certified for identity and purity by NMIA. The main component of this material is d₄-norandrosterone-β-glucuronide sodium salt. d₃-, d₂-, d₁- and d₀- Norandrosterone-β-glucuronide sodium salt are also present. The stated mass of the analyte per ampoule represents the approximate combined masses of deuterated (d₄, d₃, d₂ and d₁) and d₀- norandrosterone-β-glucuronide sodium salt in the material.

Intended use: The isotopic purity of this material is an estimate only. This material should be considered for use as an internal standard only.

Instructions for use: Open the ampoule and carefully rinse the interior at least three times with a suitable organic solvent (e.g. Acetonitrile:MiliQ water(1:1)). This will transfer approximately 892 µg of anhydrous norandrosterone-β-glucuronide sodium salt (d₄, d₃, d₂, d₁ and d₀). The mass of analyte in each ampoule is calculated from the assigned purity of the bulk and the concentration of bulk material in a stock solution used to prepare the ampoules.

Recommended storage: When not in use, this material should be stored at or below 4 °C in a closed container in a dry, dark area.

Stability: The long-term stability of the compound in solution has not been examined.

Homogeneity assessment: The homogeneity of the material was assessed using purity assay by HPLC with ELS detection on seven randomly selected ampoules of the material. The material was judged to be sufficiently homogeneous at this level of sampling as the variation in analysis results between samples was not significantly different at a 95% confidence level from that observed on repeat analysis of the same sample.

Safety: Treat as a hazardous substance. Use appropriate work practices when handling to avoid skin or eye contact, ingestion or inhalation of dust. Refer to the provided safety data sheet.

The following analytical data was obtained on the bulk material subsequently used in the preparation of the ampoules.

The identity was confirmed by a range of spectroscopic techniques, NMR, IR and MS. The purity value was obtained by mass balance from a combination of traditional analytical techniques, including HPLC with ELS detection, thermogravimetric analysis, Karl Fischer analysis and ¹H NMR spectroscopy. The purity value is calculated as per Equation 1.

$$\text{Purity} = (100 \% - I_{\text{ORG}}) \times (100 \% - I_{\text{VOL}} - I_{\text{NVR}}) \quad \text{Equation 1}$$

I_{ORG} = Organic impurities of related structure, I_{VOL} = volatile impurities, I_{NVR} = non-volatile residue.

Supporting evidence is provided by qualitative elemental microanalysis.

The main component of this material is d₄-norandrosterone-β-glucuronide sodium salt. d₃-, d₂-, d₁- and d₀-Norandrosterone-β-glucuronide sodium salt are also present. The stated chemical purity of the analyte represents the combined mass fractions of deuterated (d₄, d₃, d₂ and d₁) and d₀-norandrosterone-β-glucuronide sodium salt in the material.

The isotopic purity of this material is an estimate only. This material should be considered for use as an internal standard only.

Isotopic Purity: $d_4 \approx 81\% \quad [= d_4 / (d_4 + d_3 + d_2 + d_1 + d_0) \times 100]$
 $d_0 < 0.3\% \quad [= d_0 / (d_4 + d_3 + d_2 + d_1 + d_0) \times 100]$
