

DEUTERATED INTERNAL STANDARD PRODUCT INFORMATION SHEET

NMIA S001: d₄-[1,16,16,17]-Epitestosterone

Report ID: S001.2018.02 (Ampouled 170706)

Chemical Formula: C₁₉H₂₄D₄O₂

Molecular Weight: 292.5 g/mol

Property value

Batch No.	CAS No.	Mass per ampoule
09-S-05	Not available	978 µg

IUPAC name: (17β)-17-Hydroxy(1,16,16,17-²H₄)androst-4-en-3-one.

Expiration of certification: The property values are valid till 20 June 2023, i.e. five years from the date of certification provided the **unopened** material is handled and stored in accordance with the recommendations below. The material as issued in the unopened container and stored as recommended below should be suitable for use beyond this date, subject to confirmation of batch stability from the issuing body. The shelf life does not apply to ampoules that have been opened. In such cases it is recommended that the end-user conduct their own in-house stability trials.

Description: The compound is supplied as a dried aliquot in a sealed ampoule under an atmosphere of argon. The CRM is intended for a single use to prepare a standard solution containing S001. The material was prepared by synthesis, and certified for identity and purity by NMIA.

Intended use: The isotopic purity of this material is an estimate only. This material should be considered for use as an internal standard only.

Instructions for use: Open the ampoule and carefully rinse the interior at least three times with a suitable organic solvent (e.g. chloroform). This will transfer approximately 978 µg of anhydrous d₄-[1,16,16,17]-epitestosterone (d₄, d₃, d₂, d₁ and d₀). The mass of analyte in each ampoule is calculated from the assigned purity of the bulk and the concentration of bulk material in a stock solution used to prepare the ampoules.

Recommended storage: When not in use, this material should be stored at or below 4 °C in a closed container in a dry, dark area.

Stability: The long-term stability of the compound in solution has not been examined.

Homogeneity assessment: The homogeneity of the material was assessed using purity assay by GC-FID on ten randomly selected ampoules of the material. The material was judged to be sufficiently homogeneous at this level of sampling as the variation in analysis results between samples was not significantly different at a 95% confidence level from that observed on repeat analysis of the same sample.

Safety: Treat as a hazardous substance. Use appropriate work practices when handling to avoid skin or eye contact, ingestion or inhalation of dust. Refer to the provided safety data sheet.

Characterisation Report:

GC-FID: Instrument: Agilent 6890
 Column: HP-1, 30 m × 0.32 mm I.D. × 0.25 μm
 Program: 180 °C (1 min), 30 °C/min to 240 °C (10 min), 30 °C/min to 300 °C (3 min)
 Injector: 250 °C
 Detector Temp: 320 °C
 Carrier: Helium
 Split ratio: 20/1
 Relative peak area of main component:
 Initial analysis: Mean = 98.1%, s = 0.02% (5 ampoules in duplicate, July 2017)
 Re-analysis: Mean = 98.4%, s = 0.02% (5 ampoules in duplicate, June 2018)

The following analytical data was obtained on the bulk material subsequently used in the preparation of the ampoules.

The identity was confirmed by a range of spectroscopic techniques, NMR, IR and MS. The purity value was obtained by mass balance from a combination of traditional analytical techniques, including GC-FID, thermogravimetric analysis, Karl Fischer analysis and ¹H NMR spectroscopy. The purity value is calculated as per Equation 1.

$$\text{Purity} = (100\% - I_{\text{ORG}}) \times (100\% - I_{\text{VOL}} - I_{\text{NVR}}) \quad \text{Equation 1}$$

I_{ORG} = Organic impurities of related structure, I_{VOL} = volatile impurities, I_{NVR} = non-volatile residue.

Supporting evidence is provided by qualitative headspace GC-MS analysis of occluded solvents and elemental microanalysis.

The main component of this material is d₄-[1,16,16,17]-epitestosterone. d₃-, d₂-, d₁- and d₀- epitestosterone are also present. The stated chemical purity of the analyte represents the combined mass fractions of deuterated (d₄, d₃, d₂ and d₁) and d₀-epitestosterone in the material.

The isotopic purity of this material is an estimate only. This material should be considered for use as an internal standard only.

Isotopic Purity: d₄ ≈ 92.8% [= d₄/(d₄ + d₃ + d₂ + d₁ + d₀) × 100]
 d₀ < 0.2% [= d₀/(d₄ + d₃ + d₂ + d₁ + d₀) × 100]

GC-FID: Instrument: Agilent 6890
 Column: HP-1, 30 m × 0.32 mm I.D. × 0.25 μm
 Program: 180 °C (1 min), 30 °C/min to 240 °C (10 min), 30 °C/min to 300 °C (2 min)
 Injector: 250 °C
 Detector Temp: 320 °C
 Carrier: Helium
 Split ratio: 20/1
 Relative peak area of main component:
 Initial analysis: Mean = 98.4%, s = 0.06% (10 sub samples in duplicate, December 2009)
 Re-analysis: Mean = 98.4%, s = 0.1% (5 sub samples in duplicate, November 2012)

GC-FID: Instrument: Varian CP-3800
 Column: VF-1MS, 30 m × 0.32 mm I.D. × 0.25 μm
 Program: 180 °C (1 min), 30 °C/min to 240 °C (10 min), 30 °C to 300 (2 min)
 Injector: 250 °C
 Detector Temp: 320 °C
 Carrier: Helium
 Split ratio: 20/1
 Relative peak area of main component:
 Initial analysis: Mean = 98.4%, s = 0.05 (10 sub samples in duplicate, December 2009)

GC-FID: Instrument: Varian CP-3800
 Column: HP-5, 30 m × 0.32 mm I.D. × 0.25 μm
 Program: 180 °C (1 min), 30 °C/min to 240 °C (10 min), 30 °C to 300 (2 min)
 Injector: 250 °C
 Detector Temp: 320 °C
 Carrier: Helium
 Split ratio: 20/1
 Relative peak area of main component:
 Initial analysis: Mean = 98.3%, s = 0.06 (10 sub samples in duplicate, December 2009)

Thermogravimetric analysis: N/A

Karl Fischer analysis: Moisture content < 0.3% mass fraction (December 2009 and November 2012)
